Release Information**Document history**

Issue	Date	Confidentiality	Change
1100-00	31 May 2017	Non-Confidential	Update for v11.0. Document numbering scheme has changed.
1101-00	31 August 2017	Non-Confidential	Update for v11.1.
1102-00	17 November 2017	Non-Confidential	Update for v11.2.
1103-00	23 February 2018	Non-Confidential	Update for v11.3.
1104-00	22 June 2018	Non-Confidential	Update for v11.4.
1104-01	17 August 2018	Non-Confidential	Update for v11.4.2.
1105-00	23 November 2018	Non-Confidential	Update for v11.5.
1106-00	26 February 2019	Non-Confidential	Update for v11.6.
1107-00	17 May 2019	Non-Confidential	Update for v11.7.
1108-00	5 September 2019	Non-Confidential	Update for v11.8.
1108-01	3 October 2019	Non-Confidential	Update for v11.8.1.
1109-00	28 November 2019	Non-Confidential	Update for v11.9.
1110-00	12 March 2020	Non-Confidential	Update for v11.10.

Issue	Date	Confidentiality	Change
1111-00	9 June 2020	Non-Confidential	Update for v11.11.
1112-00	22 September 2020	Non-Confidential	Update for v11.12.
1113-00	9 December 2020	Non-Confidential	Update for v11.13.
1114-00	17 March 2021	Non-Confidential	Update for v11.14.
1114-01	14 April 2021	Non-Confidential	Update for FVP_Base_AEMv8R.
1115-00	29 June 2021	Non-Confidential	Update for v11.15.
1116-00	6 October 2021	Non-Confidential	Update for v11.16.
1117-00	16 February 2022	Non-Confidential	Update for v11.17.
1118-00	15 June 2022	Non-Confidential	Update for v11.18.
1118-01	26 August 2022	Non-Confidential	Update for Arm Corstone SSE-310 FVP.
1119-00	14 September 2022	Non-Confidential	Update for v11.19.
1120-00	7 December 2022	Non-Confidential	Update for v11.20.
1121-00	22 March 2023	Non-Confidential	Update for v11.21.
1122-00	14 June 2023	Non-Confidential	Update for v11.22.
1123-00	13 September 2023	Non-Confidential	Update for v11.23.
1124-00	6 December 2023	Non-Confidential	Update for v11.24.

Confidentiality Status

This document is Non-Confidential. The right to use, copy and disclose this document may be subject to license restrictions in accordance with the terms of the agreement entered into by Arm and the party that Arm delivered this document to.

Unrestricted Access is an Arm internal classification.

Product Status

The information in this document is Final, that is for a developed product.

Feedback

Arm welcomes feedback on this product and its documentation. To provide feedback on the product, create a ticket on <https://support.developer.arm.com>.

To provide feedback on the document, fill the following survey: <https://developer.arm.com/documentation-feedback-survey>.

Inclusive language commitment

Arm values inclusive communities. Arm recognizes that we and our industry have used language that can be offensive. Arm strives to lead the industry and create change.

This document includes language that can be offensive. We will replace this language in a future issue of this document.

To report offensive language in this document, email terms@arm.com.

1. Introduction

This document describes how to get started with Fixed Virtual Platforms (FVPs). It also provides a reference for FVPs for Reference Designs, Arm Architecture FVPs, and FVPs that are included in the FVP library.

1.1 Conventions

The following subsections describe conventions used in Arm documents.

Glossary

The Arm® Glossary is a list of terms used in Arm documentation, together with definitions for those terms. The Arm Glossary does not contain terms that are industry standard unless the Arm meaning differs from the generally accepted meaning.

See the Arm Glossary for more information: developer.arm.com/glossary.

Convention	Use
<i>italic</i>	Citations.
bold	Terms in descriptive lists, where appropriate.
monospace	Text that you can enter at the keyboard, such as commands, file and program names, and source code.
monospace <u>underline</u>	A permitted abbreviation for a command or option. You can enter the underlined text instead of the full command or option name.
<and>	Encloses replaceable terms for assembler syntax where they appear in code or code fragments. For example: <div>MRC p15, 0, <Rd>, <CRn>, <CRm>, <Opcode_2></div>
SMALL CAPITALS	Terms that have specific technical meanings as defined in the <i>Arm® Glossary</i> . For example, IMPLEMENTATION DEFINED , IMPLEMENTATION SPECIFIC , UNKNOWN , and UNPREDICTABLE .

Recommendations. Not following these recommendations might lead to system failure or damage.

Requirements for the system. Not following these requirements might result in system failure or damage.

Requirements for the system. Not following these requirements will result in system failure or damage.

An important piece of information that needs your attention.

A useful tip that might make it easier, better or faster to perform a task.

A reminder of something important that relates to the information you are reading.

1.2 Other information

See the Arm® website for other relevant information.

- [Arm® Developer](#).
- [Arm® Documentation](#).
- [Technical Support](#).
- [Arm® Glossary](#).

1.3 Useful resources

This document contains information that is specific to this product. See the following resources for other useful information.

Access to Arm documents depends on their confidentiality:

- Non-Confidential documents are available at developer.arm.com/documentation. Each document link in the following tables goes to the online version of the document.
- Confidential documents are available to licensees only through the product package.

Arm tests its PDFs only in Adobe Acrobat and Acrobat Reader. Arm cannot guarantee the quality of its documents when used with any other PDF reader.

Adobe PDF reader products can be downloaded at <http://www.adobe.com>.

2. Introduction to FVPs

Fixed Virtual Platforms (FVPs) enable software development without the need for real hardware.

They are available for Linux and Windows hosts, either:

- As source code examples in the Fast Models package, with the tools required to customize and build them. For more information, see the [Fast Models Reference Guide](#).
- As a set of pre-built executables in the FVP Standard Library package. This package is downloadable from [Fixed Virtual Platforms](#).

FVPs are available for all Cortex®-A, Cortex®-R, Cortex®-M, and Neoverse™ processors, and most of them support the CADI, MTI, and Iris interfaces, so can be used for debugging and for trace output.

The scope of this document is the following pre-built FVPs, which are downloadable from Arm Developer:

- FVPs that are included in the FVP Standard Library.
- Arm Architecture FVPs, downloadable from [Fixed Virtual Platforms](#).
- Arm Ecosystem FVPs, downloadable from [Arm Ecosystem FVPs](#).

2.1 Types of FVP

Most Fast Models FVPs are provided in a single license-managed library. In addition, some Architecture Envelope Model (AEM) FVPs are available for download without requiring a license.

Fast Models FVPs are based on the following platforms:

- Base Platform.
- BaseR Platform.
- Arm® Versatile™ Express development boards.
- Arm® MPS2 or Arm® MPS2+ platforms, for Cortex®-M series processors.

FVPs can be obtained in the following ways:

- License-managed FVPs, including some plug-ins and utilities, are provided in the FVP Standard Library. It is available for Windows or Linux hosts. For information on how to download it, see [Fixed Virtual Platforms](#) on Arm Developer.
- Free-of-charge AEM FVPs can be downloaded from [Arm Architecture Models](#) on Arm Developer without a license. They are available for Linux hosts only. The following FVPs are available:
 - Foundation Platform. This is a basic FVP with a minimal peripheral set. It includes a single cluster which can be configured with 1-4 AEMvA cores. It is suitable for running bare-metal

applications and for booting Linux. It supports the CADI debug interface, but does not support MTI or Iris interfaces. It is documented in the [Foundation Platform User Guide](#).

- Armv-A Base Platform RevC FVP. This is a platform model with a more extended peripheral set than the Foundation Platform. It has two clusters, each of which can be configured with 1-4 AEMvA cores. It supports Arm®v8-A architecture versions up to v8.7 and Armv9-A. It also supports CADI, MTI, and Iris debug and trace interfaces.
 - Arm®v8-R AEM FVP. This FVP includes a single cluster of 1-4 AEMv8-R cores. It allows you to target AArch32 or AArch64, RAS, VFP, EL2, and other Arm®v8-R features.
 - Armv-A Compliance FVP. This FVP is optimized for validating CPU implementations and can be used with the A-profile Architecture Compliance Kit (ACK) to demonstrate compliance with the Arm® architecture specification.
- Free-of-charge Arm Ecosystem FVPs, including Reference Design FVPs and the Morello Platform FVP can be downloaded from [Arm Ecosystem FVPs](#) on Arm Developer.

Arm provides validated Linux and Android deliverables for FVPs. For details, see the [Arm Development Platforms wiki](#) on Arm Community. To get started with Linux on FVPs, see [FVPs](#) on Arm Community.

3. Getting Started with Fixed Virtual Platforms

This chapter describes how to use FVPs.

3.1 Requirements for FVPs

FVPs can run on a Windows or Linux host machine.

Host machine

Architecture

x86-64 and Arm® AArch64 host platforms are supported.

Minimum specification

At least 2GB RAM, preferably 4GB.

2GHz Intel Core2Duo, or similar, that supports the MMX, SSE, SSE2, SSE3, and SSSE3 instruction sets.

Recommended specification

At least double the RAM of the platform you intend to simulate. For example, a simulated platform containing 8GB of DRAM should be run on a 16GB host machine.

Fast Models and associated FVPs benefit most from high single-threaded performance. For example, a high frequency (4-5GHz) Intel Core i9 or i7 or AMD Ryzen 9 or 7 host CPU gives a significant improvement, between 30-60%, over Intel Xeon cores (2-3 GHz).

Operating system

Linux

Red Hat Enterprise Linux 7 or 8 (for 64-bit architectures), Ubuntu 18.04, 20.04, or 22.04 Long Term Support (LTS).

