FVP_VE_Cortex_A5x1.motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x1.motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x1.motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x1.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x1.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x1.periph_clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

15.13 FVP_VE_Cortex-A5x2

List of instances in FVP_VE_Cortex-A5x2.

FVP_VE_Cortex-A5x2 instances

FVP_VE_Cortex_A5x2

Top level component of the Cortex-A5x2 Versatile Express inspired model.

Type: [FVP_VE_Cortex_A5x2](#).

FVP_VE_Cortex_A5x2.cluster

ARM CORTEXA5MP Cluster CT model.

Type: [Cluster_ARM_Cortex-A5MP](#).

FVP_VE_Cortex_A5x2.cluster.cpu0

ARM CORTEXA5MP CT model.

Type: [ARM_Cortex-A5MP](#).

FVP_VE_Cortex_A5x2.cluster.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A5x2.cluster.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A5x2.cluster.cpu0.utlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A5x2.cluster.cpu1

ARM CORTEXA5MP CT model.

Type: [ARM_Cortex-A5MP](#).

FVP_VE_Cortex_A5x2.cluster.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A5x2.cluster.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A5x2.cluster.cpu1.utlb

TLB - instruction, data or unified.

Type: [Tlbcadi](#).

FVP_VE_Cortex_A5x2.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

FVP_VE_Cortex_A5x2.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x2.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x2.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x2.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A5x2.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A5x2.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A5x2.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_VE_Cortex_A5x2.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_VE_Cortex_A5x2.daughterboard.hdlcd.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x2.daughterboard.hdlcd.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x2.daughterboard.hdlcd.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x2.daughterboard.hdlcd.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x2.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_A5x2.daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A5x2.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x2.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A5x2.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A5x2.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x2.daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A5x2.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x2.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_VE_Cortex_A5x2.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

FVP_VE_Cortex_A5x2.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A5x2.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A5x2.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A5x2.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A5x2.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A5x2.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A5x2.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A5x2.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x2.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x2.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x2.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A5x2.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A5x2.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A5x2.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A5x2.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A5x2.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A5x2.motherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x2.motherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x2.motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x2.motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x2.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x2.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A5x2.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x2.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x2.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x2.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x2.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A5x2.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x2.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x2.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x2.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x2.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A5x2.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A5x2.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A5x2.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A5x2.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x2.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x2.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x2.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x2.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A5x2.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A5x2.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x2.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x2.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x2.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x2.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_A5x2.motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x2.motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x2.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x2.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x2.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x2.motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_A5x2.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A5x2.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x2.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x2.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x2.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x2.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A5x2.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A5x2.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A5x2.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A5x2.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A5x2.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A5x2.motherboard.virtio_blockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A5x2.motherboard.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A5x2.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A5x2.motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A5x2.motherboard.vis.recorder.playbackDivider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.vis.recorder.playbackTimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x2.motherboard.vis.recorder.playbackTimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x2.motherboard.vis.recorder.playbackTimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x2.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x2.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x2.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x2.periph_clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

15.14 FVP_VE_Cortex-A5x4

List of instances in FVP_VE_Cortex-A5x4.

FVP_VE_Cortex-A5x4 instances

FVP_VE_Cortex_A5x4

Top level component of the Cortex-A5x4 Versatile Express inspired model.

Type: [FVP_VE_Cortex_A5x4](#).

FVP_VE_Cortex_A5x4.cluster

ARM CORTEXA5MP Cluster CT model.

Type: [cluster_ARM_Cortex-A5MP](#).

FVP_VE_Cortex_A5x4.cluster.cpu0

ARM CORTEXA5MP CT model.

Type: [ARM_Cortex-A5MP](#).

FVP_VE_Cortex_A5x4.cluster.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A5x4.cluster.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A5x4.cluster.cpu0.utlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A5x4.cluster.cpu1

ARM CORTEXA5MP CT model.

Type: [ARM_Cortex-A5MP](#).**FVP_VE_Cortex_A5x4.cluster.cpu1.l1dcache**

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A5x4.cluster.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A5x4.cluster.cpu1.utlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A5x4.cluster.cpu2

ARM CORTEXA5MP CT model.

Type: [ARM_Cortex-A5MP](#).**FVP_VE_Cortex_A5x4.cluster.cpu2.l1dcache**

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A5x4.cluster.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A5x4.cluster.cpu2.utlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A5x4.cluster.cpu3

ARM CORTEXA5MP CT model.

Type: [ARM_Cortex-A5MP](#).**FVP_VE_Cortex_A5x4.cluster.cpu3.l1dcache**

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A5x4.cluster.cpu3.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A5x4.cluster.cpu3.utlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A5x4.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

FVP_VE_Cortex_A5x4.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x4.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x4.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x4.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A5x4.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A5x4.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A5x4.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_VE_Cortex_A5x4.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_VE_Cortex_A5x4.daughterboard.hdlcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x4.daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x4.daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x4.daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x4.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_A5x4.daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A5x4.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x4.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A5x4.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A5x4.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x4.daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A5x4.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x4.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_VE_Cortex_A5x4.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

FVP_VE_Cortex_A5x4.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A5x4.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A5x4.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A5x4.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A5x4.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A5x4.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A5x4.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A5x4.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x4.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x4.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x4.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A5x4.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A5x4.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A5x4.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A5x4.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A5x4.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A5x4.motherboard.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x4.motherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x4.motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x4.motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x4.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x4.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A5x4.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x4.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x4.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x4.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x4.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A5x4.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x4.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x4.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x4.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x4.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A5x4.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A5x4.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A5x4.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A5x4.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x4.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A5x4.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A5x4.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x4.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x4.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x4.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x4.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_A5x4.motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x4.motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x4.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x4.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x4.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x4.motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_A5x4.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A5x4.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x4.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x4.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x4.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x4.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A5x4.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A5x4.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A5x4.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A5x4.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A5x4.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A5x4.motherboard.virtioblockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A5x4.motherboard.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A5x4.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A5x4.motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A5x4.motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x4.motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x4.motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x4.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x4.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x4.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x4.periph_clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

15.15 FVP_VE_Cortex-A7x1

List of instances in FVP_VE_Cortex-A7x1.

FVP_VE_Cortex-A7x1 instances

FVP_VE_Cortex_A7x1

Top level component of the Cortex_A7x1 Versatile Express inspired model.

Type: [FVP_VE_Cortex_A7x1](#).

FVP_VE_Cortex_A7x1.cluster

ARM Cortex-A7 Cluster CT model.

Type: [Cluster_ARM_Cortex-A7](#).

FVP_VE_Cortex_A7x1.cluster.cpu0

ARM Cortex-A7 CT model.

Type: [ARM_Cortex-A7](#).

FVP_VE_Cortex_A7x1.cluster.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A7x1.cluster.cpu0.itlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A7x1.cluster.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A7x1.cluster.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A7x1.cluster.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A7x1.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

FVP_VE_Cortex_A7x1.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x1.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x1.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x1.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A7x1.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A7x1.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A7x1.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_VE_Cortex_A7x1.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLC](#).

FVP_VE_Cortex_A7x1.daughterboard.hdlcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x1.daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x1.daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x1.daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x1.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_A7x1.daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A7x1.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x1.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A7x1.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A7x1.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x1.daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A7x1.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x1.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_VE_Cortex_A7x1.globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_VE_Cortex_A7x1.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

FVP_VE_Cortex_A7x1.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A7x1.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A7x1.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A7x1.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A7x1.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A7x1.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A7x1.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A7x1.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x1.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x1.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x1.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A7x1.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A7x1.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A7x1.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A7x1.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A7x1.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A7x1.motherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x1.motherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x1.motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x1.motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x1.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x1.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A7x1.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x1.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x1.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x1.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x1.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A7x1.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x1.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x1.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x1.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x1.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A7x1.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A7x1.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A7x1.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A7x1.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x1.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A7x1.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A7x1.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x1.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x1.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x1.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x1.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_A7x1.motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x1.motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x1.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x1.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x1.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x1.motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_A7x1.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A7x1.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x1.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x1.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x1.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x1.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A7x1.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A7x1.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A7x1.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A7x1.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A7x1.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A7x1.motherboard.virtioBlockDevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A7x1.motherboard.virtioP9Device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A7x1.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A7x1.motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A7x1.motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x1.motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x1.motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x1.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x1.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x1.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

15.16 FVP_VE_Cortex-A7x2

List of instances in FVP_VE_Cortex-A7x2.

FVP_VE_Cortex-A7x2 instances

FVP_VE_Cortex_A7x2

Top level component of the Cortex_A7x2 Versatile Express inspired model.

Type: [FVP_VE_Cortex_A7x2](#).

FVP_VE_Cortex_A7x2.cluster

ARM Cortex-A7 Cluster CT model.

Type: [Cluster_ARM_Cortex-A7](#).

FVP_VE_Cortex_A7x2.cluster.cpu0

ARM Cortex-A7 CT model.

Type: [ARM_Cortex-A7](#).

FVP_VE_Cortex_A7x2.cluster.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A7x2.cluster.cpu0.itlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A7x2.cluster.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A7x2.cluster.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A7x2.cluster.cpu1

ARM Cortex-A7 CT model.

Type: [ARM_Cortex-A7](#).

FVP_VE_Cortex_A7x2.cluster.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A7x2.cluster.cpu1.itlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A7x2.cluster.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A7x2.cluster.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A7x2.cluster.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A7x2.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

FVP_VE_Cortex_A7x2.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x2.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x2.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x2.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A7x2.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A7x2.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A7x2.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_VE_Cortex_A7x2.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_VE_Cortex_A7x2.daughterboard.hdlcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x2.daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x2.daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x2.daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x2.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_A7x2.daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A7x2.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x2.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A7x2.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A7x2.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x2.daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A7x2.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x2.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_VE_Cortex_A7x2.globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_VE_Cortex_A7x2.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

FVP_VE_Cortex_A7x2.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A7x2.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A7x2.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A7x2.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A7x2.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A7x2.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A7x2.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A7x2.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x2.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x2.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x2.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A7x2.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A7x2.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A7x2.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A7x2.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A7x2.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A7x2.motherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x2.motherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x2.motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x2.motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x2.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x2.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A7x2.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x2.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x2.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x2.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x2.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A7x2.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x2.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x2.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x2.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x2.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A7x2.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A7x2.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A7x2.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A7x2.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x2.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x2.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x2.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x2.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A7x2.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A7x2.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x2.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x2.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x2.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x2.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_A7x2.motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x2.motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x2.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x2.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x2.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x2.motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_A7x2.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A7x2.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x2.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x2.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x2.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x2.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A7x2.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A7x2.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A7x2.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A7x2.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A7x2.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A7x2.motherboard.virtio_blockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A7x2.motherboard.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A7x2.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A7x2.motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A7x2.motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x2.motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x2.motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x2.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x2.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x2.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

15.17 FVP_VE_Cortex-A7x4

List of instances in FVP_VE_Cortex-A7x4.

FVP_VE_Cortex-A7x4 instances

FVP_VE_Cortex_A7x4

Top level component of the Cortex_A7x3 Versatile Express inspired model.

Type: [FVP_VE_Cortex_A7x4](#).

FVP_VE_Cortex_A7x4.cluster

ARM Cortex-A7 Cluster CT model.

Type: [Cluster_ARM_Cortex-A7](#).

FVP_VE_Cortex_A7x4.cluster.cpu0

ARM Cortex-A7 CT model.

Type: [ARM_Cortex-A7](#).

FVP_VE_Cortex_A7x4.cluster.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A7x4.cluster.cpu0.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A7x4.cluster.cpu0.l1dcache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A7x4.cluster.cpu0.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A7x4.cluster.cpu1

ARM Cortex-A7 CT model.

Type: [ARM_Cortex-A7](#).**FVP_VE_Cortex_A7x4.cluster.cpu1.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A7x4.cluster.cpu1.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A7x4.cluster.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A7x4.cluster.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A7x4.cluster.cpu2

ARM Cortex-A7 CT model.

Type: [ARM_Cortex-A7](#).**FVP_VE_Cortex_A7x4.cluster.cpu2.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A7x4.cluster.cpu2.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A7x4.cluster.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A7x4.cluster.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A7x4.cluster.cpu3

ARM Cortex-A7 CT model.

Type: [ARM_Cortex-A7](#).

FVP_VE_Cortex_A7x4.cluster.cpu3.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A7x4.cluster.cpu3.itlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A7x4.cluster.cpu3.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A7x4.cluster.cpu3.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A7x4.cluster.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A7x4.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

FVP_VE_Cortex_A7x4.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x4.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x4.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x4.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A7x4.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A7x4.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A7x4.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_VE_Cortex_A7x4.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_VE_Cortex_A7x4.daughterboard.hdlcd.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x4.daughterboard.hdlcd.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x4.daughterboard.hdlcd.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x4.daughterboard.hdlcd.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x4.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_A7x4.daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A7x4.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x4.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A7x4.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A7x4.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x4.daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A7x4.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x4.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_VE_Cortex_A7x4.globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_VE_Cortex_A7x4.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

FVP_VE_Cortex_A7x4.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A7x4.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A7x4.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A7x4.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A7x4.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A7x4.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A7x4.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A7x4.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x4.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x4.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x4.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A7x4.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A7x4.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A7x4.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A7x4.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A7x4.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A7x4.motherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x4.motherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x4.motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x4.motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x4.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x4.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A7x4.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x4.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x4.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x4.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x4.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A7x4.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x4.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x4.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x4.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x4.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A7x4.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A7x4.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A7x4.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A7x4.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x4.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A7x4.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A7x4.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x4.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x4.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x4.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x4.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_A7x4.motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x4.motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x4.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x4.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x4.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A7x4.motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_A7x4.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A7x4.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x4.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x4.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x4.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x4.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A7x4.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A7x4.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A7x4.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A7x4.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A7x4.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A7x4.motherboard.virtio_blockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A7x4.motherboard.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A7x4.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A7x4.motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A7x4.motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A7x4.motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A7x4.motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A7x4.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A7x4.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A7x4.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

15.18 FVP_VE_Cortex-A9x1

List of instances in FVP_VE_Cortex-A9x1.

FVP_VE_Cortex-A9x1 instances

FVP_VE_Cortex_A9x1

Top level component of the Cortex-A9x1 Versatile Express inspired model.

Type: [FVP_VE_Cortex_A9x1](#).

FVP_VE_Cortex_A9x1.cluster

ARM CORTEXA9MP Cluster CT model.

Type: [Cluster_ARM_Cortex-A9MP](#).

FVP_VE_Cortex_A9x1.cluster.cpu0

ARM CORTEXA9MP CT model.

Type: [ARM_Cortex-A9MP](#).

FVP_VE_Cortex_A9x1.cluster.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A9x1.cluster.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A9x1.cluster.cpu0.utlb

TLB - instruction, data or unified.

Type: [Tlbcadi](#).

FVP_VE_Cortex_A9x1.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

FVP_VE_Cortex_A9x1.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x1.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x1.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x1.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A9x1.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A9x1.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A9x1.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_VE_Cortex_A9x1.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_VE_Cortex_A9x1.daughterboard.hdlcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x1.daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x1.daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x1.daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x1.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_A9x1.daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A9x1.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x1.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A9x1.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A9x1.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x1.daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A9x1.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x1.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_VE_Cortex_A9x1.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

FVP_VE_Cortex_A9x1.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A9x1.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A9x1.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A9x1.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A9x1.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A9x1.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A9x1.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A9x1.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x1.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x1.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x1.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A9x1.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A9x1.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A9x1.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A9x1.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A9x1.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A9x1.motherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x1.motherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x1.motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x1.motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x1.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x1.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A9x1.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x1.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x1.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x1.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x1.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A9x1.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x1.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x1.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x1.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x1.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A9x1.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A9x1.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A9x1.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A9x1.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x1.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A9x1.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A9x1.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x1.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x1.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x1.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x1.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_A9x1.motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x1.motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x1.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x1.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x1.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x1.motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_A9x1.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A9x1.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x1.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x1.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x1.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x1.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A9x1.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A9x1.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A9x1.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A9x1.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A9x1.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A9x1.motherboard.virtioBlockDevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A9x1.motherboard.virtioP9Device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A9x1.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A9x1.motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A9x1.motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x1.motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x1.motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x1.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x1.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x1.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x1.periph_clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

15.19 FVP_VE_Cortex-A9x2

List of instances in FVP_VE_Cortex-A9x2.

FVP_VE_Cortex-A9x2 instances

FVP_VE_Cortex_A9x2

Top level component of the Cortex-A9x2 Versatile Express inspired model.

Type: [FVP_VE_Cortex_A9x2](#).

FVP_VE_Cortex_A9x2.cluster

ARM CORTEXA9MP Cluster CT model.

Type: [Cluster_ARM_Cortex-A9MP](#).

FVP_VE_Cortex_A9x2.cluster.cpu0

ARM CORTEXA9MP CT model.

Type: [ARM_Cortex-A9MP](#).

FVP_VE_Cortex_A9x2.cluster.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A9x2.cluster.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A9x2.cluster.cpu0.utlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A9x2.cluster.cpu1

ARM CORTEXA9MP CT model.

Type: [ARM_Cortex-A9MP](#).

FVP_VE_Cortex_A9x2.cluster.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A9x2.cluster.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A9x2.cluster.cpu1.utlb

TLB - instruction, data or unified.

Type: [Tlbcadi](#).

FVP_VE_Cortex_A9x2.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

FVP_VE_Cortex_A9x2.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x2.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x2.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x2.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A9x2.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A9x2.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A9x2.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_VE_Cortex_A9x2.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_VE_Cortex_A9x2.daughterboard.hdlcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x2.daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x2.daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x2.daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x2.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_A9x2.daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A9x2.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x2.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A9x2.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A9x2.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x2.daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A9x2.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x2.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_VE_Cortex_A9x2.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

FVP_VE_Cortex_A9x2.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A9x2.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A9x2.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A9x2.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A9x2.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A9x2.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A9x2.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A9x2.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x2.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x2.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x2.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A9x2.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A9x2.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A9x2.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A9x2.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A9x2.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A9x2.motherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x2.motherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x2.motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x2.motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x2.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x2.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A9x2.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x2.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x2.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x2.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x2.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A9x2.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x2.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x2.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x2.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x2.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A9x2.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A9x2.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A9x2.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A9x2.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x2.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x2.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x2.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x2.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A9x2.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A9x2.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x2.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x2.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x2.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x2.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_A9x2.motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x2.motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x2.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x2.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x2.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x2.motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_A9x2.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A9x2.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x2.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x2.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x2.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x2.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A9x2.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A9x2.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A9x2.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A9x2.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A9x2.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A9x2.motherboard.virtio_blockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A9x2.motherboard.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A9x2.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A9x2.motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A9x2.motherboard.vis.recorder.playbackDivider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.vis.recorder.playbackTimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x2.motherboard.vis.recorder.playbackTimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x2.motherboard.vis.recorder.playbackTimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x2.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x2.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x2.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x2.periph_clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

15.20 FVP_VE_Cortex-A9x4

List of instances in FVP_VE_Cortex-A9x4.

FVP_VE_Cortex-A9x4 instances

FVP_VE_Cortex_A9x4

Top level component of the Cortex-A9x4 Versatile Express inspired model.

Type: [FVP_VE_Cortex_A9x4](#).

FVP_VE_Cortex_A9x4.cluster

ARM CORTEXA9MP Cluster CT model.

Type: [Cluster_ARM_Cortex-A9MP](#).

FVP_VE_Cortex_A9x4.cluster.cpu0

ARM CORTEXA9MP CT model.

Type: [ARM_Cortex-A9MP](#).

FVP_VE_Cortex_A9x4.cluster.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A9x4.cluster.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A9x4.cluster.cpu0.utlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A9x4.cluster.cpu1

ARM CORTEXA9MP CT model.

Type: [ARM_Cortex-A9MP](#).**FVP_VE_Cortex_A9x4.cluster.cpu1.l1dcache**

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A9x4.cluster.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A9x4.cluster.cpu1.utlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A9x4.cluster.cpu2

ARM CORTEXA9MP CT model.

Type: [ARM_Cortex-A9MP](#).**FVP_VE_Cortex_A9x4.cluster.cpu2.l1dcache**

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A9x4.cluster.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A9x4.cluster.cpu2.utlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A9x4.cluster.cpu3

ARM CORTEXA9MP CT model.

Type: [ARM_Cortex-A9MP](#).**FVP_VE_Cortex_A9x4.cluster.cpu3.l1dcache**

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A9x4.cluster.cpu3.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A9x4.cluster.cpu3.utlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A9x4.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

FVP_VE_Cortex_A9x4.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x4.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x4.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x4.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A9x4.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A9x4.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A9x4.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_VE_Cortex_A9x4.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_VE_Cortex_A9x4.daughterboard.hdlcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x4.daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x4.daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x4.daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x4.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_A9x4.daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A9x4.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x4.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A9x4.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A9x4.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x4.daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A9x4.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x4.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_VE_Cortex_A9x4.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

FVP_VE_Cortex_A9x4.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A9x4.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A9x4.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A9x4.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A9x4.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A9x4.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A9x4.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A9x4.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x4.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x4.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x4.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A9x4.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A9x4.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A9x4.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A9x4.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A9x4.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A9x4.motherboard.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x4.motherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x4.motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x4.motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x4.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x4.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A9x4.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x4.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x4.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x4.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x4.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A9x4.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x4.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x4.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x4.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x4.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A9x4.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A9x4.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A9x4.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A9x4.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x4.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A9x4.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A9x4.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x4.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x4.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x4.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x4.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_A9x4.motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x4.motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x4.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x4.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x4.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x4.motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_A9x4.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A9x4.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x4.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x4.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x4.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x4.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A9x4.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A9x4.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A9x4.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A9x4.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A9x4.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A9x4.motherboard.virtioBlockDevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A9x4.motherboard.virtioP9Device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A9x4.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A9x4.motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A9x4.motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A9x4.motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A9x4.motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A9x4.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A9x4.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A9x4.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A9x4.periph_clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

15.21 FVP_VE_Cortex-R4

List of instances in FVP_VE_Cortex-R4.

FVP_VE_Cortex-R4 instances

FVP_VE_Cortex_R4

Top level component of the Cortex_R4 Versatile Express inspired model.

Type: [FVP_VE_Cortex_R4](#).

FVP_VE_Cortex_R4.daughterboard

Cortex-R4 DaughterBoard for Versatile Express.

Type: [VEDaughterBoardCortex_R4](#).

FVP_VE_Cortex_R4.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.daughterboard.core

ARM CORTEXR4 CT model.

Type: [ARM_Cortex-R4](#).

FVP_VE_Cortex_R4.daughterboard.core.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_R4.daughterboard.core.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_R4.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R4.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_VE_Cortex_R4.daughterboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_R4.daughterboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_R4.daughterboard.pl111_clcd.pl11x_clcd.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R4.daughterboard.pl111_clcd.pl11x_clcd.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R4.daughterboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R4.daughterboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R4.daughterboard.pl310_l2cc

ARM PrimeCell Level 2 Cache Controller (PL310).

Type: [PL310_L2CC](#).

FVP_VE_Cortex_R4.daughterboard.pl390_gic

Generic Interrupt Controller (PL390).

Type: [PL390_GIC](#).

FVP_VE_Cortex_R4.daughterboard.veinterruptmapper

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_R4.vemotherboard

Model inspired by the ARM Versatile Express Motherboard for R profile.

Type: [VEMotherBoardR](#).

FVP_VE_Cortex_R4.vemotherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_R4.vemotherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R4.vemotherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R4.vemotherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_R4.vemotherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_R4.vemotherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_R4.vemotherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_R4.vemotherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_R4.vemotherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_R4.vemotherboard.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R4.vemotherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R4.vemotherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R4.vemotherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart4

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart4.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart4.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart4.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart4.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R4.vemotherboard.pl011_uart4.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R4.vemotherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_R4.vemotherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R4.vemotherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R4.vemotherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R4.vemotherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R4.vemotherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_R4.vemotherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R4.vemotherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R4.vemotherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R4.vemotherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R4.vemotherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_R4.vemotherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_R4.vemotherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_R4.vemotherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_R4.vemotherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R4.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R4.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R4.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R4.vemotherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_R4.vemotherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_R4.vemotherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R4.vemotherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R4.vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R4.vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R4.vemotherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_R4.vemotherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R4.vemotherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R4.vemotherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R4.vemotherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R4.vemotherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R4.vemotherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_R4.vemotherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_R4.vemotherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R4.vemotherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R4.vemotherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R4.vemotherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R4.vemotherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_R4.vemotherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R4.vemotherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R4.vemotherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R4.vemotherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R4.vemotherboard.terminal_4

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R4.vemotherboard.timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_R4.vemotherboard.timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R4.vemotherboard.timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R4.vemotherboard.timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_R4.vemotherboard.timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R4.vemotherboard.timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R4.vemotherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_R4.vemotherboard.video_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R4.vemotherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_R4.vemotherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_R4.vemotherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R4.vemotherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R4.vemotherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R4.vemotherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R4.vemotherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R4.vemotherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

15.22 FVP_VE_Cortex-R5x1

List of instances in FVP_VE_Cortex-R5x1.

FVP_VE_Cortex-R5x1 instances

FVP_VE_Cortex_R5x1

Top level component of the Cortex_R5x1 Versatile Express inspired model.

Type: FVP_VE_Cortex_R5x1.

FVP_VE_Cortex_R5x1.daughterboard

Cortex-R5x1 DaughterBoard for Versatile Express.

Type: [VEDaughterBoardCortex_R5x1](#).

FVP_VE_Cortex_R5x1.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.daughterboard.core

ARM CORTEXR5 Cluster CT model.

Type: [Cluster_ARM_Cortex-R5](#).

FVP_VE_Cortex_R5x1.daughterboard.core.cpu0

ARM CORTEXR5 CT model.

Type: [ARM_Cortex-R5](#).

FVP_VE_Cortex_R5x1.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R5x1.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_VE_Cortex_R5x1.daughterboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_R5x1.daughterboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_R5x1.daughterboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x1.daughterboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x1.daughterboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x1.daughterboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x1.daughterboard.pl310_l2cc

ARM PrimeCell Level 2 Cache Controller (PL310).

Type: [PL310_L2CC](#).

FVP_VE_Cortex_R5x1.daughterboard.pl390_gic

Generic Interrupt Controller (PL390).

Type: [PL390_GIC](#).

FVP_VE_Cortex_R5x1.daughterboard.veinterruptmapper

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_R5x1.vemotherboard

Model inspired by the ARM Versatile Express Motherboard for R profile.

Type: [VEMotherBoardR](#).

FVP_VE_Cortex_R5x1.vemotherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_R5x1.vemotherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R5x1.vemotherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R5x1.vemotherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_R5x1.vemotherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_R5x1.vemotherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_R5x1.vemotherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_R5x1.vemotherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_R5x1.vemotherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_R5x1.vemotherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x1.vemotherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart4

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart4.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart4.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart4.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart4.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl011_uart4.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x1.vemotherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_R5x1.vemotherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_R5x1.vemotherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x1.vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x1.vemotherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_R5x1.vemotherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x1.vemotherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x1.vemotherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R5x1.vemotherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_R5x1.vemotherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_R5x1.vemotherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x1.vemotherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x1.vemotherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_R5x1.vemotherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R5x1.vemotherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R5x1.vemotherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R5x1.vemotherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R5x1.vemotherboard.terminal_4

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R5x1.vemotherboard.timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_R5x1.vemotherboard.timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R5x1.vemotherboard.timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R5x1.vemotherboard.timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_R5x1.vemotherboard.timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R5x1.vemotherboard.timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R5x1.vemotherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_R5x1.vemotherboard.video_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R5x1.vemotherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_R5x1.vemotherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_R5x1.vemotherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x1.vemotherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x1.vemotherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x1.vemotherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x1.vemotherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

15.23 FVP_VE_Cortex-R5x2

List of instances in FVP_VE_Cortex-R5x2.

FVP_VE_Cortex-R5x2 instances

FVP_VE_Cortex_R5x2

Top level component of the Cortex_R5x2 Versatile Express inspired model.

Type: FVP_VE_Cortex_R5x2.

FVP_VE_Cortex_R5x2.daughterboard

Cortex-R5x2 DaughterBoard for Versatile Express.

Type: VEDaughterBoardCortex_R5x2.

FVP_VE_Cortex_R5x2.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.daughterboard.core

ARM CORTEXR5 Cluster CT model.

Type: Cluster_ARM_Cortex-R5.

FVP_VE_Cortex_R5x2.daughterboard.core.cpu0

ARM CORTEXR5 CT model.

Type: [ARM_Cortex-R5](#).

FVP_VE_Cortex_R5x2.daughterboard.core.cpu1

ARM CORTEXR5 CT model.

Type: [ARM_Cortex-R5](#).

FVP_VE_Cortex_R5x2.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R5x2.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_VE_Cortex_R5x2.daughterboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_R5x2.daughterboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_R5x2.daughterboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x2.daughterboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x2.daughterboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x2.daughterboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x2.daughterboard.pl310_l2cc

ARM PrimeCell Level 2 Cache Controller (PL310).

Type: [PL310_L2CC](#).

FVP_VE_Cortex_R5x2.daughterboard.pl390_gic

Generic Interrupt Controller (PL390).

Type: [PL390_GIC](#).

FVP_VE_Cortex_R5x2.daughterboard.veinterruptmapper

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_R5x2.vemotherboard

Model inspired by the ARM Versatile Express Motherboard for R profile.

Type: [VEMotherBoardR](#).

FVP_VE_Cortex_R5x2.vemotherboard.audioout

SDL based Audio Output for PLO41_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_R5x2.vemotherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R5x2.vemotherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R5x2.vemotherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_R5x2.vemotherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_R5x2.vemotherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_R5x2.vemotherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_R5x2.vemotherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_R5x2.vemotherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_R5x2.vemotherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x2.vemotherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart4

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart4.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart4.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart4.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart4.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl011_uart4.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x2.vemotherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_R5x2.vemotherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_R5x2.vemotherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x2.vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x2.vemotherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_R5x2.vemotherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x2.vemotherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x2.vemotherboard.psrpm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R5x2.vemotherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_R5x2.vemotherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_R5x2.vemotherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x2.vemotherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x2.vemotherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_R5x2.vemotherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R5x2.vemotherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R5x2.vemotherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R5x2.vemotherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R5x2.vemotherboard.terminal_4

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R5x2.vemotherboard.timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_R5x2.vemotherboard.timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R5x2.vemotherboard.timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R5x2.vemotherboard.timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_R5x2.vemotherboard.timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R5x2.vemotherboard.timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R5x2.vemotherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_R5x2.vemotherboard.video_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R5x2.vemotherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_R5x2.vemotherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_R5x2.vemotherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R5x2.vemotherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R5x2.vemotherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R5x2.vemotherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R5x2.vemotherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

15.24 FVP_VE_Cortex-R7x1

List of instances in FVP_VE_Cortex-R7x1.

FVP_VE_Cortex-R7x1 instances

FVP_VE_Cortex_R7x1

Top level component of the Cortex_R7x1 Versatile Express inspired model.