Windows

Microsoft Windows 10 64-bit.

Compiler

FVPs are built with Visual Studio 2019 and GCC 9.3.0.

Licensing

Fast Models and FVPs use either User-Based Licensing or FlexNet Licensing. Arm user-based licensing is only available to customers with a user-based licensing license. Documentation for user-based licensing is available at <https://lm.arm.com>. For assistance with user-based licensing issues, visit <https://developer.arm.com/support> and open a support case.

For FlexNet Publisher node-locked or floating licensing, the latest version of the FlexNet software is available for download from [License Server Management Software](#).

3.2 Contents of the FVP Standard Library package

The FVP Standard Library consolidates commonly used FVPs into a single package which also contains some useful plug-ins and utilities.

These FVPs are documented in the chapters [13. Base Platform FVPs](#) on page 102, [14. BaseR Platform FVPs](#) on page 1417, [15. VE Platform FVPs](#) on page 1572, and [16. MPS2 Platform FVPs](#) on page 2030.

Note

- The FVPs are supplied as pre-built executables. For the source code for these and other FVPs, install the main Fast Models product.
- The package does not include unlicensed FVPs. These are available for download separately, from [Arm Architecture Models](#) on Arm Developer.

The package installs the FVPs under the `models` directory. It also installs:

Plug-ins

Plug-ins are DLLs or shared objects that provide extra functionality to FVPs, for instance different types of trace output. To load a plug-in, pass the name of the plug-in to the FVP at startup using the `--plugin` command-line option or using the `FM_TRACE_PLUGINS` environment variable. For more information about plug-ins, see [Plug-ins for Fast Models](#) in the *Fast Models Reference Guide*.

Model Shell and Model Debugger

Model Shell is a command-line tool for launching FVPs. For more information about Model Shell, see [Model Shell for Fast Models Reference Guide](#). Model Debugger is an easy to use symbolic debugger with a GUI that allows you to debug software running on the FVP. For more information about Model Debugger, see [Model Debugger for Fast Models User Guide](#). They are installed in the `bin` directory.

iris.debug Python module

iris.debug is a Python scripting interface to Fast Models. It allows you to interact with FVPs, including connecting to and configuring them, performing execution control, and accessing registers and memory. It is installed under the `iris` directory. For more information about iris.debug, see [Iris Python Debug Scripting User Guide](#).

3.3 FVP command-line options

Specify these options when you launch an FVP from the command line. You can specify these options in any order.

Table 3-1: CADI or Iris-related options

Short form	Long form	Description
	<code>--iris-connect conspec</code>	<p>Start the Iris server according to the connection specification <i>conspec</i>. <i>conspec</i> is a structured string argument which can contain flags and parameters.</p> <p>Use <code>--iris-connect help</code> to print a list and description of all available Iris connection types.</p> <p>The following options are ignored when using <code>--iris-connect</code>:</p> <ul style="list-style-type: none"> <code>--iris-server</code> <code>--iris-allow-remote</code> <code>--iris-port</code> <code>--iris-port-range</code> <p>To set these connection parameters, use:</p> <pre>--iris-connect tcpserver[,port=PORT][,endport=ENDPORT][,allowRemote]</pre> <p>This command starts the TCP server on the first free port in the range <i>PORT-ENDPORT</i>, where the default for <i>PORT</i> is 7100 and the default for <i>ENDPORT</i> is <i>PORT</i> + 63. Only local connections are allowed, unless <i>allowRemote</i> is specified.</p> <p>The other supported connection type is <code>socketfd=FD</code> which uses the socket file descriptor <i>FD</i> as an established UNIX domain socket connection.</p> <p>Use <code>--iris-connect verbose=n</code> to set the logging level of the <code>IrisTcpServer</code>, where <i>n</i> is 0-3.</p>
<code>-S</code>	<code>--cadi-server</code>	Start a CADI server. This option allows a CADI-enabled debugger to connect to targets in the simulation. To shut down the server, return to the command window that you used to start the model and press Ctrl+C .
<code>-I</code>	<code>--iris-server</code>	<p>Start an Iris server. This option allows an Iris-enabled debugger to connect to targets in the simulation.</p> <p>Note: This option is deprecated. Use <code>--iris-connect</code> instead.</p>
<code>-R</code>	<code>--run</code>	<p>Run the simulation immediately after the CADI or Iris server is started.</p> <p>Use this option with <code>--cadi-server</code> or <code>--iris-server</code>.</p> <p>The default is to wait until the debugger has connected before running.</p>
<code>-L</code>	<code>--cadi-log</code>	<p>Log all CADI function calls made during the simulation into XML files.</p> <p>One log file is created for each CADI target. The log files are created in the current working directory.</p> <p>The filename format is:</p> <pre>CADIlog-<TargetInstanceName>-<ProcessID>.xml</pre>

Short form	Long form	Description
-i	--iris-log	<p>Log to stdout all Iris function calls that were made during the simulation.</p> <p>There are 5 possible log levels. To set a level greater than 1, specify the option multiple times, for example <code>-ii</code> for level 2.</p> <p>The log levels have the following meanings:</p> <p>0</p> <p>Logging is disabled. This value is the default.</p> <p>1</p> <p>Log messages use a compact single-line format.</p> <p>2</p> <p>Log messages use a single-line pseudo-JSON format.</p> <p>3</p> <p>Log messages use a more readable, multi-line pseudo-JSON format.</p> <p>4</p> <p>As 3 but also prints the U64JSON hex value of the message.</p> <p>Note: To set the Iris log level for all FVP invocations, use the <code>IRIS_GLOBAL_INSTANCE_LOG_MESSAGES</code> environment variable.</p>
-A	--iris-allow-remote	<p>Start an Iris server and allow connections to it from a remote workstation.</p> <p>The default is disallowed.</p> <p>Note: This option is deprecated. Use <code>--iris-connect</code> instead.</p>
-p	--print-port-number	<p>Print the port number on which the Iris or CADI server is listening.</p> <p>Use this option with <code>--iris-server</code> or <code>--cadi-server</code>.</p> <p>Tip: This option can be useful if you need to specify the port number when you connect a client to the debug server.</p>
	--iris-port <i>n</i>	<p>Set a port to use for the Iris server.</p> <p>Use this option with <code>--iris-server</code>.</p> <p>The default is 7100.</p> <p>Note: This option is deprecated. Use <code>--iris-connect</code> instead.</p>

Short form	Long form	Description
	<code>--iris-port-range <i>min:max</i></code>	<p>Set the range of ports to scan when starting an Iris server. The server uses the first available port in the range.</p> <p>Use this option with <code>--iris-server</code>.</p> <p>Note: This option is deprecated. Use <code>--iris-connect</code> instead.</p>

Table 3-2: Output-related options

Short form	Long form	Description
	<code>--list-instances</code>	<p>Print a list of model instances to standard output, then exit the simulation.</p> <p>Use this option to help identify the correct syntax for configuration files, and to find out what instances the target supplies.</p>
<code>-l</code>	<code>--list-params</code>	<p>Print a list of the available model parameters and their default values to standard output, then exit the simulation.</p> <p>Tip: If you are loading a plug-in, this option also lists the plug-in parameters.</p>
	<code>--list-set-params <i>filename</i></code>	<p>Save a list of the set model parameter values for each component to a file. If <i>filename</i> is <code>-</code>, print to standard output instead.</p> <p>An alternative to this command-line option is to use the <code>FASTSIM_LOGPARAMS</code> and <code>FASTSIM_LOGPARAMS_FILE</code> environment variables:</p> <ul style="list-style-type: none"> To log parameter values to stdout, set <code>FASTSIM_LOGPARAMS</code> to 1. To log parameter values to a file, additionally set <code>FASTSIM_LOGPARAMS_FILE</code> to the name of the file.
	<code>--dump-params</code>	Dump the list of model parameters into a JSON file called <code>parameter_list.json</code> , then exit the simulation. The file is created in the current working directory.
	<code>--list-regs</code>	Print model register information to standard output, then exit the simulation.
	<code>--check-regs</code>	Same as <code>--list-regs</code> but with extra consistency checks on the CADI register API.
<code>-o</code>	<code>--output <i>filename</i></code>	<p>Redirect output from the <code>--list-instances</code>, <code>--list-memory</code>, <code>--list-params</code>, and <code>--list-regs</code> commands to a file.</p> <p>If this option is used with <code>--list-params</code>, the contents of the output file are formatted correctly for use as input by the <code>--config-file</code> option.</p>
	<code>--log <i>filename</i></code>	Log all SystemC reports into <i>filename</i> .

Short form	Long form	Description
	<code>--stat</code>	<p>Print the following performance statistics on simulation exit:</p> <p>Simulated time An estimate of the time that the workload would have taken on the modeled hardware.</p> <p>User time Time in wall clock seconds that the host CPU spent running in user mode.</p> <p>System time Time in wall clock seconds that the host CPU spent running in system mode.</p> <p>Wall time Time in wall clock seconds between the simulation starting and stopping.</p> <p>Performance index An estimate of the accuracy of the simulation performance. This value is Simulated time divided by Wall time.</p>
<code>-P</code>	<code>--prefix</code>	Prefix each line of semihosting output with the name of the target instance.
<code>-h</code>	<code>--help</code>	Print the help message and exit.
	<code>--version</code>	Print version information for the FVP.
<code>-q</code>	<code>--quiet</code>	Suppress informational output.
<code>-K</code>	<code>--keep-console</code>	Keep the console window open after completion. This option applies to Windows hosts only.
	<code>--disable-model-exitcode</code>	Disable the simulation from retrieving the exit code returned by a model or a plug-in. By default, it is enabled.