Type: [FVP_VE_Cortex_R7x1](#).

FVP_VE_Cortex_R7x1.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.daughterboard

Cortex_R7x1 DaughterBoard for Versatile Express.

Type: [VEDaughterBoardCortex_R7x1](#).

FVP_VE_Cortex_R7x1.daughterboard.core

ARM CORTEXR7 Cluster CT model.

Type: [Cluster_ARM_Cortex-R7](#).

FVP_VE_Cortex_R7x1.daughterboard.core.cpu0

ARM CORTEXR7 CT model.

Type: [ARM_Cortex-R7](#).

FVP_VE_Cortex_R7x1.daughterboard.core.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_R7x1.daughterboard.core.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_R7x1.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R7x1.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_VE_Cortex_R7x1.daughterboard.periph_clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.daughterboard.pl310_l2cc

ARM PrimeCell Level 2 Cache Controller (PL310).

Type: [PL310_L2CC](#).

FVP_VE_Cortex_R7x1.daughterboard.veinterruptmapper

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_R7x1.vemotherboard

Model inspired by the ARM Versatile Express Motherboard for R profile.

Type: [VEMotherBoardR](#).

FVP_VE_Cortex_R7x1.vemotherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_R7x1.vemotherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R7x1.vemotherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R7x1.vemotherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_R7x1.vemotherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_R7x1.vemotherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_R7x1.vemotherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_R7x1.vemotherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_R7x1.vemotherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_R7x1.vemotherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x1.vemotherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart4

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart4.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart4.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart4.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart4.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl011_uart4.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x1.vemotherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_R7x1.vemotherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_R7x1.vemotherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x1.vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x1.vemotherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_R7x1.vemotherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x1.vemotherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x1.vemotherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R7x1.vemotherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_R7x1.vemotherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_R7x1.vemotherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x1.vemotherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x1.vemotherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_R7x1.vemotherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R7x1.vemotherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R7x1.vemotherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R7x1.vemotherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R7x1.vemotherboard.terminal_4

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R7x1.vemotherboard.timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_R7x1.vemotherboard.timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_R7x1.vemotherboard.timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_R7x1.vemotherboard.timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_R7x1.vemotherboard.timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x1.vemotherboard.timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R7x1.vemotherboard.timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R7x1.vemotherboard.ve_sysregs

Type: VE_SysRegs.

FVP_VE_Cortex_R7x1.vemotherboard.video_ram

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_VE_Cortex_R7x1.vemotherboard.vis

Display window for VE using Visualisation library.

Type: VEVisualisation.

FVP_VE_Cortex_R7x1.vemotherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: VisEventRecorder.

FVP_VE_Cortex_R7x1.vemotherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_VE_Cortex_R7x1.vemotherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: ClockTimerThread.

FVP_VE_Cortex_R7x1.vemotherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: ClockTimerThread64.

FVP_VE_Cortex_R7x1.vemotherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x1.vemotherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x1.vemotherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

15.25 FVP_VE_Cortex-R7x2

List of instances in FVP_VE_Cortex-R7x2.

FVP_VE_Cortex-R7x2 instances

FVP_VE_Cortex_R7x2

Top level component of the Cortex_R7x2 Versatile Express inspired model.

Type: [FVP_VE_Cortex_R7x2](#).

FVP_VE_Cortex_R7x2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.daughterboard

Cortex_R7x2 DaughterBoard for Versatile Express.

Type: [VEDaughterBoardCortex_R7x2](#).

FVP_VE_Cortex_R7x2.daughterboard.core

ARM CORTEXR7 Cluster CT model.

Type: [Cluster_ARM_Cortex-R7](#).

FVP_VE_Cortex_R7x2.daughterboard.core.cpu0

ARM CORTEXR7 CT model.

Type: [ARM_Cortex-R7](#).

FVP_VE_Cortex_R7x2.daughterboard.core.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_R7x2.daughterboard.core.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_R7x2.daughterboard.core.cpu1

ARM CORTEXR7 CT model.

Type: [ARM_Cortex-R7](#).

FVP_VE_Cortex_R7x2.daughterboard.core.cpu1.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_VE_Cortex_R7x2.daughterboard.core.cpu1.l1icache

PV Cache.

Type: [pVCache](#).

FVP_VE_Cortex_R7x2.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R7x2.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_VE_Cortex_R7x2.daughterboard.periph_clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.daughterboard.pl310_l2cc

ARM PrimeCell Level 2 Cache Controller (PL310).

Type: [PL310_L2CC](#).

FVP_VE_Cortex_R7x2.daughterboard.veinterruptmapper

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_R7x2.vemotherboard

Model inspired by the ARM Versatile Express Motherboard for R profile.

Type: [VEMotherBoardR](#).

FVP_VE_Cortex_R7x2.vemotherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_R7x2.vemotherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R7x2.vemotherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R7x2.vemotherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_R7x2.vemotherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_R7x2.vemotherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_R7x2.vemotherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_R7x2.vemotherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_R7x2.vemotherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_R7x2.vemotherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x2.vemotherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart4

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart4.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart4.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart4.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart4.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl011_uart4.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x2.vemotherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_R7x2.vemotherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_R7x2.vemotherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x2.vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x2.vemotherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_R7x2.vemotherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x2.vemotherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x2.vemotherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R7x2.vemotherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_R7x2.vemotherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_R7x2.vemotherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x2.vemotherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x2.vemotherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_R7x2.vemotherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R7x2.vemotherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R7x2.vemotherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R7x2.vemotherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R7x2.vemotherboard.terminal_4

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R7x2.vemotherboard.timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_R7x2.vemotherboard.timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R7x2.vemotherboard.timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R7x2.vemotherboard.timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_R7x2.vemotherboard.timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R7x2.vemotherboard.timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R7x2.vemotherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_R7x2.vemotherboard.video_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R7x2.vemotherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_R7x2.vemotherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_R7x2.vemotherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R7x2.vemotherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R7x2.vemotherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R7x2.vemotherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R7x2.vemotherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

15.26 FVP_VE_Cortex-R8x1

List of instances in FVP_VE_Cortex-R8x1.

FVP_VE_Cortex-R8x1 instances

FVP_VE_Cortex_R8x1

Top level component of the Cortex_R8x1 Versatile Express inspired model.

Type: FVP_VE_Cortex_R8x1.

FVP_VE_Cortex_R8x1.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.daughterboard

Cortex_R8x1 DaughterBoard for Versatile Express.

Type: VEDaughterBoardCortex_R8x1.

FVP_VE_Cortex_R8x1.daughterboard.core

ARM CORTEXR8 Cluster CT model.

Type: Cluster_ARM_Cortex-R8.

FVP_VE_Cortex_R8x1.daughterboard.core.cpu0

ARM CORTEXR8 CT model.

Type: [ARM_Cortex-R8](#).

FVP_VE_Cortex_R8x1.daughterboard.core.cpu0.l1dcache

PV Cache.

Type: PVCache.

FVP_VE_Cortex_R8x1.daughterboard.core.cpu0.l1icache

PV Cache.

Type: PVCache.

FVP_VE_Cortex_R8x1.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R8x1.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_VE_Cortex_R8x1.daughterboard.periph_clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.daughterboard.pl310_l2cc

ARM PrimeCell Level 2 Cache Controller (PL310).

Type: [PL310_L2CC](#).

FVP_VE_Cortex_R8x1.daughterboard.veinterruptmapper

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_R8x1.vemotherboard

Model inspired by the ARM Versatile Express Motherboard for R profile.

Type: [VEMotherBoardR](#).

FVP_VE_Cortex_R8x1.vemotherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_R8x1.vemotherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R8x1.vemotherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R8x1.vemotherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_R8x1.vemotherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_R8x1.vemotherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_R8x1.vemotherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_R8x1.vemotherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_R8x1.vemotherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_R8x1.vemotherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x1.vemotherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart4

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart4.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart4.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart4.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart4.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl011_uart4.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x1.vemotherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_R8x1.vemotherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_R8x1.vemotherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x1.vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x1.vemotherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_R8x1.vemotherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x1.vemotherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x1.vemotherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R8x1.vemotherboard.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_R8x1.vemotherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_R8x1.vemotherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x1.vemotherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x1.vemotherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_R8x1.vemotherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R8x1.vemotherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R8x1.vemotherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R8x1.vemotherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R8x1.vemotherboard.terminal_4

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R8x1.vemotherboard.timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_R8x1.vemotherboard.timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R8x1.vemotherboard.timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R8x1.vemotherboard.timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_R8x1.vemotherboard.timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R8x1.vemotherboard.timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R8x1.vemotherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_R8x1.vemotherboard.video_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R8x1.vemotherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_R8x1.vemotherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_R8x1.vemotherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x1.vemotherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x1.vemotherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x1.vemotherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x1.vemotherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

15.27 FVP_VE_Cortex-R8x2

List of instances in FVP_VE_Cortex-R8x2.

FVP_VE_Cortex-R8x2 instances

FVP_VE_Cortex_R8x2

Top level component of the Cortex_R8x2 Versatile Express inspired model.

Type: `FVP_VE_Cortex_R8x2`.

FVP_VE_Cortex_R8x2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_VE_Cortex_R8x2.daughterboard

Cortex_R8x2 DaughterBoard for Versatile Express.

Type: `VEDaughterBoardCortex_R8x2`.

FVP_VE_Cortex_R8x2.daughterboard.core

ARM CORTEXR8 Cluster CT model.

Type: `Cluster_ARM_Cortex-R8`.

FVP_VE_Cortex_R8x2.daughterboard.core.cpu0

ARM CORTEXR8 CT model.

Type: `ARM_Cortex-R8`.

FVP_VE_Cortex_R8x2.daughterboard.core.cpu0.l1dcache

PV Cache.

Type: `PVCache`.

FVP_VE_Cortex_R8x2.daughterboard.core.cpu0.l1icache

PV Cache.

Type: `PVCache`.

FVP_VE_Cortex_R8x2.daughterboard.core.cpu1

ARM CORTEXR8 CT model.

Type: `ARM_Cortex-R8`.

FVP_VE_Cortex_R8x2.daughterboard.core.cpu1.l1dcache

PV Cache.

Type: `PVCache`.

FVP_VE_Cortex_R8x2.daughterboard.core.cpu1.l1icache

PV Cache.

Type: `PVCache`.

FVP_VE_Cortex_R8x2.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_VE_Cortex_R8x2.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_VE_Cortex_R8x2.daughterboard.periph_clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.daughterboard.pl310_l2cc

ARM PrimeCell Level 2 Cache Controller (PL310).

Type: [PL310_L2CC](#).

FVP_VE_Cortex_R8x2.daughterboard.veinterruptmapper

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_R8x2.vemotherboard

Model inspired by the ARM Versatile Express Motherboard for R profile.

Type: [VEMotherBoardR](#).

FVP_VE_Cortex_R8x2.vemotherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_R8x2.vemotherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R8x2.vemotherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R8x2.vemotherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_R8x2.vemotherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_R8x2.vemotherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_R8x2.vemotherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_R8x2.vemotherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_R8x2.vemotherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_R8x2.vemotherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x2.vemotherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart4

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart4.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart4.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart4.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart4.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl011_uart4.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x2.vemotherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_R8x2.vemotherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_R8x2.vemotherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x2.vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x2.vemotherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_R8x2.vemotherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x2.vemotherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x2.vemotherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R8x2.vemotherboard.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_R8x2.vemotherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_R8x2.vemotherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x2.vemotherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x2.vemotherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_R8x2.vemotherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R8x2.vemotherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R8x2.vemotherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R8x2.vemotherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R8x2.vemotherboard.terminal_4

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R8x2.vemotherboard.timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_R8x2.vemotherboard.timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R8x2.vemotherboard.timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R8x2.vemotherboard.timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_R8x2.vemotherboard.timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R8x2.vemotherboard.timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R8x2.vemotherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_R8x2.vemotherboard.video_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R8x2.vemotherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_R8x2.vemotherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_R8x2.vemotherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x2.vemotherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x2.vemotherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x2.vemotherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x2.vemotherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

15.28 FVP_VE_Cortex-R8x4

List of instances in FVP_VE_Cortex-R8x4.

FVP_VE_Cortex-R8x4 instances

FVP_VE_Cortex_R8x4

Top level component of the Cortex_R8x4 Versatile Express inspired model.

Type: `FVP_VE_Cortex_R8x4`.

FVP_VE_Cortex_R8x4.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_VE_Cortex_R8x4.daughterboard

Cortex_R8x4 DaughterBoard for Versatile Express.

Type: `VEDaughterBoardCortex_R8x4`.

FVP_VE_Cortex_R8x4.daughterboard.core

ARM CORTEXR8 Cluster CT model.

Type: `Cluster_ARM_Cortex-R8`.

FVP_VE_Cortex_R8x4.daughterboard.core.cpu0

ARM CORTEXR8 CT model.

Type: `ARM_Cortex-R8`.

FVP_VE_Cortex_R8x4.daughterboard.core.cpu0.l1dcache

PV Cache.

Type: `PVCache`.

FVP_VE_Cortex_R8x4.daughterboard.core.cpu0.l1icache

PV Cache.

Type: `PVCache`.

FVP_VE_Cortex_R8x4.daughterboard.core.cpu1

ARM CORTEXR8 CT model.

Type: `ARM_Cortex-R8`.

FVP_VE_Cortex_R8x4.daughterboard.core.cpu1.l1dcache

PV Cache.

Type: `PVCache`.

FVP_VE_Cortex_R8x4.daughterboard.core.cpu1.l1icache

PV Cache.

Type: `PVCache`.

FVP_VE_Cortex_R8x4.daughterboard.core.cpu2

ARM CORTEXR8 CT model.

Type: `ARM_Cortex-R8`.

FVP_VE_Cortex_R8x4.daughterboard.core.cpu2.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_R8x4.daughterboard.core.cpu2.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_R8x4.daughterboard.core.cpu3

ARM CORTEXR8 CT model.

Type: [ARM_Cortex-R8](#).

FVP_VE_Cortex_R8x4.daughterboard.core.cpu3.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_R8x4.daughterboard.core.cpu3.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_R8x4.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R8x4.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_VE_Cortex_R8x4.daughterboard.periph_clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.daughterboard.pl310_l2cc

ARM PrimeCell Level 2 Cache Controller (PL310).

Type: [PL310_L2CC](#).

FVP_VE_Cortex_R8x4.daughterboard.veinterruptmapper

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_R8x4.vemotherboard

Model inspired by the ARM Versatile Express Motherboard for R profile.

Type: [VEMotherBoardR](#).

FVP_VE_Cortex_R8x4.vemotherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_R8x4.vemotherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R8x4.vemotherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R8x4.vemotherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_R8x4.vemotherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_R8x4.vemotherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_R8x4.vemotherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_R8x4.vemotherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_R8x4.vemotherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_R8x4.vemotherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x4.vemotherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart4

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart4.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart4.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart4.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart4.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl011_uart4.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x4.vemotherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_R8x4.vemotherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_R8x4.vemotherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x4.vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x4.vemotherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_R8x4.vemotherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x4.vemotherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x4.vemotherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R8x4.vemotherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_R8x4.vemotherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_R8x4.vemotherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x4.vemotherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x4.vemotherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_R8x4.vemotherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R8x4.vemotherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R8x4.vemotherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R8x4.vemotherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R8x4.vemotherboard.terminal_4

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_R8x4.vemotherboard.timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_R8x4.vemotherboard.timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_R8x4.vemotherboard.timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_R8x4.vemotherboard.timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_R8x4.vemotherboard.timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R8x4.vemotherboard.timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_R8x4.vemotherboard.ve_sysregs

Type: VE_SysRegs.

FVP_VE_Cortex_R8x4.vemotherboard.video_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_R8x4.vemotherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_R8x4.vemotherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_R8x4.vemotherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_R8x4.vemotherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_R8x4.vemotherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_R8x4.vemotherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_R8x4.vemotherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

16. MPS2 Platform FVPs

This chapter describes the MPS2 Platform FVPs contained in the FVP Standard Library.

For the MPS2 memory maps, see [MPS2 - memory maps](#) in the *Fast Models Reference Guide*.

16.1 FVP_MPS2_AEMv8M

List of instances in FVP_MPS2_AEMv8M.

About FVP_MPS2_AEMv8M

The MPS2 platform includes many features that enable the creation of complex software. For those new to TrustZone® for Cortex®-M, however, it might be useful to run the model with some of these features disabled. Running the model with the following parameters disables the IDAU and the Security Gates:

```
--parameter idau.NUM IDAU_REGION=0 \
--parameter fvp_mps2.DISABLE_GATING=1
```

FVP_MPS2_AEMv8M instances

FVP_MPS2_AEMv8M

Type: `FVP_MPS2_AEMv8M`.

FVP_MPS2_AEMv8M.clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_AEMv8M.clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_AEMv8M.cpu0

ARM AEMv8M CT model.

Type: `ARM_AEMv8M`.

FVP_MPS2_AEMv8M.cpu1

ARM AEMv8M CT model.

Type: `ARM_AEMv8M`.

FVP_MPS2_AEMv8M.fvp_mps2

MPS2 DUT.

Type: `FVP_MPS2`.

`FVP_MPS2_AEMv8M.fvp_mps2.GPIO0`

ARM PrimeCell General Purpose Input/Output.

Type: `CMSDK_GPIO`.

`FVP_MPS2_AEMv8M.fvp_mps2.GPIO1`

ARM PrimeCell General Purpose Input/Output.

Type: `CMSDK_GPIO`.

`FVP_MPS2_AEMv8M.fvp_mps2.GPIO2`

ARM PrimeCell General Purpose Input/Output.

Type: `CMSDK_GPIO`.

`FVP_MPS2_AEMv8M.fvp_mps2.GPIO3`

ARM PrimeCell General Purpose Input/Output.

Type: `CMSDK_GPIO`.

`FVP_MPS2_AEMv8M.fvp_mps2.GPIO_connection_test`

Type: `GPIO_Connection_Test`.

`FVP_MPS2_AEMv8M.fvp_mps2.GPIO_connection_test.GPIO0_port_trans`

Type: `GPIO_Port_Transfer`.

`FVP_MPS2_AEMv8M.fvp_mps2.GPIO_connection_test.GPIO1_port_test`

Type: `GPIO1_Connection_Test`.

`FVP_MPS2_AEMv8M.fvp_mps2.PSRAM`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`FVP_MPS2_AEMv8M.fvp_mps2.PSRAM_M7`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`FVP_MPS2_AEMv8M.fvp_mps2.UART0`

ARM CMSDK UART Module.

Type: `CMSDK_UART`.

`FVP_MPS2_AEMv8M.fvp_mps2.UART0.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`FVP_MPS2_AEMv8M.fvp_mps2.UART1`

ARM CMSDK UART Module.

Type: `CMSDK_UART`.

`FVP_MPS2_AEMv8M.fvp_mps2.UART1.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_AEMv8M.fvp_mps2.UART2

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_AEMv8M.fvp_mps2.UART2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_AEMv8M.fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: MPS2_VGA.

FVP_MPS2_AEMv8M.fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_AEMv8M.fvp_mps2.ahb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_AEMv8M.fvp_mps2.apb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_AEMv8M.fvp_mps2.apb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_AEMv8M.fvp_mps2.apb_ppc_iotss_expansion2

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_AEMv8M.fvp_mps2.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_AEMv8M.fvp_mps2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_AEMv8M.fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: CMSDK_SysCtrl.

FVP_MPS2_AEMv8M.fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_AEMv8M.fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: OrGate.

FVP_MPS2_AEMv8M.fvp_mps2.cpu_wait_or_gate_1

Or Gate.

Type: OrGate.

FVP_MPS2_AEMv8M.fvp_mps2.dbgen_or_gate

Or Gate.

Type: OrGate.

FVP_MPS2_AEMv8M.fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: PL080_DMACE.

FVP_MPS2_AEMv8M.fvp_mps2.dma0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: ClockTimerThread.

FVP_MPS2_AEMv8M.fvp_mps2.dma0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: ClockTimerThread64.

FVP_MPS2_AEMv8M.fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: SchedulerThread.

FVP_MPS2_AEMv8M.fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: SchedulerThreadEvent.

FVP_MPS2_AEMv8M.fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma1.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma1.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma1.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma1.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma1_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma1_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma2.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_AEMv8M.fvp_mps2.dma3_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_AEMv8M.fvp_mps2.exclusive_monitor_psram

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_AEMv8M.fvp_mps2.exclusive_monitor_psram_iotss

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_AEMv8M.fvp_mps2.exclusive_monitor_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_AEMv8M.fvp_mps2.exclusive_monitor_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_AEMv8M.fvp_mps2.exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_AEMv8M.fvp_mps2.exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_AEMv8M.fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_AEMv8M.fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

FVP_MPS2_AEMv8M.fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_AEMv8M.fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_AEMv8M.fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

FVP_MPS2_AEMv8M.fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

FVP_MPS2_AEMv8M.fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_MPS2_AEMv8M.fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_AEMv8M.fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_AEMv8M.fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_AEMv8M.fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_AEMv8M.fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_AEMv8M.fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_AEMv8M.fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_AEMv8M.fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_AEMv8M.fvp_mps2.mps2_audio

MPS2 Audio.

Type: `MPS2_Audio`.

FVP_MPS2_AEMv8M.fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: `CMSDK_DualTimer`.

FVP_MPS2_AEMv8M.fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_AEMv8M.fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_AEMv8M.fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_AEMv8M.fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_AEMv8M.fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

FVP_MPS2_AEMv8M.fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

FVP_MPS2_AEMv8M.fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: `MPS2_LCD`.

FVP_MPS2_AEMv8M.fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

FVP_MPS2_AEMv8M.fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_MPS2_AEMv8M.fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: `MPS2_SecureCtrl`.

FVP_MPS2_AEMv8M.fvp_mps2.mps2_timer0

ARM Timer Module.

Type: `CMSDK_Timer`.

FVP_MPS2_AEMv8M.fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_AEMv8M.fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_AEMv8M.fvp_mps2.mps2_timer1

ARM Timer Module.

Type: `CMSDK_Timer`.

FVP_MPS2_AEMv8M.fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_AEMv8M.fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_AEMv8M.fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: `MPS2_Visualisation`.

FVP_MPS2_AEMv8M.fvp_mps2.niden_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_AEMv8M.fvp_mps2.nmi_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_AEMv8M.fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: `PL022_SSP_MPS2`.

FVP_MPS2_AEMv8M.fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_AEMv8M.fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_AEMv8M.fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_AEMv8M.fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_AEMv8M.fvp_mps2.signal_router

Signal router.

Type: [SignalRouter](#).

FVP_MPS2_AEMv8M.fvp_mps2.sm91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_MPS2_AEMv8M.fvp_mps2.spiden_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_AEMv8M.fvp_mps2.spniden_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200

SSE-200 subsystem.

Type: [SSE200](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_AEMv8M.fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_AEMv8M.fvp_mps2.sse200.apb_ppc_iotss_subsystem1

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_AEMv8M.fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_AEMv8M.fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_AEMv8M.fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: `CMSDK_DualTimer`.

FVP_MPS2_AEMv8M.fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_AEMv8M.fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_AEMv8M.fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_AEMv8M.fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_AEMv8M.fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.internal_msniiper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIdentity](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.signal_router

Signal router.

Type: [SignalRouter](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_AEMv8M.fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_AEMv8M.fvp_mps2.sse200.timer1

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_AEMv8M.fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_AEMv8M.fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_AEMv8M.fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_AEMv8M.fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_AEMv8M.fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_AEMv8M.fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_AEMv8M.fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_AEMv8M.fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_AEMv8M.fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_AEMv8M.fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer

Type: svos_DualTimer.

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_AEMv8M.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_AEMv8M.fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

FVP_MPS2_AEMv8M.fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

FVP_MPS2_AEMv8M.fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_AEMv8M.fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_AEMv8M.fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_AEMv8M.fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: [MPS2_TouchScreen](#).

FVP_MPS2_AEMv8M.fvp_mps2.uart_overflows_or_gate

Or Gate.

Type: [OrGate](#).

16.2 FVP_MPS2_Cortex-M0

List of instances in FVP_MPS2_Cortex-M0.

FVP_MPS2_Cortex-M0 instances

FVP_MPS2_Cortex_M0

Type: [FVP_MPS2_Cortex_M0](#).

FVP_MPS2_Cortex_M0.armcortexm0ct

ARM CORTEXM0 CT model.

Type: [ARM_Cortex-M0](#).

FVP_MPS2_Cortex_M0.clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.fvp_mps2

MPS2 DUT.

Type: FVP_MPS2.

FVP_MPS2_Cortex_M0.fvp_mps2.GPIO0

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M0.fvp_mps2.GPIO1

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M0.fvp_mps2.GPIO2

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M0.fvp_mps2.GPIO3

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M0.fvp_mps2.GPIO_connection_test

Type: GPIO_Connection_Test.

FVP_MPS2_Cortex_M0.fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: GPIO_Port_Transfer.

FVP_MPS2_Cortex_M0.fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: GPIO1_Connection_Test.

FVP_MPS2_Cortex_M0.fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0.fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0.fvp_mps2.UART0

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M0.fvp_mps2.UART0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.fvp_mps2.UART1

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M0.fvp_mps2.UART1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.fvp_mps2.UART2

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M0.fvp_mps2.UART2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: MPS2_VGA.

FVP_MPS2_Cortex_M0.fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M0.fvp_mps2.ahb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M0.fvp_mps2.apb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M0.fvp_mps2.apb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M0.fvp_mps2.apb_ppc_iotss_expansion2

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M0.fvp_mps2.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.fvp_mps2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: CMSDK_SysCtrl.

FVP_MPS2_Cortex_M0.fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_Cortex_M0.fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M0.fvp_mps2.cpu_wait_or_gate_1

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dbgen_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAL](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma1_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma1_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMACE](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMACE](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M0.fvp_mps2.dma3_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M0.fvp_mps2.exclusive_monitor_psram

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M0.fvp_mps2.exclusive_monitor_psram_iotss

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M0.fvp_mps2.exclusive_monitor_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M0.fvp_mps2.exclusive_monitor_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M0.fvp_mps2.exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M0.fvp_mps2.exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M0.fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_Cortex_M0.fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

FVP_MPS2_Cortex_M0.fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M0.fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M0.fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M0.fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_MPS2_Cortex_M0.fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M0.fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M0.fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M0.fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0.fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M0.fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0.fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

FVP_MPS2_Cortex_M0.fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_MPS2_Cortex_M0.fvp_mps2.mps2_audio

MPS2 Audio.

Type: `MPS2_Audio`.

FVP_MPS2_Cortex_M0.fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: `CMSDK_DualTimer`.

FVP_MPS2_Cortex_M0.fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M0.fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M0.fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_Cortex_M0.fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_Cortex_M0.fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

FVP_MPS2_Cortex_M0.fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

FVP_MPS2_Cortex_M0.fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: `MPS2_LCD`.

FVP_MPS2_Cortex_M0.fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

FVP_MPS2_Cortex_M0.fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_MPS2_Cortex_M0.fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: `MPS2_SecureCtrl`.

FVP_MPS2_Cortex_M0.fvp_mps2.mps2_timer0

ARM Timer Module.

Type: `CMSDK_Timer`.

FVP_MPS2_Cortex_M0.fvp_mps2.mps2_timer0.clk_div

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M0.fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_Cortex_M0.fvp_mps2.mps2_timer1

ARM Timer Module.

Type: `CMSDK_Timer`.

FVP_MPS2_Cortex_M0.fvp_mps2.mps2_timer1.clk_div

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M0.fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_Cortex_M0.fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: `MPS2_Visualisation`.

FVP_MPS2_Cortex_M0.fvp_mps2.niden_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M0.fvp_mps2.nmi_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M0.fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: `PL022_SSP_MPS2`.

FVP_MPS2_Cortex_M0.fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M0.fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M0.fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M0.fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M0.fvp_mps2.signal_router

Signal router.

Type: `SignalRouter`.

FVP_MPS2_Cortex_M0.fvp_mps2.sm91c111

SMSC 91C111 ethernet controller.

Type: `SMSC_91C111`.

FVP_MPS2_Cortex_M0.fvp_mps2.spiden_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M0.fvp_mps2.spniden_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200

SSE-200 subsystem.

Type: `SSE200`.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.apb_ppc_iotss_subsystem1

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.clock32kHz

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.clockdivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: `CMSDK_DualTimer`.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIIdentity](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: MPS2_SecureCtrl.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.signal_router

Signal router.

Type: SignalRouter.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.timer0

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.timer1

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M0.fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0.fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0.fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0.fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0.fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0.fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0.fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0.fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer

Type: [svos_DualTimer](#).

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M0.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M0.fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M0.fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M0.fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M0.fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M0.fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M0.fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: MPS2_TouchScreen.

FVP_MPS2_Cortex_M0.fvp_mps2.uart_overflows_or_gate

Or Gate.

Type: [OrGate](#).

16.3 FVP_MPS2_Cortex-M0plus

List of instances in FVP_MPS2_Cortex-M0plus.

FVP_MPS2_Cortex-M0plus instances

FVP_MPS2_Cortex_M0plus

Type: FVP_MPS2_Cortex_M0plus.

FVP_MPS2_Cortex_M0plus.armcortexm0plusct

ARM CORTEXM0+ CT model.

Type: [ARM_Cortex-M0+](#).

FVP_MPS2_Cortex_M0plus.clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0plus.clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2

MPS2 DUT.

Type: FVP_MPS2.

FVP_MPS2_Cortex_M0plus.fvp_mps2.GPIO0

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M0plus.fvp_mps2.GPIO1

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M0plus.fvp_mps2.GPIO2

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M0plus.fvp_mps2.GPIO3

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M0plus.fvp_mps2.GPIO_connection_test

Type: GPIO_Connection_Test.

FVP_MPS2_Cortex_M0plus.fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: GPIO_Port_Transfer.

FVP_MPS2_Cortex_M0plus.fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: GPIO1_Connection_Test.

FVP_MPS2_Cortex_M0plus.fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.UART0

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M0plus.fvp_mps2.UART0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M0plus.fvp_mps2.UART1

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M0plus.fvp_mps2.UART1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M0plus.fvp_mps2.UART2

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M0plus.fvp_mps2.UART2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M0plus.fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: MPS2_VGA.

FVP_MPS2_Cortex_M0plus.fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M0plus.fvp_mps2.ahb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M0plus.fvp_mps2.apb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M0plus.fvp_mps2.apb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M0plus.fvp_mps2.apb_ppc_iotss_expansion2

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: `CMSDK_SysCtrl`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: `CMSDK_Watchdog`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.cpu_wait_or_gate_1

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.dbgen_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: `PL080_DMAC`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: `ClockTimerThread`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma1_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma1_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.dma3_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.exclusive_monitor_psram

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.exclusive_monitor_psram_iotss

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.exclusive_monitor_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.exclusive_monitor_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBUSExclusiveSquasher](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.mps2_audio

MPS2 Audio.

Type: `MPS2_Audio`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: `CMSDK_DualTimer`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: [MPS2_LCD](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.mps2_timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.mps2_timer1

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: `MPS2_Visualisation`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.niden_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.nmi_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: `PL022_SSP_MPS2`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.pl022_ssp_mps2.prescaler

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.signal_router

Signal router.