Table 3-3: Run control options

Short form	Long form	Description
	<code>--cpulimit <i>n</i></code>	<p>Maximum number of wall-clock seconds for the simulation process to be active. This value excludes simulation startup and shutdown.</p> <p>This option is ignored if a debug server is started.</p> <p>The default is unlimited.</p>
	<code>--cyclelimit <i>n</i></code>	<p>Maximum number of cycles to run.</p> <p>This option is ignored if a debug server is started.</p> <p>The default is unlimited.</p>
<code>-T</code>	<code>--timelimit <i>n</i></code>	Maximum number of wall-clock seconds for the simulation to run, excluding startup and shutdown. To terminate the model immediately after initialization, specify <code>--timelimit 0</code> .
	<code>--simlimit <i>n</i></code>	<p>Maximum number of seconds to simulate.</p> <p>This option is ignored if a debug server is started.</p> <p>The default is unlimited.</p> <p>Like the <code>Simulated time</code> value output by <code>--stat</code>, this value is measured in simulation seconds, not wall-clock seconds.</p>

Short form	Long form	Description
-b	<code>--break [instance=] [threadid:][memspace@] address</code>	<p>Set a program breakpoint on the address of an instruction, where:</p> <ul style="list-style-type: none"> <code>threadid</code> is an optional thread id, for a thread-specific breakpoint. <code>memspace</code> is an optional name or id of the memory space that <code>address</code> is in. If not specified, the breakpoint is set on the first program memory space found. If the FVP has multiple cores, you must specify an instance, for example: <pre>-b FVP_Base_AEMvA.cluster0.cpu0=0x800010eC</pre> <p>This option can be specified multiple times.</p>

Table 3-4: Timing and performance options

Short form	Long form	Description
	<code>--cpi-file filename</code>	<p>Use <i>filename</i> to set the Cycles Per Instruction (CPI) class.</p> <p>For information about CPI files, see Timing Annotation.</p>
-Q	<code>--quantum n</code>	Number of ticks to simulate for each quantum. The default is 10000.
-M	<code>--min-sync- latency n</code>	Number of ticks to simulate before synchronizing. Events that occur at a higher frequency than this value are missed. The default is 100.
	<code>--fast-ram filename</code>	Enable FastRAM and load the configuration from <i>filename</i> . For more information about FastRAM, see FastRAM .

Table 3-5: Memory-related options

Short form	Long form	Description
	<code>--dump file@address,size</code>	<p>Dump a section of memory to a file at model shutdown. This option can be specified multiple times. The full syntax is:</p> <pre>--dump [instance=] file@[memspace:]address,size</pre> <p>Tip: To see the list of instances and memory spaces, use the <code>--list-memory</code> option.</p>
	<code>--data file@address</code>	<p>Write raw data contained in <i>file</i> to the specified address. This option can be specified multiple times. The full syntax is:</p> <pre>--data [instance=] file@[memspace:]address</pre>
	<code>--list-memory</code>	Print model memory information to standard output, then exit the simulation.
	<code>--start [instance=] address</code>	<p>Set the initial PC value to this address, overriding the <code>.axf</code> start address.</p> <p>Note:</p> <ul style="list-style-type: none"> Use this option if you do not want the CPU to start executing at the default reset address. You do not normally need to do this if you are loading an ELF file using <code>--application</code>. This option can be used with <code>--data</code> to load binary data that is not in an ELF file.

Table 3-6: Configuration options

Short form	Long form	Description
-C	<code>--parameter <i>instance.parameter=value</i></code>	Set a parameter. This option can be specified multiple times. Specify the full hierarchical name of the parameter. This option is also used to set plug-in parameters.
-f	<code>--config-file <i>filename</i></code>	Load the parameters from a configuration file.

Table 3-7: Options for loading a plug-in or application

Short form	Long form	Description
-a	<code>--application [<i>instance=</i>] <i>filename</i></code>	Load an application. On a multi-core system, specify the instance, or use * to load the application image into all the cores in a cluster: <code>-a cluster0.cpu*=<i>file</i></code>
	<code>--plugin <i>filename</i></code>	Load the plug-in <i>filename</i> . This option can be specified multiple times. You can also load plug-ins using the FM_TRACE_PLUGINS environment variable. For information about plug-ins, see Plug-ins for Fast Models .
	<code>--trace-plugin <i>filename</i></code>	Load a trace plug-in. Note: This option is deprecated. Use <code>--plugin</code> instead.

3.4 Loading and running an application on an FVP

There are different ways to launch an FVP, for example from the command prompt, or from Model Debugger or Arm® Development Studio.

To run an FVP from the command prompt, enter the model name followed by the model options. To see all available options, use the `--help` option. This is a list of some of the commonly used options for FVPs:

-a [*instance=*]*filename.axf*

Specifies an application to load, and optionally, the instance or instances to load it on. The file can be in one of the following formats, or in a gzip-compressed version:

- ELF.
- Motorola S-Record.

If the FVP contains multiple core instances, you can specify the instance to load the image on. The instance name can include a wildcard (*) to load the same application image into multiple cores, for example:

```
./FVP_Base_AEMvA -a cluster0.cpu*=__image.axf
```

Omitting the instance name loads the application on all cores in the first cluster. If the FVP has multiple cores but no clusters, you must specify the instance name.

--data *filename.bin@address*

Loads binary data into memory at the address specified.

-C *instance.parameter=value*

Sets a single model parameter. Parameters are specified using a path that separates the instance names and the parameter using dots. For example, `-c bp.flashloader0.fname=fip.bin`. Here, `bp` and `flashloader0` are instance names and `fname` is the parameter. To set multiple parameters using a configuration file, use the `-f` option instead. To list all the available parameters, with their type, default value, and description, run the model with the `--list-params`, or `-l` option.

-f *config_file.txt*

Specifies the name of a plain text configuration file. Configuration files simplify managing multiple model parameters. You can set the same parameters using this option as with the `-c` option.

-S

Starts a CADI debug server. This option allows a CADI-enabled debugger, such as Model Debugger or Arm® Development Studio Debugger, to connect to the running model. By default, the model waits for the debugger to connect before starting.

Related information

[Arm Development Studio Getting Started Guide](#)
[Using Model Debugger](#)

3.5 Configuring the model

When you start the model from the command line, you can configure it using either:

- One or more `-c` command-line arguments.
- A configuration file and the `-f` command-line argument.

Each `-c` command-line argument or line in the configuration file must contain:

- The name of the component instance.
- The parameter to modify.
- Its value.

Use the following format:

instance.parameter=value

The *instance* can be a hierarchical path, with each level separated by a dot . character.

- Comment lines in the configuration file begin with a # character.
- You can set Boolean values using either `true` or `false`, or 1 or 0.

You can generate a configuration file with all parameters set to default values by using the `-o` option to redirect the output from the `--list-params` option, for example:

```
FVP_Base_AEMvA.exe --list-params -o params.txt
```

3.6 FVP debug

This section describes how to debug an FVP.

FVP debug options

To debug an FVP, you can either:

- Run the FVP from within a CADI-enabled debugger.
- Start the FVP with the `-s` command-line argument and then connect a CADI-enabled debugger to it.

For information about using your debugger in these ways, see your debugger documentation.

Semihosting support

Semihosting enables code running on a platform model to directly access the I/O facilities on a host computer. Examples of these facilities include console I/O and file I/O.

The simulator handles semihosting by intercepting `HLT 0xF000`, `svc 0x123456`, or `svc 0xAB`, depending on whether the processor is in A64, A32 or T32 state. It handles all other `HLTs` and `svcs` as normal.

If the operating system does not use `HLT 0xF000`, `svc 0x123456`, or `svc 0xAB` for its own purposes, it is not necessary to disable semihosting support to boot an operating system.

To temporarily or permanently disable semihosting support for a current debug connection, see your debugger documentation.

Related information

[Semihosting for AArch32 and AArch64](#)

[Using semihosting to access resources on the host computer](#)

3.7 Using the CLCD window

When an FVP starts, the CLCD window opens, representing the contents of the simulated color LCD frame buffer. It automatically resizes to match the horizontal and vertical resolution that is set in the CLCD peripheral registers.

MPS2 FVPs

The LEDs and MCC switches in the CLCD window for MPS2-based FVPs correspond to the LEDs and switches on the physical board. They are controlled by the software that you load onto the FVP. For information on how to use them, see [User switches and user LEDs](#) in the Arm® MPS2 and MPS2+ FPGA Prototyping Boards TRM on Arm Developer.

Base Platform and VE FVPs

The top section of the CLCD window for Base Platform and VE FVPs displays the status information:

Figure 3-1: Base Platform CLCD window in its default state at startup

USERSW

Eight white boxes show the state of the User DIP switches.

These represent switch S6 on the VE hardware, USERSW[8:1], which is mapped to bits [7:0] of the SYS_SW register at address 0x1C010004.

The switches are in the off position by default. To change its state, click in the area above or below a white box.

BOOTSW

Eight white boxes show the state of the VE Boot DIP switches.

These represent switch S8 on the VE hardware, BOOTSEL[8:1], which is mapped to bits [15:8] of the SYS_SW register at address 0x1C010004.

The switches are in the off position by default.

Changing Boot DIP switch positions while the model is running can result in unpredictable behavior.

S6LED

Eight colored boxes indicate the state of the VE User LEDs.

These represent the red/yellow/green LEDs on the VE hardware, which are mapped to bits [7:0] of the SYS_LED register at address 0x1C010008.

Daughter

Eight white boxes show the state of the daughterboard DIP switches and eight colored boxes show the state of the daughterboard LEDs.

Total Instr

A counter showing the total number of instructions executed.

Because the FVP models provide a *Programmer's View* (PV) of the system, the CLCD displays total instructions rather than total processor cycles. Timing might differ substantially from the hardware because:

- Bus fabric is simplified.
- Memory latencies are minimized.
- Cycle approximate processor and peripheral models are used.

In general, bus transaction timing is consistent with the hardware, but the timing of operations within the model is not accurate.

Total Time

A counter showing the total elapsed time, in seconds.

This time is wall clock time, not simulated time.

Rate Limit

A feature that disables or enables fast simulation.

Because the system model is highly optimized, your code might run faster than it would on real hardware. This effect might cause timing issues.

Rate Limit is disabled by default to favor simulation speed. Enable it to restrict simulation time so that it more closely matches real time.

To enable or disable Rate Limit, click the square button. You can also configure this option when instantiating the model with the `rate_limit-enable` visualization component parameter.

When you click the **Total Instr** item in the CLCD, the display toggles to show the following:

Instr/sec

The number of instructions that execute per second of wall clock time.

Perf Index

The ratio of real time to simulation time. The larger the ratio, the faster the simulation runs. If you enable the Rate Limit feature, the Perf Index approaches unity.

You can reset the simulation counters by resetting the model.

The FVP CLCD displays the core run state for each core on each cluster using a colored icon. The icons are to the left of the **Total Instr** (or **Instr/sec**) item.

Figure 3-2: Core run state icons for a dual-cluster, quad-core model

Table 3-8: Core run state icon descriptions

Icon	State label	Description
	UNKNOWN	Run status unknown, that is, simulation has not started.
	RUNNING	Core running, is not idle, and is executing instructions.
	HALTED	External halt signal asserted.
	STANDBY_WFE	Last instruction executed was WFE and standby mode has been entered.
	STANDBY_WFI	Last instruction executed was WFI and standby mode has been entered.
	IN_RESET	External reset signal asserted.
	DORMANT	Partial core power down.
	SHUTDOWN	Complete core power down.

If the CLCD window has focus:

- Any keyboard input is translated to PS/2 keyboard data.
- Any mouse activity over the window is translated into PS/2 relative mouse motion data. The data is then streamed to the KMI peripheral model FIFOs.

The simulator only sends relative mouse motion events to the model. As a result, the host mouse pointer does not necessarily align with the target OS mouse pointer.

You can hide the host mouse pointer by pressing the **left Ctrl+left Alt** keys. Press the keys again to redisplay the host mouse pointer. Only the **left Ctrl** key is operational. The **right Ctrl** key does not have the same effect.

If you prefer to use a different key, configure it with the `trap_key` visualization component parameter.

3.8 Ethernet with VE FVPs

This section describes how to use Ethernet with VE FVPs.

Using Ethernet with VE FVPs

The VE FVPs have a virtual Ethernet component. This component is a model of the SMSC 91C111 Ethernet controller, and uses a TAP device to communicate with the network. By default, the Ethernet component is disabled.

Host requirements

Before you can use the Ethernet capability of VE FVPs, set up your host computer.

Target requirements

This section describes the target requirements.

Target requirements - about

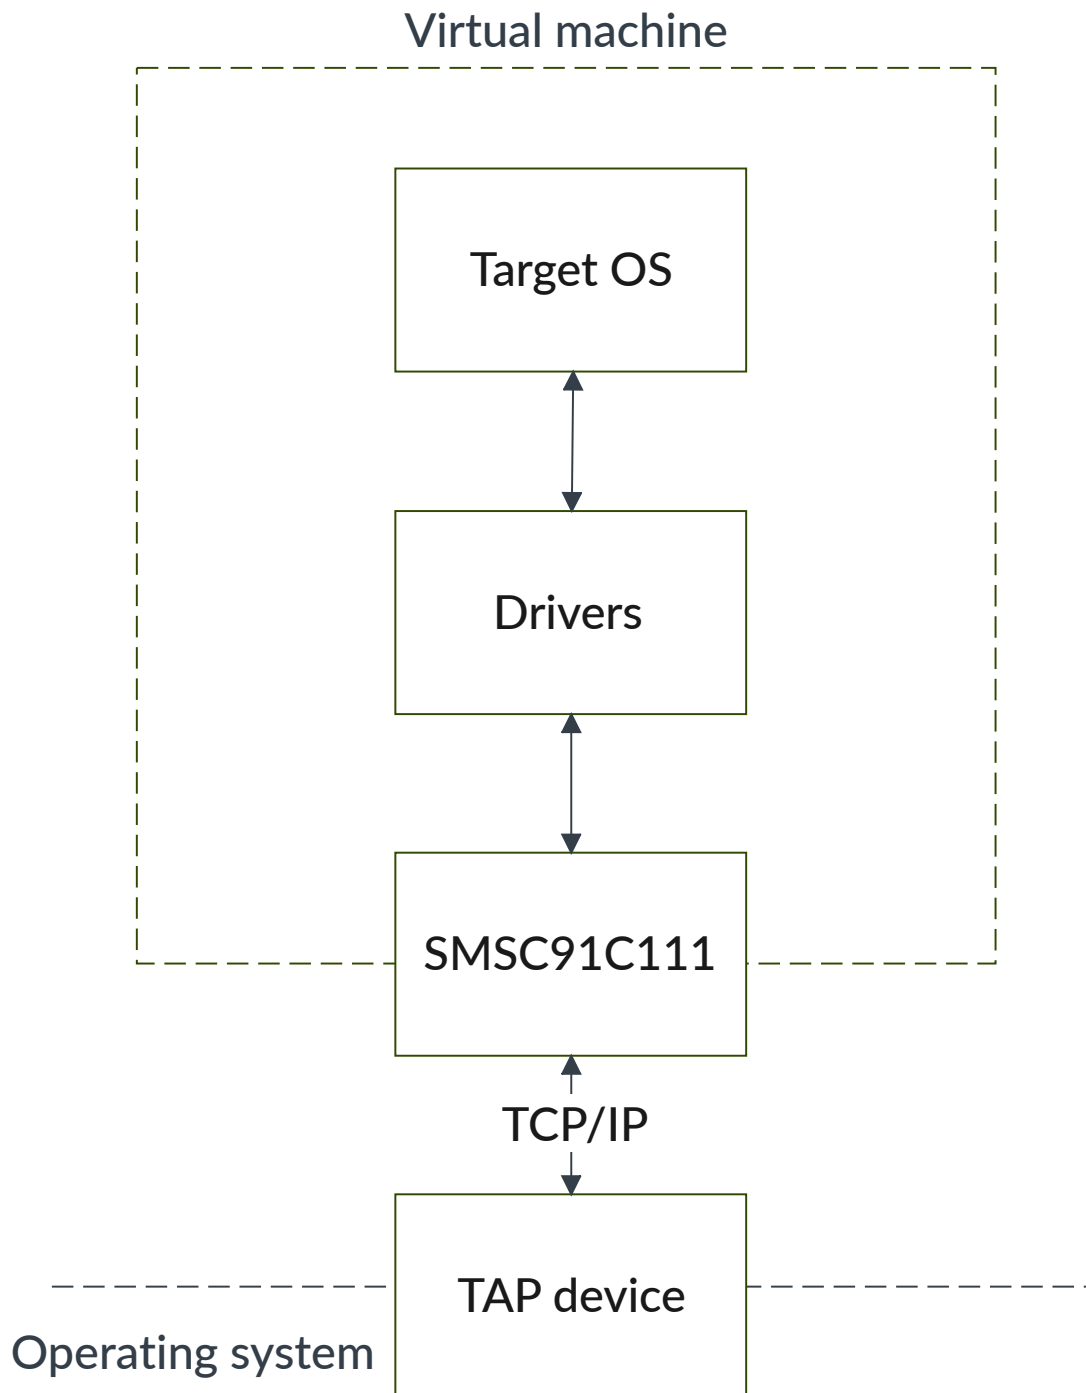

The VE FVPs include a software implementation of the SMSC 91C111 Ethernet controller. Your target OS must therefore include a driver for this specific device. To use the SMSC chip, configure the kernel. Linux supports the SMSC 91C111.

The configurable SMSC 91C111 component parameters are:

- `enabled`.
- `mac_address`.
- `promiscuous`.

enabled

When the device is disabled, the kernel cannot detect the device.

Figure 3-3: Model networking structure block diagram

To perform read and write operations on the TAP device, configure a HostBridge component. The HostBridge component is a virtual *Programmer's View* (PV) model. It acts as a networking

gateway to exchange Ethernet packets with the TAP device on the host, and to forward packets to NIC models.

mac_address

There are two options for the `mac_address` parameter.

If a MAC address is not specified, when the simulator is run it takes the default MAC address, which is randomly generated. This random generation provides some degree of MAC address uniqueness when running models on multiple hosts on a local network.

promiscuous

The Ethernet component starts in promiscuous mode by default. In this mode, it receives all network traffic, even any not addressed to the device. Use this mode if you are using a single network device for multiple MAC addresses. Use this mode if, for example, you share the network card between your host OS and the VE FVP Ethernet component.