Type: `SignalRouter`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: `SM5C_91C111`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.spiden_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.spniden_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200

SSE-200 subsystem.

Type: `SSE200`.

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.**FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.acg_cpu1**

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.**FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.acg_sram0**

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.**FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.acg_sram1**

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.**FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.acg_sram2**

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.**FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.acg_sram3**

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.**FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.apb_ppc_iotss_subsystem0**

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.**FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.apb_ppc_iotss_subsystem1**

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.**FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.clock32kHz**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.clockdivider**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.cmsdk_dualtimer**

ARM Dual-Timer Module.

Type: `CMSDK_DualTimer`.**FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.cmsdk_dualtimer.clk_div0**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBUSExclusiveSquasher](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIdentity](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.signal_router

Signal router.

Type: SignalRouter.

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.timer0

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.timer1

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M0plus.fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M0plus.fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M0plus.fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M0plus.fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M0plus.fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer

Type: [SVOS_DualTimer](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: [MPS2_TouchScreen](#).

FVP_MPS2_Cortex_M0plus.fvp_mps2.uart_overflows_or_gate

Or Gate.

Type: [OrGate](#).

16.4 FVP_MPS2_Cortex-M23

List of instances in FVP_MPS2_Cortex-M23.

About FVP_MPS2_Cortex-M23

The MPS2 platform includes many features that enable the creation of complex software. For those new to TrustZone® for Cortex®-M, however, it might be useful to run the model with some of these features disabled. Running the model with the following parameters disables the IDAU and the Security Gates:

```
--parameter idau.NUM_IDAU_REGION=0 \  
--parameter fvp_mps2.DISABLE_GATING=1
```

FVP_MPS2_Cortex-M23 instances

FVP_MPS2_Cortex_M23

Type: FVP_MPS2_Cortex_M23.

FVP_MPS2_Cortex_M23.clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.cpu0

ARM CORTEXM23 CT model.

Type: [ARM_Cortex-M23](#).

FVP_MPS2_Cortex_M23.cpu1

ARM CORTEXM23 CT model.

Type: [ARM_Cortex-M23](#).

FVP_MPS2_Cortex_M23.fvp_mps2

MPS2 DUT.

Type: FVP_MPS2.

FVP_MPS2_Cortex_M23.fvp_mps2.GPIO0

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M23.fvp_mps2.GPIO1

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M23.fvp_mps2.GPIO2

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M23.fvp_mps2.GPIO3

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M23.fvp_mps2.GPIO_connection_test

Type: GPIO_Connection_Test.

FVP_MPS2_Cortex_M23.fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: GPIO_Port_Transfer.

FVP_MPS2_Cortex_M23.fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: GPIO1_Connection_Test.

FVP_MPS2_Cortex_M23.fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M23.fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M23.fvp_mps2.UART0

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M23.fvp_mps2.UART0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.fvp_mps2.UART1

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M23.fvp_mps2.UART1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.fvp_mps2.UART2

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M23.fvp_mps2.UART2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: MPS2_VGA.

FVP_MPS2_Cortex_M23.fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M23.fvp_mps2.ahb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M23.fvp_mps2.apb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M23.fvp_mps2.apb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M23.fvp_mps2.apb_ppc_iotss_expansion2

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M23.fvp_mps2.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.fvp_mps2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: CMSDK_SysCtrl.

FVP_MPS2_Cortex_M23.fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_Cortex_M23.fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M23.fvp_mps2.cpu_wait_or_gate_1

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dbgen_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMACE](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma1.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma1.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma1.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma1.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma1_idau_labeller

Type: `LabellerIdauSecurity`.

FVP_MPS2_Cortex_M23.fvp_mps2.dma1_securitymodifier

Type: `SecurityModifier`.

FVP_MPS2_Cortex_M23.fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMACE](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma2.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M23.fvp_mps2.dma3_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M23.fvp_mps2.exclusive_monitor_psram

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M23.fvp_mps2.exclusive_monitor_psram_iotss

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M23.fvp_mps2.exclusive_monitor_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M23.fvp_mps2.exclusive_monitor_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M23.fvp_mps2.exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M23.fvp_mps2.exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M23.fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_Cortex_M23.fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

FVP_MPS2_Cortex_M23.fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M23.fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M23.fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M23.fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_MPS2_Cortex_M23.fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M23.fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M23.fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M23.fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M23.fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M23.fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M23.fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M23.fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M23.fvp_mps2.mps2_audio

MPS2 Audio.

Type: [MPS2_Audio](#).

FVP_MPS2_Cortex_M23.fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M23.fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M23.fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M23.fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M23.fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M23.fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: PVBusExclusiveMonitor.

FVP_MPS2_Cortex_M23.fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: PVBusExclusiveMonitor.

FVP_MPS2_Cortex_M23.fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: MPS2_LCD.

FVP_MPS2_Cortex_M23.fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: IoTSS_MemoryProtectionController.

FVP_MPS2_Cortex_M23.fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: SchedulerThreadEvent.

FVP_MPS2_Cortex_M23.fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: MPS2_SecureCtrl.

FVP_MPS2_Cortex_M23.fvp_mps2.mps2_timer0

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M23.fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M23.fvp_mps2.mps2_timer1

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M23.fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M23.fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: MPS2_Visualisation.

FVP_MPS2_Cortex_M23.fvp_mps2.niden_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M23.fvp_mps2.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M23.fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: PL022_SSP_MPS2.

FVP_MPS2_Cortex_M23.fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M23.fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

FVP_MPS2_Cortex_M23.fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

FVP_MPS2_Cortex_M23.fvp_mps2.signal_router

Signal router.

Type: [SignalRouter](#).

FVP_MPS2_Cortex_M23.fvp_mps2.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_MPS2_Cortex_M23.fvp_mps2.spiden_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M23.fvp_mps2.spniden_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200

SSE-200 subsystem.

Type: [SSE200](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.apb_ppc_iotss_subsystem1

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: `CMSDK_DualTimer`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: `PPUv0`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: `IoTSS_CPUIdentity`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: `IoTSS_SystemControl`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: `IoTSS_SystemInfo`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: `IoTSS_MessageHandlingUnit`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: `IoTSS_MessageHandlingUnit`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.signal_router

Signal router.

Type: [SignalRouter](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.timer1

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M23.fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M23.fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M23.fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M23.fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M23.fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M23.fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M23.fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M23.fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M23.fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer

Type: SVOS_DualTimer.

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M23.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M23.fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M23.fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M23.fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M23.fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M23.fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M23.fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: [MPS2_TouchScreen](#).

FVP_MPS2_Cortex_M23.fvp_mps2.uart_overflows_or_gate

Or Gate.

Type: [OrGate](#).

16.5 FVP_MPS2_Cortex-M3

List of instances in FVP_MPS2_Cortex-M3.

FVP_MPS2_Cortex-M3 instances

FVP_MPS2_Cortex_M3

Type: [FVP_MPS2_Cortex_M3](#).

FVP_MPS2_Cortex_M3.armcortexm3ct

ARM CORTEXM3 CT model.

Type: [ARM_Cortex-M3](#).

FVP_MPS2_Cortex_M3.clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2

MPS2 DUT.

Type: FVP_MPS2.

FVP_MPS2_Cortex_M3.fvp_mps2.GPIO0

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M3.fvp_mps2.GPIO1

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M3.fvp_mps2.GPIO2

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M3.fvp_mps2.GPIO3

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M3.fvp_mps2.GPIO_connection_test

Type: GPIO_Connection_Test.

FVP_MPS2_Cortex_M3.fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: GPIO_Port_Transfer.

FVP_MPS2_Cortex_M3.fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: GPIO1_Connection_Test.

FVP_MPS2_Cortex_M3.fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M3.fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M3.fvp_mps2.UART0

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M3.fvp_mps2.UART0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.UART1

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M3.fvp_mps2.UART1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.UART2

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M3.fvp_mps2.UART2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: MPS2_VGA.

FVP_MPS2_Cortex_M3.fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M3.fvp_mps2.ahb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M3.fvp_mps2.apb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M3.fvp_mps2.apb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M3.fvp_mps2.apb_ppc_iotss_expansion2

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M3.fvp_mps2.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: CMSDK_SysCtrl.

FVP_MPS2_Cortex_M3.fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_Cortex_M3.fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M3.fvp_mps2.cpu_wait_or_gate_1

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dbgen_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma1_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma1_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M3.fvp_mps2.dma3_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M3.fvp_mps2.exclusive_monitor_psram

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M3.fvp_mps2.exclusive_monitor_psram_iotss

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M3.fvp_mps2.exclusive_monitor_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M3.fvp_mps2.exclusive_monitor_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M3.fvp_mps2.exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M3.fvp_mps2.exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M3.fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_Cortex_M3.fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

FVP_MPS2_Cortex_M3.fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M3.fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M3.fvp_mps2.gpio_0_or_2

Or Gate.

Type: OrGate.

FVP_MPS2_Cortex_M3.fvp_mps2.gpio_1_or_3

Or Gate.

Type: OrGate.

FVP_MPS2_Cortex_M3.fvp_mps2.hostbridge

Host Socket Interface Component.

Type: HostBridge.

FVP_MPS2_Cortex_M3.fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

FVP_MPS2_Cortex_M3.fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

FVP_MPS2_Cortex_M3.fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: IoTSS_MemoryProtectionController.

FVP_MPS2_Cortex_M3.fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: SchedulerThreadEvent.

FVP_MPS2_Cortex_M3.fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: IoTSS_MemoryProtectionController.

FVP_MPS2_Cortex_M3.fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: SchedulerThreadEvent.

FVP_MPS2_Cortex_M3.fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: IoTSS_MemoryProtectionController.

FVP_MPS2_Cortex_M3.fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M3.fvp_mps2.mps2_audio

MPS2 Audio.

Type: [MPS2_Audio](#).

FVP_MPS2_Cortex_M3.fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M3.fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M3.fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M3.fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M3.fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M3.fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: [MPS2_LCD](#).

FVP_MPS2_Cortex_M3.fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M3.fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M3.fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

FVP_MPS2_Cortex_M3.fvp_mps2.mps2_timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M3.fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M3.fvp_mps2.mps2_timer1

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M3.fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M3.fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: [MPS2_Visualisation](#).

FVP_MPS2_Cortex_M3.fvp_mps2.niden_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M3.fvp_mps2.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M3.fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: `PL022_SSP_MPS2`.

FVP_MPS2_Cortex_M3.fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M3.fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M3.fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M3.fvp_mps2.platform_switch_dmal

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M3.fvp_mps2.signal_router

Signal router.

Type: `SignalRouter`.

FVP_MPS2_Cortex_M3.fvp_mps2.smc_91c111

SMSC 91C111 ethernet controller.

Type: `SMSC_91C111`.

FVP_MPS2_Cortex_M3.fvp_mps2.spiden_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M3.fvp_mps2.spniden_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200

SSE-200 subsystem.

Type: `sse200`.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.apb_ppc_iotss_subsystem1

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: `CMSDK_DualTimer`.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.cpulcore_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.cpuldbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: PVBusExclusiveMonitor.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: PVBusExclusiveMonitor.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: PVBusExclusiveMonitor.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: PVBusExclusiveMonitor.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIentity](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: MPS2_SecureCtrl.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.signal_router

Signal router.

Type: SignalRouter.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.timer0

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.timer1

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M3.fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M3.fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M3.fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M3.fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M3.fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M3.fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M3.fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M3.fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer

Type: [svos_DualTimer](#).

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M3.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M3.fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M3.fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M3.fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M3.fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M3.fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M3.fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: MPS2_TouchScreen.

FVP_MPS2_Cortex_M3.fvp_mps2.uart_overflows_or_gate

Or Gate.

Type: [OrGate](#).

16.6 FVP_MPS2_Cortex-M33

List of instances in FVP_MPS2_Cortex-M33.

About FVP_MPS2_Cortex-M33

The MPS2 platform includes many features that enable the creation of complex software. For those new to TrustZone® for Cortex®-M, however, it might be useful to run the model with some of

these features disabled. Running the model with the following parameters disables the IDAU and the Security Gates:

```
--parameter idau.NUM IDAU_REGION=0 \  
--parameter fvp_mps2.DISABLE_GATING=1
```

FVP_MPS2_Cortex-M33 instances

FVP_MPS2_Cortex_M33

Type: `FVP_MPS2_Cortex_M33`.

FVP_MPS2_Cortex_M33.clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M33.clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M33.cpu0

ARM CORTEXM33 CT model.

Type: `ARM_Cortex-M33`.

FVP_MPS2_Cortex_M33.cpu1

ARM CORTEXM33 CT model.

Type: `ARM_Cortex-M33`.

FVP_MPS2_Cortex_M33.fvp_mps2

MPS2 DUT.

Type: `FVP_MPS2`.

FVP_MPS2_Cortex_M33.fvp_mps2.GPIO0

ARM PrimeCell General Purpose Input/Output.

Type: `CMSDK_GPIO`.

FVP_MPS2_Cortex_M33.fvp_mps2.GPIO1

ARM PrimeCell General Purpose Input/Output.

Type: `CMSDK_GPIO`.

FVP_MPS2_Cortex_M33.fvp_mps2.GPIO2

ARM PrimeCell General Purpose Input/Output.

Type: `CMSDK_GPIO`.

FVP_MPS2_Cortex_M33.fvp_mps2.GPIO3

ARM PrimeCell General Purpose Input/Output.

Type: `CMSDK_GPIO`.

FVP_MPS2_Cortex_M33.fvp_mps2.GPIO_connection_test

Type: [GPIO_Connection_Test](#).

FVP_MPS2_Cortex_M33.fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: [GPIO_Port_Transfer](#).

FVP_MPS2_Cortex_M33.fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: [GPIO1_Connection_Test](#).

FVP_MPS2_Cortex_M33.fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M33.fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M33.fvp_mps2.UART0

ARM CMSDK UART Module.

Type: [CMSDK_UART](#).

FVP_MPS2_Cortex_M33.fvp_mps2.UART0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M33.fvp_mps2.UART1

ARM CMSDK UART Module.

Type: [CMSDK_UART](#).

FVP_MPS2_Cortex_M33.fvp_mps2.UART1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M33.fvp_mps2.UART2

ARM CMSDK UART Module.

Type: [CMSDK_UART](#).

FVP_MPS2_Cortex_M33.fvp_mps2.UART2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M33.fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: [MPS2_VGA](#).

FVP_MPS2_Cortex_M33.fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M33.fvp_mps2.ahb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M33.fvp_mps2.apb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M33.fvp_mps2.apb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M33.fvp_mps2.apb_ppc_iotss_expansion2

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M33.fvp_mps2.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M33.fvp_mps2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M33.fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: [CMSDK_SysCtrl](#).

FVP_MPS2_Cortex_M33.fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M33.fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M33.fvp_mps2.cpu_wait_or_gate_1

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dbgen_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma1_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma1_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M33.fvp_mps2.dma3_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M33.fvp_mps2.exclusive_monitor_psram

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M33.fvp_mps2.exclusive_monitor_psram_iotss

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M33.fvp_mps2.exclusive_monitor_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M33.fvp_mps2.exclusive_monitor_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M33.fvp_mps2.exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M33.fvp_mps2.exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M33.fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_Cortex_M33.fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

FVP_MPS2_Cortex_M33.fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M33.fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M33.fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M33.fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M33.fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_MPS2_Cortex_M33.fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M33.fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M33.fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M33.fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M33.fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M33.fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M33.fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M33.fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M33.fvp_mps2.mps2_audio

MPS2 Audio.

Type: [MPS2_Audio](#).

FVP_MPS2_Cortex_M33.fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M33.fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M33.fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M33.fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M33.fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M33.fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M33.fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M33.fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: MPS2_LCD.

FVP_MPS2_Cortex_M33.fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: IoTSS_MemoryProtectionController.

FVP_MPS2_Cortex_M33.fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M33.fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: MPS2_SecureCtrl.

FVP_MPS2_Cortex_M33.fvp_mps2.mps2_timer0

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M33.fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M33.fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M33.fvp_mps2.mps2_timer1

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M33.fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M33.fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M33.fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: MPS2_Visualisation.

FVP_MPS2_Cortex_M33.fvp_mps2.niden_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M33.fvp_mps2.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M33.fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: PL022_SSP_MPS2.

FVP_MPS2_Cortex_M33.fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M33.fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

FVP_MPS2_Cortex_M33.fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

FVP_MPS2_Cortex_M33.fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

FVP_MPS2_Cortex_M33.fvp_mps2.signal_router

Signal router.

Type: SignalRouter.

FVP_MPS2_Cortex_M33.fvp_mps2.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_MPS2_Cortex_M33.fvp_mps2.spiden_or_gate

Or Gate.

Type: [OrGate](#).**FVP_MPS2_Cortex_M33.fvp_mps2.spniden_or_gate**

Or Gate.

Type: [OrGate](#).**FVP_MPS2_Cortex_M33.fvp_mps2.sse200**

SSE-200 subsystem.

Type: [sse200](#).**FVP_MPS2_Cortex_M33.fvp_mps2.sse200.acg_cpu0**

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).**FVP_MPS2_Cortex_M33.fvp_mps2.sse200.acg_cpu1**

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).**FVP_MPS2_Cortex_M33.fvp_mps2.sse200.acg_sram0**

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).**FVP_MPS2_Cortex_M33.fvp_mps2.sse200.acg_sram1**

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).**FVP_MPS2_Cortex_M33.fvp_mps2.sse200.acg_sram2**

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).**FVP_MPS2_Cortex_M33.fvp_mps2.sse200.acg_sram3**

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).**FVP_MPS2_Cortex_M33.fvp_mps2.sse200.apb_ppc_iotss_subsystem0**

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).**FVP_MPS2_Cortex_M33.fvp_mps2.sse200.apb_ppc_iotss_subsystem1**

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).**FVP_MPS2_Cortex_M33.fvp_mps2.sse200.clock32kHz**

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIIdentity](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: `CMSDK_Watchdog`.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: `PPUv0`.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: `PPUv0`.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: `PPUv0`.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: `PPUv0`.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: `CMSDK_Timer`.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: MPS2_SecureCtrl.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.signal_router

Signal router.

Type: SignalRouter.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.timer0

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.timer1

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M33.fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M33.fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M33.fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M33.fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M33.fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M33.fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M33.fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M33.fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M33.fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer

Type: [SVOS_DualTimer](#).

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M33.fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: PVBUSRouter.

FVP_MPS2_Cortex_M33.fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: PVBUSRouter.

FVP_MPS2_Cortex_M33.fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: TelnetTerminal.

FVP_MPS2_Cortex_M33.fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: TelnetTerminal.

FVP_MPS2_Cortex_M33.fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: TelnetTerminal.

FVP_MPS2_Cortex_M33.fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: `MPS2_TouchScreen`.**FVP_MPS2_Cortex_M33.fvp_mps2.uart_overflows_or_gate**

Or Gate.

Type: `OrGate`.

16.7 FVP_MPS2_Cortex-M35P

List of instances in FVP_MPS2_Cortex-M35P.

About FVP_MPS2_Cortex-M35P

The MPS2 platform includes many features that enable the creation of complex software. For those new to TrustZone® for Cortex®-M, however, it might be useful to run the model with some of these features disabled. Running the model with the following parameters disables the IDAU and the Security Gates:

```
--parameter idau.NUM_IDAU_REGION=0 \
--parameter fvp_mps2.DISABLE_GATING=1
```

FVP_MPS2_Cortex-M35P instances

FVP_MPS2_Cortex_M35PType: `FVP_MPS2_Cortex_M35P`.**FVP_MPS2_Cortex_M35P.clk25Mhz**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.**FVP_MPS2_Cortex_M35P.clk25khz**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.**FVP_MPS2_Cortex_M35P.cpu0**

ARM CORTEXM35P CT model.

Type: `ARM_Cortex-M35P`.**FVP_MPS2_Cortex_M35P.cpu1**

ARM CORTEXM35P CT model.

Type: `ARM_Cortex-M35P`.

FVP_MPS2_Cortex_M35P.fvp_mps2

MPS2 DUT.

Type: FVP_MPS2.

FVP_MPS2_Cortex_M35P.fvp_mps2.GPIO0

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M35P.fvp_mps2.GPIO1

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M35P.fvp_mps2.GPIO2

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M35P.fvp_mps2.GPIO3

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M35P.fvp_mps2.GPIO_connection_test

Type: GPIO_Connection_Test.

FVP_MPS2_Cortex_M35P.fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: GPIO_Port_Transfer.

FVP_MPS2_Cortex_M35P.fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: GPIO1_Connection_Test.

FVP_MPS2_Cortex_M35P.fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.UART0

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M35P.fvp_mps2.UART0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.UART1

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M35P.fvp_mps2.UART1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.UART2

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M35P.fvp_mps2.UART2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: MPS2_VGA.

FVP_MPS2_Cortex_M35P.fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M35P.fvp_mps2.ahb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M35P.fvp_mps2.apb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M35P.fvp_mps2.apb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M35P.fvp_mps2.apb_ppc_iotss_expansion2

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M35P.fvp_mps2.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: CMSDK_SysCtrl.

FVP_MPS2_Cortex_M35P.fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_Cortex_M35P.fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.cpu_wait_or_gate_1

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dbgen_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma1_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma1_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma3.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma3.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.dma3_idau_labeller

Type: `LabellerIdauSecurity`.

FVP_MPS2_Cortex_M35P.fvp_mps2.dma3_securitymodifier

Type: `SecurityModifier`.

FVP_MPS2_Cortex_M35P.fvp_mps2.exclusive_monitor_psram

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.exclusive_monitor_psram_iotss

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.exclusive_monitor_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.exclusive_monitor_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.fpga_sysctrl

FPGA `SysCtrl` timers LEDs and switches.

Type: `FPGA_SysCtrl`.

FVP_MPS2_Cortex_M35P.fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mps2_audio

MPS2 Audio.

Type: [MPS2_Audio](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: [MPS2_LCD](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mps2_timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mps2_timer1

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: [MPS2_Visualisation](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.niden_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: `PL022_SSP_MPS2`.

FVP_MPS2_Cortex_M35P.fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M35P.fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M35P.fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M35P.fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M35P.fvp_mps2.signal_router

Signal router.

Type: `SignalRouter`.

FVP_MPS2_Cortex_M35P.fvp_mps2.smc_91c111

SMSC 91C111 ethernet controller.

Type: `SMSC_91C111`.

FVP_MPS2_Cortex_M35P.fvp_mps2.spiden_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M35P.fvp_mps2.spniden_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200

SSE-200 subsystem.

Type: `SSE200`.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.apb_ppc_iotss_subsystem1

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: `CMSDK_DualTimer`.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: PVBusExclusiveMonitor.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: PVBusExclusiveMonitor.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: PVBusExclusiveMonitor.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: PVBusExclusiveMonitor.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIIdentity](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: MPS2_SecureCtrl.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.signal_router

Signal router.

Type: SignalRouter.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.timer0

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.timer1

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M35P.fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer

Type: [svos_DualTimer](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M35P.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M35P.fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M35P.fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: MPS2_TouchScreen.

FVP_MPS2_Cortex_M35P.fvp_mps2.uart_overflows_or_gate

Or Gate.

Type: [OrGate](#).

16.8 FVP_MPS2_Cortex-M4

List of instances in FVP_MPS2_Cortex-M4.

FVP_MPS2_Cortex-M4 instances

FVP_MPS2_Cortex_M4

Type: FVP_MPS2_Cortex_M4.

FVP_MPS2_Cortex_M4.armcortexm4ct

ARM CORTEXM4 CT model.

Type: [ARM_Cortex-M4](#).

FVP_MPS2_Cortex_M4.clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M4.clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M4.fvp_mps2

MPS2 DUT.

Type: FVP_MPS2.

FVP_MPS2_Cortex_M4.fvp_mps2.GPIO0

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M4.fvp_mps2.GPIO1

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M4.fvp_mps2.GPIO2

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M4.fvp_mps2.GPIO3

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M4.fvp_mps2.GPIO_connection_test

Type: GPIO_Connection_Test.

FVP_MPS2_Cortex_M4.fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: GPIO_Port_Transfer.

FVP_MPS2_Cortex_M4.fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: GPIO1_Connection_Test.

FVP_MPS2_Cortex_M4.fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M4.fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M4.fvp_mps2.UART0

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M4.fvp_mps2.UART0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M4.fvp_mps2.UART1

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M4.fvp_mps2.UART1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M4.fvp_mps2.UART2

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M4.fvp_mps2.UART2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M4.fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: MPS2_VGA.

FVP_MPS2_Cortex_M4.fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M4.fvp_mps2.ahb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M4.fvp_mps2.apb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M4.fvp_mps2.apb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M4.fvp_mps2.apb_ppc_iotss_expansion2

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_Cortex_M4.fvp_mps2.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M4.fvp_mps2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M4.fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: `CMSDK_SysCtrl`.

FVP_MPS2_Cortex_M4.fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: `CMSDK_Watchdog`.

FVP_MPS2_Cortex_M4.fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M4.fvp_mps2.cpu_wait_or_gate_1

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M4.fvp_mps2.dbgen_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M4.fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: `PL080_DMAC`.

FVP_MPS2_Cortex_M4.fvp_mps2.dma0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: `ClockTimerThread`.

FVP_MPS2_Cortex_M4.fvp_mps2.dma0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma1_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma1_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M4.fvp_mps2.dma3_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M4.fvp_mps2.exclusive_monitor_psram

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M4.fvp_mps2.exclusive_monitor_psram_iotss

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M4.fvp_mps2.exclusive_monitor_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M4.fvp_mps2.exclusive_monitor_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M4.fvp_mps2.exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M4.fvp_mps2.exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M4.fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBUSExclusiveSquasher](#).

FVP_MPS2_Cortex_M4.fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

FVP_MPS2_Cortex_M4.fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M4.fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M4.fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M4.fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M4.fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_MPS2_Cortex_M4.fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

FVP_MPS2_Cortex_M4.fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

FVP_MPS2_Cortex_M4.fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M4.fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M4.fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

FVP_MPS2_Cortex_M4.fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_MPS2_Cortex_M4.fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

FVP_MPS2_Cortex_M4.fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_MPS2_Cortex_M4.fvp_mps2.mps2_audio

MPS2 Audio.

Type: `MPS2_Audio`.

FVP_MPS2_Cortex_M4.fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: `CMSDK_DualTimer`.

FVP_MPS2_Cortex_M4.fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M4.fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M4.fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_Cortex_M4.fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_Cortex_M4.fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

FVP_MPS2_Cortex_M4.fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M4.fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: [MPS2_LCD](#).

FVP_MPS2_Cortex_M4.fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M4.fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M4.fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

FVP_MPS2_Cortex_M4.fvp_mps2.mps2_timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M4.fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M4.fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M4.fvp_mps2.mps2_timer1

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M4.fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M4.fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M4.fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: `MPS2_Visualisation`.

FVP_MPS2_Cortex_M4.fvp_mps2.niden_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M4.fvp_mps2.nmi_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M4.fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: `PL022_SSP_MPS2`.

FVP_MPS2_Cortex_M4.fvp_mps2.pl022_ssp_mps2.prescaler

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M4.fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M4.fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M4.fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M4.fvp_mps2.signal_router

Signal router.

Type: `SignalRouter`.

FVP_MPS2_Cortex_M4.fvp_mps2.smc_91c111

SMSC 91C111 ethernet controller.

Type: `SMSC_91C111`.

FVP_MPS2_Cortex_M4.fvp_mps2.spiden_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M4.fvp_mps2.spniden_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M4.fvp_mps2.sse200

SSE-200 subsystem.

Type: `SSE200`.

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.**FVP_MPS2_Cortex_M4.fvp_mps2.sse200.acg_cpu1**

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.**FVP_MPS2_Cortex_M4.fvp_mps2.sse200.acg_sram0**

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.**FVP_MPS2_Cortex_M4.fvp_mps2.sse200.acg_sram1**

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.**FVP_MPS2_Cortex_M4.fvp_mps2.sse200.acg_sram2**

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.**FVP_MPS2_Cortex_M4.fvp_mps2.sse200.acg_sram3**

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.**FVP_MPS2_Cortex_M4.fvp_mps2.sse200.apb_ppc_iotss_subsystem0**

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.**FVP_MPS2_Cortex_M4.fvp_mps2.sse200.apb_ppc_iotss_subsystem1**

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.**FVP_MPS2_Cortex_M4.fvp_mps2.sse200.clock32kHz**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**FVP_MPS2_Cortex_M4.fvp_mps2.sse200.clockdivider**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**FVP_MPS2_Cortex_M4.fvp_mps2.sse200.cmsdk_dualtimer**

ARM Dual-Timer Module.

Type: `CMSDK_DualTimer`.**FVP_MPS2_Cortex_M4.fvp_mps2.sse200.cmsdk_dualtimer.clk_div0**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBUSExclusiveSquasher](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIdentity](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.signal_router

Signal router.

Type: SignalRouter.

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.timer0

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.timer1

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M4.fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M4.fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M4.fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M4.fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M4.fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M4.fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M4.fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M4.fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M4.fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer

Type: [SVOS_DualTimer](#).

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M4.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M4.fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M4.fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M4.fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M4.fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M4.fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M4.fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: [MPS2_TouchScreen](#).

FVP_MPS2_Cortex_M4.fvp_mps2.uart_overflows_or_gate

Or Gate.

Type: [OrGate](#).

16.9 FVP_MPS2_Cortex-M52

List of instances in FVP_MPS2_Cortex-M52.

About FVP_MPS2_Cortex-M52

The MPS2 platform includes many features that enable the creation of complex software. For those new to TrustZone® for Cortex®-M, however, it might be useful to run the model with some of these features disabled. Running the model with the following parameters disables the IDAU and the Security Gates:

```
--parameter idau.NUM_IDAU_REGION=0 \  
--parameter fvp_mps2.DISABLE_GATING=1
```

FVP_MPS2_Cortex-M52 has the following limitations:

- It does not have the Random number generator or Unique ID/secure storage mentioned in the MPS2 specification.
- The Ethernet controller in the model is a LAN91C111. The MPS2 documents, including those for pre-v8-M cores, specify a LAN9220.
- MTB, ETM, and TPIU are not supported. MTB RAM is absent.
- In the Memory Gating Unit, the model provides a configurable block size. For performance reasons, the minimum block size in the model is 4096 bytes. Hardware and later models may allow smaller block sizes. Software should always use the `BLK_CFG` register to determine block size.
- As in other MPS2 Fast Models, some of the peripherals have minimal implementations:
 - The Audio controller is RAZ/WI.
 - Only the touchscreen functionality of the STMPE811 touchscreen controller is implemented.
 - A subset of the Ampire LCD module's graphics modes are supported.
- See the full set of model parameters and their descriptions by running the model with the `--list-params` argument. Most parameters share their names with a corresponding RTL configuration parameter.

FVP_MPS2_Cortex-M52 instances

FVP_MPS2_Cortex_M52

Type: `FVP_MPS2_Cortex_M52`.