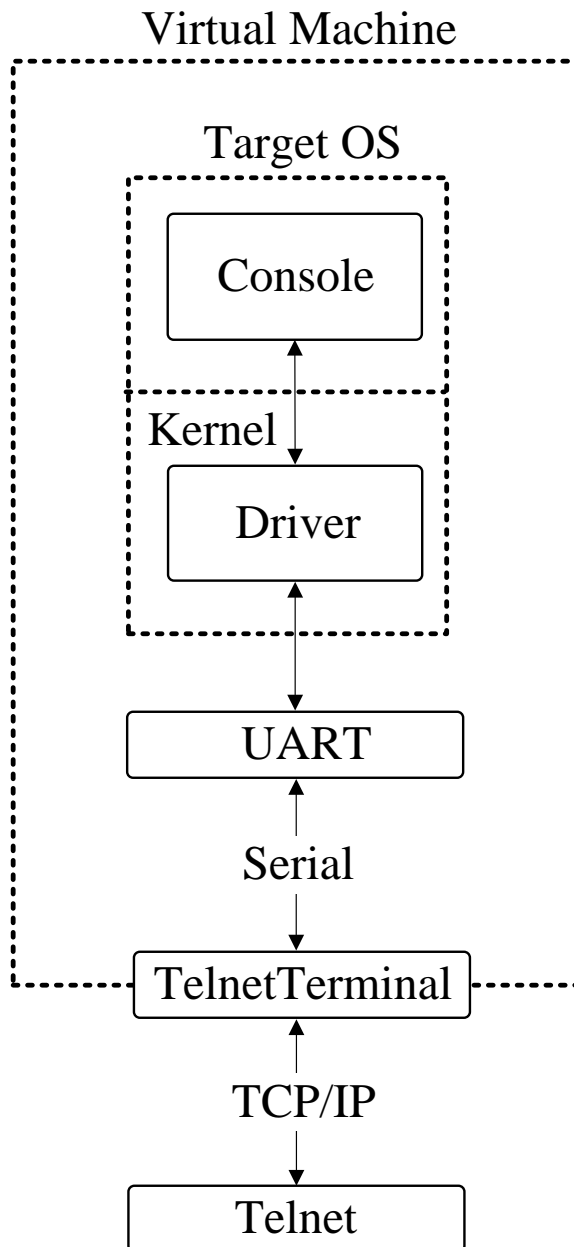

By default, the Ethernet device on the VE FVP has a randomly generated MAC address and starts in promiscuous mode.

3.9 Using a terminal with a system model

The `TelnetTerminal` component is a virtual component that enables UART data to be transferred between a TCP/IP socket on the host and a serial port on the target.

Using TelnetTerminal

The following figure shows a block diagram of one possible relationship between the target and host through the `TelnetTerminal` component. The `TelnetTerminal` block is what you configure when you define Terminal component parameters. The Virtual Machine is an FVP.

Figure 3-4: Terminal block diagram

On the target side, the console process that is invoked by your target OS relies on a suitable driver being present. Such drivers are normally part of the OS kernel. The driver passes serial data through a UART. The data is forwarded to the TelnetTerminal component. When the simulation is started and the TelnetTerminal component is enabled, the component opens a server (listening) socket on a TCP/IP port. This is port 5000 by default. This port can be connected to by, for example, a Telnet process on the host.

When data becomes available on the network socket, the TelnetTerminal component buffers the data, which can then be read from SerialData.

If there is no connection to the network socket when the first data access is made, and the `start_telnet` parameter is true, a host Telnet session is started automatically. Prior to this first access, you can connect a client of your choice to the network socket.

If the connection between the TelnetTerminal component and the client is broken at any time, for example by closing a client Telnet session, the port is re-opened on the host, permitting you to make another client connection. This could have a different port number if the original one is no longer available.

The port number of a particular TelnetTerminal instance can be defined when your model system starts. The actual value of the port used by each TelnetTerminal is declared when it starts or restarts, and might not be the value that you specified if the port is already in use. If you are using Model Shell, the port numbers are displayed in the host window in which you started the model.

Microsoft Windows 10 disables the Telnet client by default. Follow these steps to enable it:

Note

1. Select **Start > Settings**.
 2. In the search box, type **Turn Windows features on or off**. The **Windows Features** dialog opens.
 3. Select the **Telnet Client** check box and click **OK**. The installation might take several minutes to complete.
-

TelnetTerminal parameters

To set the parameters, the syntax to use in a configuration file or on the command line is:

```
motherboard.terminal_x.parameter=value
```

where *x* is the terminal identifier and can be 0, 1, 2, or 3.

You can start the TelnetTerminal component in either of the following modes, depending on the `mode` parameter:

telnet

In Telnet mode, the terminal component supports a subset of the RFC 854 protocol. This means that the terminal participates in negotiations between the host and client concerning what is and is not supported, but there is no flow control.

raw

In raw mode the byte stream passes unmodified between the host and the target. The terminal does not participate in initial capability negotiations between the host and client. Instead it acts as a TCP/IP port. You can use this feature to directly connect to your target through the TelnetTerminal component. This permits a debugger connection, for example, to connect a gdb client to a gdbserver running on the target operating system.

The `terminal_command` parameter specifies the command line used to launch a terminal application and connect to the opened TCP port. The `TelnetTerminal` component replaces the keywords `%port` and `%title`, if specified, with the opened port number and component name, respectively. After replacing `%port` and `%title`, the command line is executed verbatim.

An empty string, which is the default, launches `xterm` on Linux or `telnet.exe` on Windows.

If you specify a non-empty string, it must include `%port`, but `%title` is optional.

For example:

```
fvp_mps2.telnetterminal0.terminal_command="putty.exe -telnet localhost %port"
```

3.10 Virtio P9 device component

The `VirtioP9Device` component is included in Base, BaseR, and A-profile VE platforms. It implements a subset of the Plan 9 file protocol over a virtio transport. It enables accessing a directory on the host's filesystem within Linux, or another operating system that implements the protocol, running on a platform model.

Setting up the VirtioP9Device component

Take the following steps to set up this component:

- Use a version of Linux that supports v9fs over virtio and virtio-mmio devices.
- Update the device tree to include the `VirtioP9Device` component, or specify it on the kernel command-line, as shown below. The address range for both VE and Base platforms is `0x1C140000-0x1C14FFFF`.
The interrupt number is 43, or IRQ 75, for both VE and Base platforms.
- Set the following parameter to the directory on the host that you want to mount in the model:

VE:

```
motherboard.virtiop9device.root_path
```

Base:

```
bp.virtiop9device.root_path
```

- On Linux, mount the host directory by using the following command in the model:

```
$ mount -t 9p -o trans=virtio,version=9p2000.L FM <mount point>
```

Example kernel command-line argument:

```
virtio_mmio.device=0x10000@0x1c140000:75
```

Example entry for DTS files, to add next to the corresponding `virtio_block` entry:

```
virtio_p9@0140000 {  
    compatible = "virtio,mmio";  
    reg = <0x0 0x1c140000 0x0 0x1000>;  
    interrupts = <0x0 0x2b 0x4>;  
};
```

4. Arm® CoreLink™ SGI-575 reference design FVP

The SGI-575 FVP provides a software model of the Arm® CoreLink™ SGI-575 System Guidance for Infrastructure reference subsystem. It drives system architecture and software standardization and provides software and binaries of proprietary firmware that reduce the amount of work that is required for SoC development.

The FVP is used with the SGI-575 software package.

See the Arm® CoreLink™ SGI-575 System Guidance for Infrastructure Software Bundle Readme for instructions on how to set up and run the FVP.

4.1 About the SGI-575 FVP

The SGI-575 Fixed Virtual Platform (FVP) models multiple IP components.

It does not model every component that SGI-575 describes. For example, it does not model the Arm® CoreSight™ technology components.

The FVP models the following IP components:

- 2 × MP4 Cortex®-A75 clusters
- SCP
- MCP
- CMN-600
- Multiple NIC-400 interconnects
- Memory access path towards DRAM

4.2 SGI-575 FVP peripherals

The SGI-575 FVP includes peripherals that the software payload requires to run.

These peripherals are organized in two layers:

SoC

The SoC peripherals represent peripherals that are added to a compute subsystem in a SoC design.

Board

The board peripherals represent peripherals that are present on the board onto which the SoC is mounted.

4.2.1 Memory map for SGI-575 FVP SoC peripherals

This table shows the memory map for the SoC peripherals in the SGI-575 FVP.

Table 4-1: SoC peripherals

Name	Base address	Size	Description
SMC interface	0x00_0800_0000	368MB	Routed to Board
DMA MMU-400	0x00_7FB0_0000	64KB	-

5. Arm® Corstone™ SSE-300 FVP

To develop ahead of hardware availability and to explore the design from a software perspective, the Corstone™ SSE-300 Fixed Virtual Platform (FVP) models much of the Arm® IP in the Corstone™ SSE-300 subsystem version r0p1.

The Corstone™ SSE-300 FVP drives system architecture and software standardization. It is used with the Corstone™ SSE-300 software package which provides software and binaries of proprietary firmware that reduce the amount of work that is required for SoC development. See the Corstone™ SSE-300 software bundle readme for instructions on how to set up and run the FVP.

The FVP models the following IP components:

- A single Arm® Cortex®-M55 processor with the MVE extension.
- A single Arm® Ethos™-U55 or Ethos™-U65 processor.
- Memory Protection Controller (MPC).
- Peripheral Protection Controller (PPC).
- Implementation Defined Attribution Unit (IDAU).

The full description of components that are internal to the SSE-300 subsystem can be found in the [Arm Corstone SSE-300 Example Subsystem Technical Reference Manual](#).

The FVP has the following limitations:

- It does not model every component that Corstone™ SSE-300 describes. For example, it does not model the CoreSight™ technology components.
- QSPI is not modeled. It has QSPI SRAM instead.
- Some components are dummy stubs with a minimal implementation. Models with dummy APB have memory access.
- Some components are partially modeled.

Refer to the following documents for more information:

- [Arm Corstone SSE-300 Example Subsystem Technical Reference Manual](#)
- [Arm MPS3 FPGA Prototyping Board Technical Reference Manual](#)
- [Corstone-300 on Arm Developer](#)

5.1 Memory map overview for Corstone™ SSE-300

This table outlines the main FVP memories and their positions within the memory map.

This memory map includes IDAU security information for memory regions.

Table 5-1: Memory map overview

5.2 Corstone™ SSE-300 FVP peripherals

The Corstone™ SSE-300 FVP includes peripherals that the software payload requires to run.

Board peripherals are peripherals that might be present on the board onto which the SoC is mounted. The Corstone™ SSE-300 board model is based on the Arm® MPS3 board.

Some of the MPS3 Fast Models have minimal implementations. For more information, refer to the documents in the FVP package.

All peripherals that are extensions to the Corstone™ SSE-300 subsystem are mapped into two key areas of the memory map:

0x4000_0000 to 0x47FF_FFFF and 0x4800_0000 to 0x4FFF_FFFF

Non-secure region that maps to AHB Master Expansion 1 interface.

0x5000_0000 to 0x57FF_FFFF and 0x5800_0000 to 0x5FFF_FFFF

Secure region that maps to AHB Master Expansion 1 interface.

¹ Security access is controlled by MPC.

² Accesses to these addresses result in an AHB5 error response.

³ For security settings, control, and features, refer to the Arm® Corstone™ SSE-300 documentation.

5.2.1 Corstone™ SSE-300 non-secure expansion peripherals memory map

Memory map for non-secure board peripherals.

Table 5-2: Non-secure board peripherals

Row ID	Address range in non-secure region		Size	Description	Modeled in FVP

5.4 Corstone™ SSE-300 memory components

The Corstone™ SSE-300 FVP includes the following memory components and their security access is controlled by the MPC.

Table 5-6: Memory components

Name	Non-secure address range	Secure alias	Size
SRAM	0x0100_0000 - 0x010F_FFFF	0x1100_0000 - 0x110F_FFFF	1MB
QSPI SRAM	0x2800_0000 - 0x287F_FFFF	0x3800_0000 - 0x387F_FFFF	8MB
DDR0	0x6000_0000 - 0x6FFF_FFFF	0x7000_0000 - 0x7FFF_FFFF	256MB
DDR1	0x8000_0000 - 0x8FFF_FFFF	0x9000_0000 - 0x9FFF_FFFF	256MB

Name	Non-secure address range	Secure alias	Size
DDR2	0xA000_0000 - 0xAFFF_FFFF	0xB000_0000 - 0xBFFF_FFFF	256MB
DDR3	0xC000_0000 - 0xCFFF_FFFF	0xD000_0000 - 0xDFFF_FFFF	256MB

6. Arm® Corstone™ SSE-310 FVP

To develop ahead of hardware availability and explore the design from a software perspective, the Corstone™ SSE-310 Fixed Virtual Platform (FVP) models much of the Arm® IP in the Corstone™ SSE-310 design. It models version r0p0 of the Corstone™ SSE-310 subsystem.

The FVP drives system architecture and software standardization. It is used with the Corstone™ SSE-310 software package which provides software and binaries of proprietary firmware that reduce the amount of work that is required for SoC development. See the Corstone™ SSE-310 software bundle readme for instructions on how to set up and run the FVP.

The FVP models the following IP components:

- A single Arm® Cortex®-M85 processor with MVE extension.
- A single Arm® Ethos™-U55 processor.
- Memory Protection Controller (MPC).
- Peripheral Protection Controller (PPC).
- Implementation Defined Attribution Unit (IDAU).

The full description of components that are internal to the SSE-310 subsystem can be found in the SSE-310 Example Subsystem TRM.

The FVP has the following limitations:

- It does not model every component that Corstone™ SSE-310 describes. For example, it does not model the CoreSight™ technology components.
- QSPI is not modeled. It has QSPI SRAM instead.
- It has a single DMA-350 engine instead of four PL081 DMA peripherals.
- Some components are dummy stubs with a minimal implementation. Models with dummy APB have memory access.
- Some components are partially modeled.

Refer to the following documents for more information:

- [Arm Corstone SSE-310 Example Subsystem Technical Reference Manual](#)
- [Arm MPS3 FPGA Prototyping Board Technical Reference Manual](#)
- [Corstone-310 on Arm Developer](#)

6.1 Corstone™ SSE-310 FVP memory map overview

This table outlines the main FVP memories and their positions within the memory map.

This memory map includes IDAU security information for memory regions:

Table 6-1: Memory map overview

Row ID	Address range		Size	Description	Alias with Row ID	IDAU region values

6.2 Corstone™ SSE-310 FVP peripherals

The Corstone™ SSE-310 FVP includes peripherals that the software payload requires to run.

These peripherals are organized in the following layers:

Subsystem

The subsystem peripherals represent peripherals that are present on the SoC.

Board

The board peripherals represent peripherals that may be present on the board onto which the SoC is mounted. The Corstone™ SSE-310 board model is based on the Arm® MPS3 board.

All peripherals that are extensions to the Corstone™ SSE-310 subsystem are mapped into two key areas of the memory map:

0x4000_0000 to 0x47FF_FFFF and 0x4800_0000 to 0x4FFF_FFFF

Non-Secure region that maps to the AHB Master Expansion 1 interface.

0x5000_0000 to 0x57FF_FFFF and 0x5800_0000 to 0x5FFF_FFFF

Secure region that maps to the AHB Master Expansion 1 interface.

Some of the MPS3 Fast Models have minimal implementations. For more information, refer to the documents in the FVP package.

⁴ Security access is controlled by MPC.

⁵ Accesses to these addresses result in an AHB5 error response.

⁶ For security settings, control, and features, refer to the Arm® Corstone™ SSE-310 documentation.

6.2.1 Corstone™ SSE-310 FVP subsystem peripherals non-secure memory map

Non-secure memory map for subsystem peripherals.

Table 6-2: Non-secure subsystem peripherals

Row ID	Address range in non-secure region		Size	Description	Modeled in FVP
	From	To

6.2.5 Corstone SSE-310 FVP expansion peripheral interrupt map

Interrupt map at the board layer.

Table 6-6: Interrupt map at the board layer

Interrupt input	Interrupt source
IRQ [32]	System timestamp counter interrupt. Not implemented.
IRQ [33]	UART 0 receive interrupt.
IRQ [34]	UART 0 transmit interrupt.

Interrupt input	Interrupt source
IRQ [35]	UART 1 receive interrupt.
IRQ [36]	UART 1 transmit interrupt.
IRQ [37]	UART 2 receive interrupt.
IRQ [38]	UART 2 transmit interrupt.
IRQ [39]	UART 3 receive interrupt.
IRQ [40]	UART 3 transmit interrupt.
IRQ [41]	UART 4 receive interrupt.
IRQ [42]	UART 4 transmit interrupt.
IRQ [43]	UART 0 combined interrupt.
IRQ [44]	UART 1 combined interrupt.
IRQ [45]	UART 2 combined interrupt.
IRQ [46]	UART 3 combined interrupt.
IRQ [47]	UART 4 combined interrupt.
IRQ [48]	UART overflow (0, 1, 2, 3, 4, and 5).
IRQ [49]	Ethernet.
IRQ [50]	Audio I2S.
IRQ [51]	Touch screen.
IRQ [52]	USB.
IRQ [53]	SPI ADC.
IRQ [54]	SPI (shield 0).
IRQ [55]	SPI (shield 1).
IRQ [56]	Reserved.
IRQ [57]	DMA channel 0 interrupt.
IRQ [58]	DMA channel 1 interrupt.
IRQ [68:59]	Reserved.
IRQ [69]	GPIO 0 combined interrupt.
IRQ [70]	GPIO 1 combined interrupt.
IRQ [71]	GPIO 2 combined interrupt.
IRQ [72]	GPIO 3 combined interrupt.
IRQ [88:73]	GPIO 0 individual interrupts.
IRQ [104:89]	GPIO 1 individual interrupts.
IRQ [120:105]	GPIO 2 individual interrupts.
IRQ [124:121]	GPIO 3 individual interrupts.
IRQ [125]	UART 5 receive interrupt.
IRQ [126]	UART 5 transmit interrupt.
IRQ [127]	UART 5 combined interrupt.
IRQ [130:128]	Reserved.

6.3 Corstone™ SSE-310 FVP peripheral protection controller expansion map

The Corstone™ SSE-310 FVP implements secure access configuration registers which control security and privileged accesses to peripherals connected to PPC.