FVP_MPS2_Cortex_M52.clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M52.clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.core0_bus_gasket

writes are ignored, non-word reads abort, and word reads take values from that fifo.

Type: [STLBusGasket](#).

FVP_MPS2_Cortex_M52.cpu0

ARM Cortex-M52 CT model.

Type: [ARM_Cortex-M52](#).

FVP_MPS2_Cortex_M52.cpu1

ARM Cortex-M52 CT model.

Type: [ARM_Cortex-M52](#).

FVP_MPS2_Cortex_M52.fvp_mps2

MPS2 DUT.

Type: [FVP_MPS2](#).

FVP_MPS2_Cortex_M52.fvp_mps2.GPIO0

ARM PrimeCell General Purpose Input/Output.

Type: [CMSDK_GPIO](#).

FVP_MPS2_Cortex_M52.fvp_mps2.GPIO1

ARM PrimeCell General Purpose Input/Output.

Type: [CMSDK_GPIO](#).

FVP_MPS2_Cortex_M52.fvp_mps2.GPIO2

ARM PrimeCell General Purpose Input/Output.

Type: [CMSDK_GPIO](#).

FVP_MPS2_Cortex_M52.fvp_mps2.GPIO3

ARM PrimeCell General Purpose Input/Output.

Type: [CMSDK_GPIO](#).

FVP_MPS2_Cortex_M52.fvp_mps2.GPIO_connection_test

Type: [GPIO_Connection_Test](#).

FVP_MPS2_Cortex_M52.fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: [GPIO_Port_Transfer](#).

FVP_MPS2_Cortex_M52.fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: [GPIO1_Connection_Test](#).

FVP_MPS2_Cortex_M52.fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M52.fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M52.fvp_mps2.UART0

ARM CMSDK UART Module.

Type: [CMSDK_UART](#).

FVP_MPS2_Cortex_M52.fvp_mps2.UART0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.UART1

ARM CMSDK UART Module.

Type: [CMSDK_UART](#).

FVP_MPS2_Cortex_M52.fvp_mps2.UART1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.UART2

ARM CMSDK UART Module.

Type: [CMSDK_UART](#).

FVP_MPS2_Cortex_M52.fvp_mps2.UART2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: [MPS2_VGA](#).

FVP_MPS2_Cortex_M52.fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M52.fvp_mps2.ahb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M52.fvp_mps2.apb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M52.fvp_mps2.apb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_Cortex_M52.fvp_mps2.apb_ppc_iotss_expansion2

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_Cortex_M52.fvp_mps2.clock50Hz

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M52.fvp_mps2.clockdivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M52.fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: `CMSDK_SysCtrl`.

FVP_MPS2_Cortex_M52.fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: `CMSDK_Watchdog`.

FVP_MPS2_Cortex_M52.fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M52.fvp_mps2.cpu_wait_or_gate_1

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M52.fvp_mps2.dbgen_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M52.fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: `PL080_DMAC`.

FVP_MPS2_Cortex_M52.fvp_mps2.dma0.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMACE](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma1_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma1_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M52.fvp_mps2.dma3_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M52.fvp_mps2.exclusive_monitor_psram

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M52.fvp_mps2.exclusive_monitor_psram_iotss

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M52.fvp_mps2.exclusive_monitor_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M52.fvp_mps2.exclusive_monitor_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M52.fvp_mps2.exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M52.fvp_mps2.exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M52.fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_Cortex_M52.fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

FVP_MPS2_Cortex_M52.fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M52.fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M52.fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M52.fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mps2_audio

MPS2 Audio.

Type: [MPS2_Audio](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: [MPS2_LCD](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mps2_timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mps2_timer1

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M52.fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: MPS2_Visualisation.

FVP_MPS2_Cortex_M52.fvp_mps2.niden_or_gate

Or Gate.

Type: OrGate.

FVP_MPS2_Cortex_M52.fvp_mps2.nmi_or_gate

Or Gate.

Type: OrGate.

FVP_MPS2_Cortex_M52.fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: PL022_SSP_MPS2.

FVP_MPS2_Cortex_M52.fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M52.fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

FVP_MPS2_Cortex_M52.fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

FVP_MPS2_Cortex_M52.fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

FVP_MPS2_Cortex_M52.fvp_mps2.signal_router

Signal router.

Type: SignalRouter.

FVP_MPS2_Cortex_M52.fvp_mps2.smc_91c111

SMSC 91C111 ethernet controller.

Type: SMC_91C111.

FVP_MPS2_Cortex_M52.fvp_mps2.spiden_or_gate

Or Gate.

Type: OrGate.

FVP_MPS2_Cortex_M52.fvp_mps2.spniden_or_gate

Or Gate.

Type: OrGate.

FVP_MPS2_Cortex_M52.fvp_mps2.sse200

SSE-200 subsystem.

Type: SSE200.

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.apb_ppc_iotss_subsystem1

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIdentity](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.signal_router

Signal router.

Type: SignalRouter.

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.timer0

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.timer1

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M52.fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M52.fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M52.fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M52.fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M52.fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M52.fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M52.fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M52.fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M52.fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer

Type: [svos_DualTimer](#).

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M52.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M52.fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M52.fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M52.fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M52.fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M52.fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M52.fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: [MPS2_TouchScreen](#).

FVP_MPS2_Cortex_M52.fvp_mps2.uart_overflows_or_gate

Or Gate.

Type: [OrGate](#).

16.10 FVP_MPS2_Cortex-M55

List of instances in FVP_MPS2_Cortex-M55.

About FVP_MPS2_Cortex-M55

The MPS2 platform includes many features that enable the creation of complex software. For those new to TrustZone® for Cortex®-M, however, it might be useful to run the model with some of these features disabled. Running the model with the following parameters disables the IDAU and the Security Gates:

```
--parameter idau.NUM_IDAU_REGION=0 \  
--parameter fvp_mps2.DISABLE_GATING=1
```

FVP_MPS2_Cortex-M55 has the following differences from the MPS2 specification:

- The model does not have the random number generator or unique ID/secure storage mentioned in the MPS2 specification because the programmer's view of these devices is yet to be defined.
- The Ethernet controller in the model is a LAN91C111. The MPS2 documents, including those for pre-v8-M cores, specify a LAN9220.
- MTB, ETM, and TPIU are not supported. MTB RAM is absent.
- In the Memory Gating Unit, the model provides a configurable block size. For performance reasons, the minimum block size in the model is 4096 bytes. Hardware and later models might allow smaller block sizes. Software should always use the `BLK_CFG` register to determine block size.
- As in other MPS2 Fast Models, some of the peripherals have minimal implementations:
 - The Audio controller is RAZ/WI.
 - Only the touchscreen functionality of the STMPE811 touchscreen controller is implemented.
 - A subset of the Ampire LCD module's graphics modes are supported.

FVP_MPS2_Cortex-M55 instances

FVP_MPS2_Cortex_M55

Type: `FVP_MPS2_Cortex_M55`.

FVP_MPS2_Cortex_M55.clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.core0_bus_gasket

writes are ignored, non-word reads abort, and word reads take values from that fifo.

Type: [STLBusGasket](#).

FVP_MPS2_Cortex_M55.cpu0

ARM Cortex-M55 CT model.

Type: [ARM_Cortex-M55](#).

FVP_MPS2_Cortex_M55.cpu1

ARM Cortex-M55 CT model.

Type: [ARM_Cortex-M55](#).

FVP_MPS2_Cortex_M55.fvp_mps2

MPS2 DUT.

Type: FVP_MPS2.

FVP_MPS2_Cortex_M55.fvp_mps2.GPIO0

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M55.fvp_mps2.GPIO1

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M55.fvp_mps2.GPIO2

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M55.fvp_mps2.GPIO3

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M55.fvp_mps2.GPIO_connection_test

Type: GPIO_Connection_Test.

FVP_MPS2_Cortex_M55.fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: GPIO_Port_Transfer.

FVP_MPS2_Cortex_M55.fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: GPIO1_Connection_Test.

FVP_MPS2_Cortex_M55.fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M55.fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M55.fvp_mps2.UART0

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M55.fvp_mps2.UART0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.UART1

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M55.fvp_mps2.UART1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.UART2

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_Cortex_M55.fvp_mps2.UART2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: MPS2_VGA.

FVP_MPS2_Cortex_M55.fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M55.fvp_mps2.ahb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M55.fvp_mps2.apb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M55.fvp_mps2.apb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M55.fvp_mps2.apb_ppc_iotss_expansion2

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M55.fvp_mps2.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: [CMSDK_SysCtrl](#).

FVP_MPS2_Cortex_M55.fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M55.fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M55.fvp_mps2.cpu_wait_or_gate_1

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dbgen_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke

wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma1_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma1_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma2.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma2.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma2.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma2.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma3.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M55.fvp_mps2.dma3_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M55.fvp_mps2.exclusive_monitor_psram

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M55.fvp_mps2.exclusive_monitor_psram_iotss

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M55.fvp_mps2.exclusive_monitor_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

FVP_MPS2_Cortex_M55.fvp_mps2.exclusive_monitor_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

FVP_MPS2_Cortex_M55.fvp_mps2.exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M55.fvp_mps2.exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M55.fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_Cortex_M55.fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

FVP_MPS2_Cortex_M55.fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M55.fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M55.fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M55.fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mps2_audio

MPS2 Audio.

Type: [MPS2_Audio](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: MPS2_LCD.

FVP_MPS2_Cortex_M55.fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: IoTSS_MemoryProtectionController.

FVP_MPS2_Cortex_M55.fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: MPS2_SecureCtrl.

FVP_MPS2_Cortex_M55.fvp_mps2.mps2_timer0

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M55.fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M55.fvp_mps2.mps2_timer1

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M55.fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M55.fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: MPS2_Visualisation.

FVP_MPS2_Cortex_M55.fvp_mps2.niden_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M55.fvp_mps2.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M55.fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: [PL022_SSP_MPS2](#).

FVP_MPS2_Cortex_M55.fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M55.fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M55.fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M55.fvp_mps2.signal_router

Signal router.

Type: [SignalRouter](#).

FVP_MPS2_Cortex_M55.fvp_mps2.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_MPS2_Cortex_M55.fvp_mps2.spiden_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M55.fvp_mps2.spniden_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200

SSE-200 subsystem.

Type: [SSE200](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.apb_ppc_iotss_subsystem1

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: `CMSDK_DualTimer`.

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIdentity](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.signal_router

Signal router.

Type: [SignalRouter](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.timer1

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M55.fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M55.fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M55.fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M55.fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M55.fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M55.fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M55.fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M55.fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer

Type: [svos_DualTimer](#).

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M55.fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M55.fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M55.fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M55.fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M55.fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M55.fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: MPS2_TouchScreen.

FVP_MPS2_Cortex_M55.fvp_mps2.uart_overflows_or_gate

Or Gate.

Type: [OrGate](#).

16.11 FVP_MPS2_Cortex-M7

List of instances in FVP_MPS2_Cortex-M7.

FVP_MPS2_Cortex-M7 instances

FVP_MPS2_Cortex_M7

Type: `FVP_MPS2_Cortex_M7`.

FVP_MPS2_Cortex_M7.armcortexm7ct

ARM CORTEXM7 CT model.

Type: `ARM_Cortex-M7`.

FVP_MPS2_Cortex_M7.clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M7.clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M7.fvp_mps2

MPS2 DUT.

Type: `FVP_MPS2`.

FVP_MPS2_Cortex_M7.fvp_mps2.GPIO0

ARM PrimeCell General Purpose Input/Output.

Type: `CMSDK_GPIO`.

FVP_MPS2_Cortex_M7.fvp_mps2.GPIO1

ARM PrimeCell General Purpose Input/Output.

Type: `CMSDK_GPIO`.

FVP_MPS2_Cortex_M7.fvp_mps2.GPIO2

ARM PrimeCell General Purpose Input/Output.

Type: `CMSDK_GPIO`.

FVP_MPS2_Cortex_M7.fvp_mps2.GPIO3

ARM PrimeCell General Purpose Input/Output.

Type: `CMSDK_GPIO`.

FVP_MPS2_Cortex_M7.fvp_mps2.GPIO_connection_test

Type: `GPIO_Connection_Test`.

FVP_MPS2_Cortex_M7.fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: `GPIO_Port_Transfer`.

FVP_MPS2_Cortex_M7.fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: `GPIO1_Connection_Test`.

FVP_MPS2_Cortex_M7.fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_MPS2_Cortex_M7.fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_MPS2_Cortex_M7.fvp_mps2.UART0

ARM CMSDK UART Module.

Type: `CMSDK_UART`.

FVP_MPS2_Cortex_M7.fvp_mps2.UART0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M7.fvp_mps2.UART1

ARM CMSDK UART Module.

Type: `CMSDK_UART`.

FVP_MPS2_Cortex_M7.fvp_mps2.UART1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M7.fvp_mps2.UART2

ARM CMSDK UART Module.

Type: `CMSDK_UART`.

FVP_MPS2_Cortex_M7.fvp_mps2.UART2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M7.fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: `MPS2_VGA`.

FVP_MPS2_Cortex_M7.fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_Cortex_M7.fvp_mps2.ahb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M7.fvp_mps2.apb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M7.fvp_mps2.apb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M7.fvp_mps2.apb_ppc_iotss_expansion2

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M7.fvp_mps2.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M7.fvp_mps2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M7.fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: [CMSDK_SysCtrl](#).

FVP_MPS2_Cortex_M7.fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M7.fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M7.fvp_mps2.cpu_wait_or_gate_1

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dbgen_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma1.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma1.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma1_idau_labeller

Type: `LabellerIdauSecurity`.

FVP_MPS2_Cortex_M7.fvp_mps2.dma1_securitymodifier

Type: `SecurityModifier`.

FVP_MPS2_Cortex_M7.fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma2.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma2.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma2.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma2.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma3.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma3.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma3.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma3.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M7.fvp_mps2.dma3_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M7.fvp_mps2.exclusive_monitor_psram

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M7.fvp_mps2.exclusive_monitor_psram_iotss

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M7.fvp_mps2.exclusive_monitor_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M7.fvp_mps2.exclusive_monitor_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M7.fvp_mps2.exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M7.fvp_mps2.exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M7.fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_Cortex_M7.fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

FVP_MPS2_Cortex_M7.fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M7.fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M7.fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M7.fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M7.fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_MPS2_Cortex_M7.fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M7.fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M7.fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M7.fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M7.fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M7.fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M7.fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M7.fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M7.fvp_mps2.mps2_audio

MPS2 Audio.

Type: [MPS2_Audio](#).

FVP_MPS2_Cortex_M7.fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M7.fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M7.fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M7.fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M7.fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M7.fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: PVBusExclusiveMonitor.

FVP_MPS2_Cortex_M7.fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: PVBusExclusiveMonitor.

FVP_MPS2_Cortex_M7.fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: MPS2_LCD.

FVP_MPS2_Cortex_M7.fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: IoTSS_MemoryProtectionController.

FVP_MPS2_Cortex_M7.fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: SchedulerThreadEvent.

FVP_MPS2_Cortex_M7.fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: MPS2_SecureCtrl.

FVP_MPS2_Cortex_M7.fvp_mps2.mps2_timer0

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M7.fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M7.fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M7.fvp_mps2.mps2_timer1

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M7.fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M7.fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M7.fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: MPS2_Visualisation.

FVP_MPS2_Cortex_M7.fvp_mps2.niden_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M7.fvp_mps2.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M7.fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: PL022_SSP_MPS2.

FVP_MPS2_Cortex_M7.fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M7.fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M7.fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M7.fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M7.fvp_mps2.signal_router

Signal router.