Table 6-7: Secure access configuration registers - PPC bits

Bit	MAIN_PPCEXP0 (AHB0)	MAIN_PPCEXP1 (AHB1)	PERIPH_PPCEXP0 (APB0)	PERIPH_PPCEXP1 (APB1)	PERIPH_PPCEXP2 (APB2)
0	GPIO-0	-	Timing adapter APB 0	SBCon I2C (touch screen)	FPGA - SCC registers
1	GPIO-1	-	Timing adapter APB 1	SBCon I2C (audio conf)	FPGA - I2S (audio)
2	GPIO-2	-	Timing adapter APB 2	FPGA PL022 (SPI2 for ADC)	FPGA - GPIO (System Ctrl + I/O)
3	GPIO-3	-	-	FPGA PL022 (SPI Shield0)	UART0
4	User AHB 0	-	-	FPGA PL022 (SPI Shield1)	UART1
5	User AHB 1	-	-	FPGA SBCon (I2C - Shield0)	UART2
6	User AHB 2	-	-	FPGA SBCon (I2C - Shield1)	UART3 STUB
7	User AHB 3	-	-	Reserved	UART4 STUB
8	USB and ethernet	-	-	FPGA - SBCon I2C (DDR4 EPROM)	UART5
9	-	-	-	-	Reserved
10	-	-	-	-	CLCD config reg
11	-	-	-	-	RTC
12	-	-	-	-	-
13	-	-	-	-	-
14	-	-	-	-	-
15	-	-	-	-	-
PPC IRQ no.	5	6	2	3	4

6.4 Corstone™ SSE-310 FVP memory components

The Corstone™ SSE-310 FVP includes the following memory components and their security access is controlled by the MPC.

Table 6-8: Memory components

Name	Non-secure address range	Secure alias	Size
SRAM	0x0100_0000 - 0x011F_FFFF	0x1100_0000 - 0x111F_FFFF	2MB
QSPI SRAM	0x2800_0000 - 0x287F_FFFF	0x3800_0000 - 0x387F_FFFF	8MB

Table 6-9: DDR regions

Name	Address range	IDAU region security	Size
DDR0	0x6000_0000 - 0x6FFF_FFFF	NS	256MB
DDR1	0x7000_0000 - 0x7FFF_FFFF	S	256MB
DDR2	0x8000_0000 - 0x8FFF_FFFF	NS	256MB
DDR3	0x9000_0000 - 0x9FFF_FFFF	S	256MB
DDR4	0xA000_0000 - 0xAFFF_FFFF	NS	256MB
DDR5	0xB000_0000 - 0xBFFF_FFFF	S	256MB
DDR6	0xC000_0000 - 0xCFFF_FFFF	NS	256MB
DDR7	0xD000_0000 - 0xDFFF_FFFF	S	256MB

7. Arm® Corstone™-1000 FVP

This is an example FVP system as specified by the Corstone™-1000 architecture and system specifications.

Refer to the [Arm Corstone-1000 Technical Overview](#) for more information.

Note

You must have installed the MMEncrypt add-on package to use this FVP. It can be downloaded from [Product Download Hub](#).

7.1 Corstone™-1000 FVP modeled components

The following components are present in the Corstone™-1000 FVP.

- Host controller:
 - [Cortex-A35 64-bit 4x Cluster CPU](#)
 - [GIC400](#)
 - [Firewall](#)
- MPS3 board:
 - [SMSC 91C111 ethernet controller](#)
 - [PrimeCell RTC \(PL031\) module](#)
 - Audio I2S and SBCon I2C as dummy stub modules
 - [Two SD cards](#)
 - [DRAM 2GB](#)
 - [SRAM 32MB](#)
 - [PL050 KMI](#)
 - [PS2 keyboard](#)
 - [SP805 watchdog](#)
- Secure enclave:
 - [M0+ CPU](#)
 - [CryptoCell312](#)
 - SE Flash (64KB up to 8MB)
 - NVM OTP memory for CC312
 - [Firewall](#)

The FVP does not model Arm® CoreSight™ components.

7.2 Run the Corstone™-1000 FVP with the software package

This FVP is intended to be used with the Arm reference design software package.

About this task

The User Guide for the software package can be found at [ARM Corstone1000](#).

Procedure

1. To see a list of available configuration parameters, run the FVP with the `--list-params` option. Many of these parameters help to bring up bare-metal software on the FVP and are not required if the model is run with the Arm® firmware supplied.
2. This example command line launches the model with the Arm software package:

```
./FVP Corstone-1000 \  
-C diagnostics=4 \  
-C se.trustedBootROMloader.fname="bl1.bin" \  
-C se.trustedSRAM_config=6 \  
-C se.BootROM_config="3" \  
-C se.nvm.raw_image="cc312_otp.bin" \  
--data board.flash0=corstone1000-aarch64-image-mps3.wic.nopt@0x68050000 \  
-C board.xnvm_size=64 \  
-C board.smc_91c111.enabled=1 \  
-C board.hostBridge.userNetworking=true \  
-C board.se_flash_size=8192 \  
-C board.msd_mmc.p_mmc_file=mmc1.dat \  
-C board.msd_mmc.card_type="SD" \  
-C board.msd_mmc.p_fast_access=0 \  
-C board.msd_mmc_2.p_mmc_file=mmc2.dat \  
-C board.msd_mmc_2.card_type="SD" \  
-C board.msd_mmc_2.p_fast_access=0 \  
-C board.msd_mmc.p_max_block_count="0xFFFF" \  
-C board.msd_mmc_2.p_max_block_count="0xFFFF" \  
-C board.flashloader0.fname="flash0" \  
-C board.flashloader0.fnameWrite="flash0" \  
-C board.msd_mmc.support_unpadded_images=true
```

7.3 Corstone™-1000 board peripherals memory and interrupt map

The subsystem model is complemented by a range of peripherals. The board peripherals are representative of peripherals present on the board onto which the SoC is mounted.

Table 7-1: Corstone™-1000 board peripherals memory and interrupt map

Component	Base address	Size	IRQ
Ethernet	0x00_4010_0000	1M	116
SCC registers	0x00_4000_0000	4KB	-
IO registers	0x00_4001_0000	4KB	-
SD card 0	0x00_4030_0000	64KB	149
Virtio-Net	0x00_4040_0000	64KB	145
SD card 1	0x00_5000_0000	64KB	147
SE flash	0x00_6001_0000	8MB	-

7.4 Networking on Corstone™-1000 FVP

Steps to bring up the network on the FVP.

Procedure

1. Set up the TAP interface on the host machine. For information, see [TAP/TUN networking](#) in the *Fast Models Reference Guide*.
2. Append the following parameters to the model:
 - `-C board.smsc_91c111.enabled=true`
 - `-C board.hostbridge.interfaceName="<TAP Interface Name>"`

8. Juno FVP3 model

This model implements the Juno Arm®v8 hardware platform, revision r0.

The Juno SoC is described in the [Juno Arm Development Platform TRM](#).

The version number of the model, including the build number, can be obtained by running the model with the `--version` parameter.

For information about the changes in this release, see the Fast Models Portfolio release notes.

To provide feedback on the product, create a ticket at <https://support.developer.arm.com>.

8.1 Unimplemented features and model limitations

Some peripherals are unimplemented in the model, and others are implemented with limitations.

The model does not implement the following peripherals that are described in the Juno SoC ADP TRM:

- CoreSight™ and device discovery ROMs.
- CoreSight™ devices. The memory area is mapped as a dummy APB region.
- SoC Master signals.
- DFI phy config. It is mapped as a dummy APB region.
- PVT sensors are mapped as DummyAPB peripherals.
- PCIe and the associated SMMU, and the associated MSI mechanism.
- USB and the associated SMMU.
- I2C controllers and their associated peripherals.

The following peripherals are implemented but with limitations:

- The Mali™-T624 GPU is present in a form that permits a driver to load and make forward progress, but it does not render any output to the target surface or buffer.
- 2 x HDLCD controllers are present but the downstream physical ports and logic that would normally be part of selecting a suitable display format are not modeled. An additional Linux driver is available instead.

8.2 Running the Juno FVP3 model

The model can be run through the Arm DS debug IDE or standalone.

When running the model on a Linux host machine, ensure that it has at least 16GB of RAM, in addition to the normal Fast Models requirements. The Juno platform and model incorporate 8GB of DRAM.

8.2.1 Run the Juno FVP3 model in Arm DS

Arm DS can auto-detect and connect to the Juno FVP and offers access to the big.LITTLE™ cores individually or collectively. It is also possible to connect to the Cortex®-M3 core in the SCP.

Start the model with the `--iris-server` option, or the older `--cadi-server` option, then use **New > Model connection** to begin the process of auto-detection.

8.2.2 Run the Juno FVP3 model standalone

The Juno FVP can boot standard software stacks, for example Linux, with minimal modification.

Example command line:

```
$BUILD/Platforms/LISA/CSS/Build_Juno_FVP3/Linux64-Release-GCC-7.3/isis_system \
--plugin $BUILD/PVLIB_HOME/plugins/Linux64_GCC-7.3/Crypto.so \
-C css.aon.scp.ROMloader.fname=juno-scp-rom.bin \
-C board.flashloader0.fname=juno-nor-image.bin \
-C board.base_clk_frequency=0x17D7840 \
-C soc.pl011_uart0.unbuffered_output=1 \
-C soc.pl011_uart1.unbuffered_output=1 \
-C board.pl011_uart1.unbuffered_output=1 \
-C soc.scc.gpr0=0x03000000 \
-C soc.scc.apps_alt_boot=0xBEC0000 \
-C soc.scc.scp_alt_boot=0xABE40000 \
-C board.mmc.p_mmc_file=optional-mmc-card.img \
-C board.virtio_blockdevice.image_path=optional-virtio-disk.img \
-C board.smc_91c111.enabled=1 \
-C board.hostbridge.userNetworking=<0|1> \
-C board.hostbridge.interfaceName=<tap>
```

- `juno-scp-rom.bin` is included with the model in this release.
- `juno-nor-image.bin` represents the contents of the NOR flash memory.

In hardware, there is a complex mechanism to present the NOR flash as a USB disk to allow replacement firmware, for example arm-trusted-firmware, boot loader, or Linux kernel, to be pushed to the board. Instead of modeling this, a script, `images/create_afs_image.py` is included to create the same memory image directly from the firmware components. Any optional MMC image should be less than 2GB.