Type: SignalRouter.

FVP_MPS2_Cortex_M7.fvp_mps2.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_MPS2_Cortex_M7.fvp_mps2.spiden_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M7.fvp_mps2.spniden_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200

SSE-200 subsystem.

Type: [sse200](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.apb_ppc_iotss_subsystem1

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.clock32kHz

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.clockdivider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.cpulcore_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.cpuldbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBUSExclusiveSquasher](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIIdentity](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: `IoTSS_SystemControl`.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: `IoTSS_SystemInfo`.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: `IoTSS_MessageHandlingUnit`.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: `IoTSS_MessageHandlingUnit`.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: MPS2_SecureCtrl.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.signal_router

Signal router.

Type: SignalRouter.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.timer0

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.timer1

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M7.fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M7.fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M7.fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M7.fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M7.fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M7.fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M7.fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M7.fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M7.fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer

Type: [svos_DualTimer](#).

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M7.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M7.fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

FVP_MPS2_Cortex_M7.fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

FVP_MPS2_Cortex_M7.fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: TelnetTerminal.

FVP_MPS2_Cortex_M7.fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: TelnetTerminal.

FVP_MPS2_Cortex_M7.fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: TelnetTerminal.

FVP_MPS2_Cortex_M7.fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: MPS2_TouchScreen.

FVP_MPS2_Cortex_M7.fvp_mps2.uart_overflows_or_gate

Or Gate.

Type: [OrGate](#).

16.12 FVP_MPS2_Cortex-M85

List of instances in FVP_MPS2_Cortex-M85.

About FVP_MPS2_Cortex-M85

The MPS2 platform includes many features that enable the creation of complex software. For those new to TrustZone® for Cortex®-M, however, it might be useful to run the model with some of these features disabled. Running the model with the following parameters disables the IDAU and the Security Gates:

```
--parameter idau.NUM_IDAU_REGION=0 \  
--parameter fvp_mps2.DISABLE_GATING=1
```

FVP_MPS2_Cortex-M85 has the following differences from the MPS2 specification:

- The model does not have the random number generator or unique ID/secure storage mentioned in the MPS2 specification because the programmer's view of these devices is yet to be defined.
- The Ethernet controller in the model is a LAN91C111. The MPS2 documents, including those for pre-v8-M cores, specify a LAN9220.
- MTB, ETM, and TPIU are not supported. MTB RAM is absent.
- In the Memory Gating Unit, the model provides a configurable block size. For performance reasons, the minimum block size in the model is 4096 bytes. Hardware and later models might allow smaller block sizes. Software should always use the `BLK_CFG` register to determine block size.
- As in other MPS2 Fast Models, some of the peripherals have minimal implementations:
 - The Audio controller is RAZ/WI.
 - Only the touchscreen functionality of the STMPE811 touchscreen controller is implemented.
 - A subset of the Ampire LCD module's graphics modes are supported.
- See the full set of model parameters and their descriptions by running the model with the `--list-params` argument. Most parameters share their names with a corresponding RTL configuration parameter.

FVP_MPS2_Cortex_M85.core0_bus_gasket

writes are ignored, non-word reads abort, and word reads take values from that fifo.

Type: [STLBusGasket](#).

FVP_MPS2_Cortex_M85.cpu0

ARM Cortex-M85 CT model.

Type: [ARM_Cortex-M85](#).

FVP_MPS2_Cortex_M85.cpu1

ARM Cortex-M85 CT model.

Type: [ARM_Cortex-M85](#).

FVP_MPS2_Cortex_M85.fvp_mps2

MPS2 DUT.

Type: FVP_MPS2.

FVP_MPS2_Cortex_M85.fvp_mps2.GPIO0

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M85.fvp_mps2.GPIO1

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M85.fvp_mps2.GPIO2

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M85.fvp_mps2.GPIO3

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_Cortex_M85.fvp_mps2.GPIO_connection_test

Type: GPIO_Connection_Test.

FVP_MPS2_Cortex_M85.fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: GPIO_Port_Transfer.

FVP_MPS2_Cortex_M85.fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: GPIO1_Connection_Test.

FVP_MPS2_Cortex_M85.fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M85.fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M85.fvp_mps2.UART0

ARM CMSDK UART Module.

Type: [CMSDK_UART](#).

FVP_MPS2_Cortex_M85.fvp_mps2.UART0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M85.fvp_mps2.UART1

ARM CMSDK UART Module.

Type: [CMSDK_UART](#).

FVP_MPS2_Cortex_M85.fvp_mps2.UART1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M85.fvp_mps2.UART2

ARM CMSDK UART Module.

Type: [CMSDK_UART](#).

FVP_MPS2_Cortex_M85.fvp_mps2.UART2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M85.fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: [MPS2_VGA](#).

FVP_MPS2_Cortex_M85.fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M85.fvp_mps2.ahb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_Cortex_M85.fvp_mps2.apb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_Cortex_M85.fvp_mps2.apb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_Cortex_M85.fvp_mps2.apb_ppc_iotss_expansion2

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_Cortex_M85.fvp_mps2.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M85.fvp_mps2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_Cortex_M85.fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: `CMSDK_SysCtrl`.

FVP_MPS2_Cortex_M85.fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: `CMSDK_Watchdog`.

FVP_MPS2_Cortex_M85.fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M85.fvp_mps2.cpu_wait_or_gate_1

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M85.fvp_mps2.dbgen_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_Cortex_M85.fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: `PL080_DMAC`.

FVP_MPS2_Cortex_M85.fvp_mps2.dma0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma1_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma1_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M85.fvp_mps2.dma3_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_Cortex_M85.fvp_mps2.exclusive_monitor_psram

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M85.fvp_mps2.exclusive_monitor_psram_iotss

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M85.fvp_mps2.exclusive_monitor_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M85.fvp_mps2.exclusive_monitor_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M85.fvp_mps2.exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M85.fvp_mps2.exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M85.fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_Cortex_M85.fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

FVP_MPS2_Cortex_M85.fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M85.fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M85.fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M85.fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M85.fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mps2_audio

MPS2 Audio.

Type: [MPS2_Audio](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: [MPS2_LCD](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mps2_timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mps2_timer1

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M85.fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M85.fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: MPS2_Visualisation.

FVP_MPS2_Cortex_M85.fvp_mps2.niden_or_gate

Or Gate.

Type: OrGate.

FVP_MPS2_Cortex_M85.fvp_mps2.nmi_or_gate

Or Gate.

Type: OrGate.

FVP_MPS2_Cortex_M85.fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: PL022_SSP_MPS2.

FVP_MPS2_Cortex_M85.fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M85.fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

FVP_MPS2_Cortex_M85.fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

FVP_MPS2_Cortex_M85.fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

FVP_MPS2_Cortex_M85.fvp_mps2.signal_router

Signal router.

Type: SignalRouter.

FVP_MPS2_Cortex_M85.fvp_mps2.smc_91c111

SMSC 91C111 ethernet controller.

Type: SMC_91C111.

FVP_MPS2_Cortex_M85.fvp_mps2.spiden_or_gate

Or Gate.

Type: OrGate.

FVP_MPS2_Cortex_M85.fvp_mps2.spniden_or_gate

Or Gate.

Type: OrGate.

FVP_MPS2_Cortex_M85.fvp_mps2.sse200

SSE-200 subsystem.

Type: SSE200.

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.apb_ppc_iotss_subsystem1

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**FVP_MPS2_Cortex_M85.fvp_mps2.sse200.clockdivider**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**FVP_MPS2_Cortex_M85.fvp_mps2.sse200.cmsdk_dualtimer**

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIidentity](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.signal_router

Signal router.

Type: SignalRouter.

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.timer0

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.timer1

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_Cortex_M85.fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M85.fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M85.fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M85.fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_Cortex_M85.fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M85.fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M85.fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M85.fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M85.fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer

Type: [svos_DualTimer](#).

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M85.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_Cortex_M85.fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M85.fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_Cortex_M85.fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M85.fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M85.fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_Cortex_M85.fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: [MPS2_TouchScreen](#).

FVP_MPS2_Cortex_M85.fvp_mps2.uart_overflows_or_gate

Or Gate.

Type: [OrGate](#).

16.13 FVP_MPS2_SSE-200_Cortex-M33

List of instances in FVP_MPS2_SSE-200_Cortex-M33.

About FVP_MPS2_SSE-200_Cortex-M33

The MPS2 platform includes many features that enable the creation of complex software. For those new to TrustZone® for Cortex®-M, however, it might be useful to run the model with some of these features disabled. Running the model with the following parameters disables the IDAU and the Security Gates:

```
--parameter idau.NUM_IDAU_REGION=0 \
--parameter fvp_mps2.DISABLE_GATING=1
```

FVP_MPS2_SSE-200_Cortex-M33 instances

FVP_MPS2_SSE_200_Cortex_M33

Type: FVP_MPS2_SSE_200_Cortex_M33.

FVP_MPS2_SSE_200_Cortex_M33.clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.cpu0

ARM CORTEXM33 CT model.

Type: [ARM_Cortex-M33](#).

FVP_MPS2_SSE_200_Cortex_M33.cpu1

ARM CORTEXM33 CT model.

Type: [ARM_Cortex-M33](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2

MPS2 DUT.

Type: FVP_MPS2.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.GPIO0

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.GPIO1

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.GPIO2

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.GPIO3

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.GPIO_connection_test

Type: GPIO_Connection_Test.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: GPIO_Port_Transfer.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: GPIO1_Connection_Test.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.UART0

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.UART0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.UART1

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.UART1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.UART2

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.UART2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: [MPS2_VGA](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.ahb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.apb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.apb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.apb_ppc_iotss_expansion2

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: [CMSDK_SysCtrl](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: [OrGate](#).**FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.cpu_wait_or_gate_1**

Or Gate.

Type: [OrGate](#).**FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dbgen_or_gate**

Or Gate.

Type: [OrGate](#).**FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma0**

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).**FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma0.timer**

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).**FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma0.timer.timer**

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).**FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma0.timer.timer.thread**

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).**FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma0.timer.timer.thread_event**

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).**FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma0_idau_labeller**Type: [LabellerIdauSecurity](#).**FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma0_securitymodifier**Type: [SecurityModifier](#).**FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma1**

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma1.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma1.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma1.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma1.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma1_idau_labeller

Type: `LabellerIdauSecurity`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma1_securitymodifier

Type: `SecurityModifier`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma2.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.dma3_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.exclusive_monitor_psram

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.exclusive_monitor_psram_iotss

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.exclusive_monitor_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.exclusive_monitor_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mps2_audio

MPS2 Audio.

Type: [MPS2_Audio](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: MPS2_LCD.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: IoTSS_MemoryProtectionController.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: MPS2_SecureCtrl.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mps2_timer0

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mps2_timer1

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: MPS2_Visualisation.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.niden_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: PL022_SSP_MPS2.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.signal_router

Signal router.

Type: [SignalRouter](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.smc91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.spiden_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.spniden_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200

SSE-200 subsystem.

Type: [SSE200](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.apb_ppc_iotss_subsystem1

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: `CMSDK_DualTimer`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: `PPUv0`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: `IoTSS_CPUIdentity`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: `IoTSS_SystemControl`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: `IoTSS_SystemInfo`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: `IoTSS_MessageHandlingUnit`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: `IoTSS_MessageHandlingUnit`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.signal_router

Signal router.

Type: [SignalRouter](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.timer1

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer

Type: SVOS_DualTimer.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.switch_svcs_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: [MPS2_TouchScreen](#).

FVP_MPS2_SSE_200_Cortex_M33.fvp_mps2.uart_overflows_or_gate

Or Gate.

Type: [OrGate](#).

16.14 FVP_MPS2_SSE-200_Cortex-M55

List of instances in FVP_MPS2_SSE-200_Cortex-M55.

About FVP_MPS2_SSE-200_Cortex-M55

The MPS2 platform includes many features that enable the creation of complex software. For those new to TrustZone® for Cortex®-M, however, it might be useful to run the model with some of these features disabled. Running the model with the following parameters disables the IDAU and the Security Gates:

```
--parameter idau.NUM IDAU_REGION=0 \  
--parameter fvp_mps2.DISABLE_GATING=1
```

FVP_MPS2_SSE-200_Cortex-M55 instances

FVP_MPS2_SSE_200_Cortex_M55

Type: [FVP_MPS2_SSE_200_Cortex_M55](#).

FVP_MPS2_SSE_200_Cortex_M55.clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M55.clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M55.cpu0

ARM Cortex-M55 CT model.

Type: [ARM_Cortex-M55](#).

FVP_MPS2_SSE_200_Cortex_M55.cpu1

ARM Cortex-M55 CT model.

Type: [ARM_Cortex-M55](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2

MPS2 DUT.

Type: [FVP_MPS2](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.GPIO0

ARM PrimeCell General Purpose Input/Output.

Type: [CMSDK_GPIO](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.GPIO1

ARM PrimeCell General Purpose Input/Output.

Type: [CMSDK_GPIO](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.GPIO2

ARM PrimeCell General Purpose Input/Output.

Type: [CMSDK_GPIO](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.GPIO3

ARM PrimeCell General Purpose Input/Output.

Type: [CMSDK_GPIO](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.GPIO_connection_test

Type: [GPIO_Connection_Test](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: [GPIO_Port_Transfer](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: [GPIO1_Connection_Test](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.UART0

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.UART0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.UART1

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.UART1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.UART2

ARM CMSDK UART Module.

Type: CMSDK_UART.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.UART2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: MPS2_VGA.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.ahb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.apb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.apb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.apb_ppc_iotss_expansion2

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.clock50Hz

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.clockdivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: `CMSDK_SysCtrl`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: `CMSDK_Watchdog`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: `OrGate`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.cpu_wait_or_gate_1

Or Gate.

Type: `OrGate`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dbgen_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: `PL080_DMAC`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma0.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma1_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma1_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.dma3_securitymodifier

Type: [SecurityModifier](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.exclusive_monitor_psram

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.exclusive_monitor_psram_iotss

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.exclusive_monitor_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.exclusive_monitor_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBUSExclusiveSquasher](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mps2_audio

MPS2 Audio.

Type: `MPS2_Audio`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: `CMSDK_DualTimer`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: [MPS2_LCD](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mps2_timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mps2_timer1

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: `MPS2_Visualisation`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.niden_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.nmi_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: `PL022_SSP_MPS2`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.signal_router

Signal router.

Type: `SignalRouter`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.smc_91c111

SMSC 91C111 ethernet controller.

Type: `SMSC_91C111`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.spiden_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.spniden_or_gate

Or Gate.

Type: `OrGate`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200

SSE-200 subsystem.

Type: `SSE200`.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.**FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.acg_cpu1**

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.**FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.acg_sram0**

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.**FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.acg_sram1**

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.**FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.acg_sram2**

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.**FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.acg_sram3**

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.**FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.apb_ppc_iotss_subsystem0**

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.**FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.apb_ppc_iotss_subsystem1**

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.**FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.clock32kHz**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.clockdivider**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.cmsdk_dualtimer**

ARM Dual-Timer Module.

Type: `CMSDK_DualTimer`.**FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.cmsdk_dualtimer.clk_div0**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIdentity](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: [CMSDK_Timer](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.signal_router

Signal router.

Type: SignalRouter.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.timer0

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.timer1

ARM Timer Module.

Type: CMSDK_Timer.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: RAMDevice.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer

Type: [svos_DualTimer](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: [MPS2_TouchScreen](#).

FVP_MPS2_SSE_200_Cortex_M55.fvp_mps2.uart_overflows_or_gate

Or Gate.

Type: [OrGate](#).