See [User mode networking](#) for more information about networking in Fast Models.

8.2.3 Run the create_afs_image.py script

This topic shows an example command line that boots Linux using U-Boot.

```
python3 create_afs_image.py juno-nor-image.bin \
${FW_SW_DIR}/fip-uboot.bin,-,0 \
${KERNEL_OUT_DIR}/arch/arm64/boot/Image,Image \
${KERNEL_OUT_DIR}/arch/arm64/boot/dts/arm/juno-fvp.dtb,board.dtb \
${FW_SW_DIR}/scp_b11.bin,-,0x3e40000 \
${FW_SW_DIR}/b11.bin,-,0x3ec0000 \
uboot-script.img,BOOTSCR \
./u-boot-saveenv.bin,-,0x3fc0000
```

The entry for each component of the NOR image consists of:

- The file on the host machine to add to the image.
- An optional alternative name to use for that file when the NOR metadata is generated. Use a '-' to not have an entry in the metadata at all, or leave blank to use the leaf name of the host file.
- An optional address at which to position the file in the NOR image. Those components shown with an address must use that address to place code and data at expected locations. Other components can be referenced by name so their address does not need to be fixed. Components with no fixed address are allocated sequentially after the previous component. There is no intelligent allocation of components to make best use of the available space. A warning occurs if the image exceeds the size of the NOR area.

In this command line:

- `FW_SW_DIR` points to the `SOFTWARE` directory of a standard Juno firmware bundle, for example those from <http://releases.linaro.org/members/arm/platforms/20.01/> and `KERNEL_OUT_DIR` is the build output of a Linux kernel.
- `juno-fvp.dtb` is a modified version of the normal `juno.dts` that removes the unsupported hardware, for example PCIe, USB, and I2C audio, and adds some additional sections, for example the virtio disk and a helper mechanism for the HDLCD output.

`juno-fvp.dts` is included alongside the model in this release and should be used to patch a standard Linux kernel to create the DTB.

- `BOOTSCR/uboot-script.img` allows you to make permanent changes to the boot sequence programmatically. One required change is typically to tell the kernel to boot from the virtio device `/dev/vda` instead of a regular disk at `/dev/sda`. With bigger kernels, it is also necessary to move the device tree up in memory, for example:

```
echo "setenv fdt_addr 83000000" > uboot_script.txt
echo "setenv bootargs \$bootargs root=/dev/vda" >> uboot_script.txt
mkimage -T script -C none -n 'BOOTSCR' -d uboot-script.txt uboot_script.img
```

If your disk image has no partition table, then `root=/dev/vda` is correct.

If your disk image has a partition table then you need something like `root=/dev/vda2` to point at the correct partition to find the root fs. You can check this with:

```
fdisk -l optional-virtio-disk.img
```

- `u-boot-saveenv.bin` is an optional example of an alternative way to modify U-Boot settings by replacing the region of flash containing the saved U-Boot environment. This is not supplied, but can be created by using the U-Boot commands to modify the environment and save it to another part of memory to be dumped to disk.

8.3 Jump-start the application clusters on bare metal

It is possible to bring the application clusters out of reset without running firmware on the SCP. This is supported using parameters that allow the user to override the default configuration for the SCP control over Cortex®-A53 and Cortex®-A57 cluster reset.

Add the following lines as appropriate to the Juno configuration file:

```
-C css.aon.scp.scp_sc.a53_power_on=15  
-C css.aon.scp.scp_sc.a57_power_on=3
```

The parameter is a bitfield describing which of the CPUs to turn on.

If you are using a separate parameter file, the `-c` is not required. Specify each parameter on a new line in the file.

To supply an image at the same time, add the following:

```
-a css.cluster0.*=<your-image>
```

You can also target `cluster1`, and optionally any supported `cpu` in a cluster, for example `css.cluster0.cpu0`. Because the two clusters and the CPUs within a cluster share a memory interface, this rarely makes a difference.

8.4 Basic setup for the TZC-400 model on bare metal

The default state out of reset for the TZC-400 is to block all accesses to DRAM.

You can configure the TZC-400 through the programmer's view or by using command-line parameters. For many applications, you can ignore TrustZone® security for DRAM. In this case,

you must enable read/write access to DRAM from Secure and Non-Secure world in the application clusters. This can be achieved with the following parameters:

```
-C css.tzc400.rst_gate_keeper=0x0f  
-C css.tzc400.rst_region_attributes_0=0xc000000f  
-C css.tzc400.rst_region_id_access_0=0xffffffff
```

9. Arm® Neoverse™ N1 edge and Neoverse™ E1 edge reference design FVPs

This chapter describes the Arm® Neoverse™ N1 edge and Arm® Neoverse™ E1 edge reference design FVPs. These FVPs are collectively referred to as RD-N1-E1-edge FVPs.

A reference design is a collection of resources, including documentation, a software stack, and FVPs, that describe and model the design choices and performance for recommended configurations of a typical Arm®-based subsystem.

The RD-N1-E1-edge FVPs drive system architecture and software standardization. They provide software and binaries of proprietary firmware that reduce the amount of work that is required for SoC development.

Arm is working to make more content available for these FVPs. To find out more about reference designs, or to contact Arm about them, see [Neoverse Reference Design](#).

9.1 About the RD-N1-E1 FVPs

The RD-N1-E1-edge FVPs model many of the Arm® IP components in the RD-N1-E1-edge design.

The RD-N1-E1-edge FVPs model the following RD-N1-E1-edge configurations:

Config1

N1 2xMP4, 512KB L2 cache per core, 4x2 mesh, 2xDMC.

Config2

E1 2xMP8, 256KB L2 cache per core, 4x2 mesh, 2xDMC.

Config3

Dual-chip. Two Config1 subsystems linked by CMN-600 CML.

The diagrams in [9.2 Block diagrams for RD-N1-E1-edge](#) on page 73 show the IP components that RD-N1-E1-edge describes. Not all of these components are modeled by these FVPs. The following components are modeled:

- N1 2xMP4 or E1 2xMP8 cores.
- System Control Processor (SCP).
- Management Control Processor (MCP).
- CMN-600.

- Multiple NIC-450 interconnects, although NIC-450 is replaced with a simple bus model.
- Memory access path towards DRAM, including DMC-620 memory controllers.

The following components are not modeled:

- CoreSight™ SoC.
- ELA-500.
- USB.

9.2 Block diagrams for RD-N1-E1-edge

The following diagrams show the composition of RD-N1-E1-edge systems.

Figure 9-1: Block diagram for Neoverse N1 edge reference design

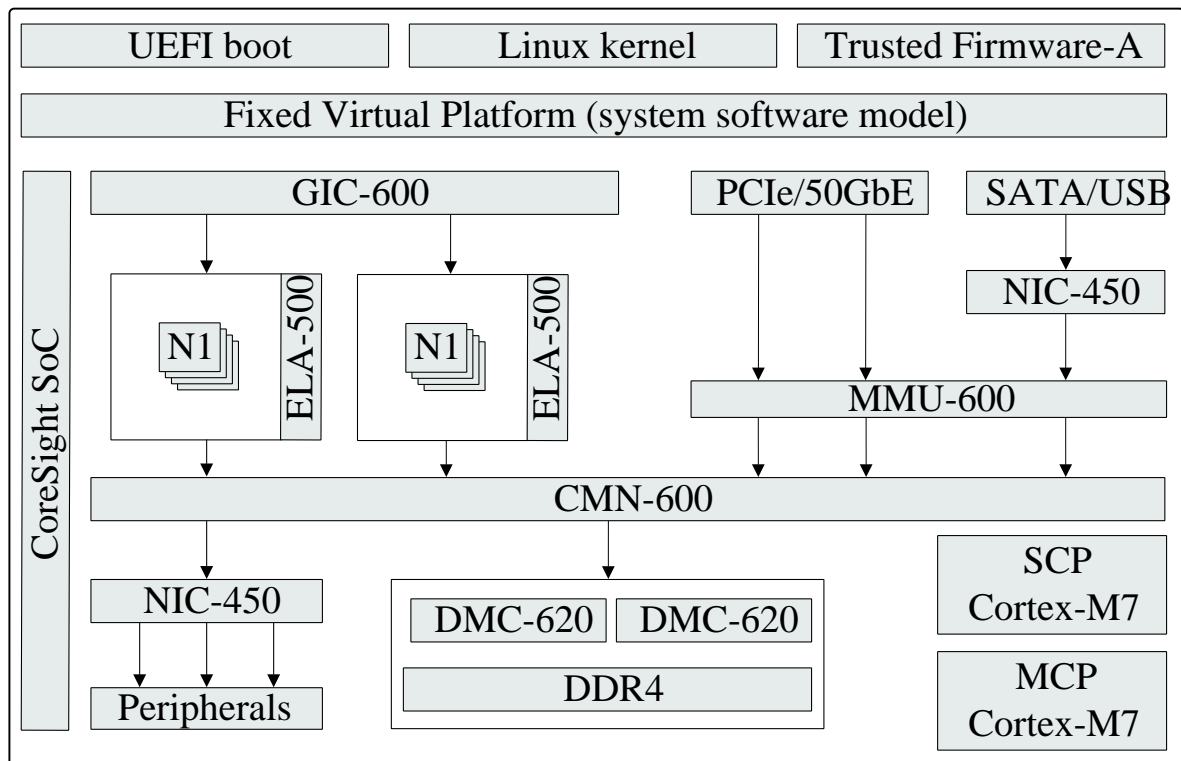

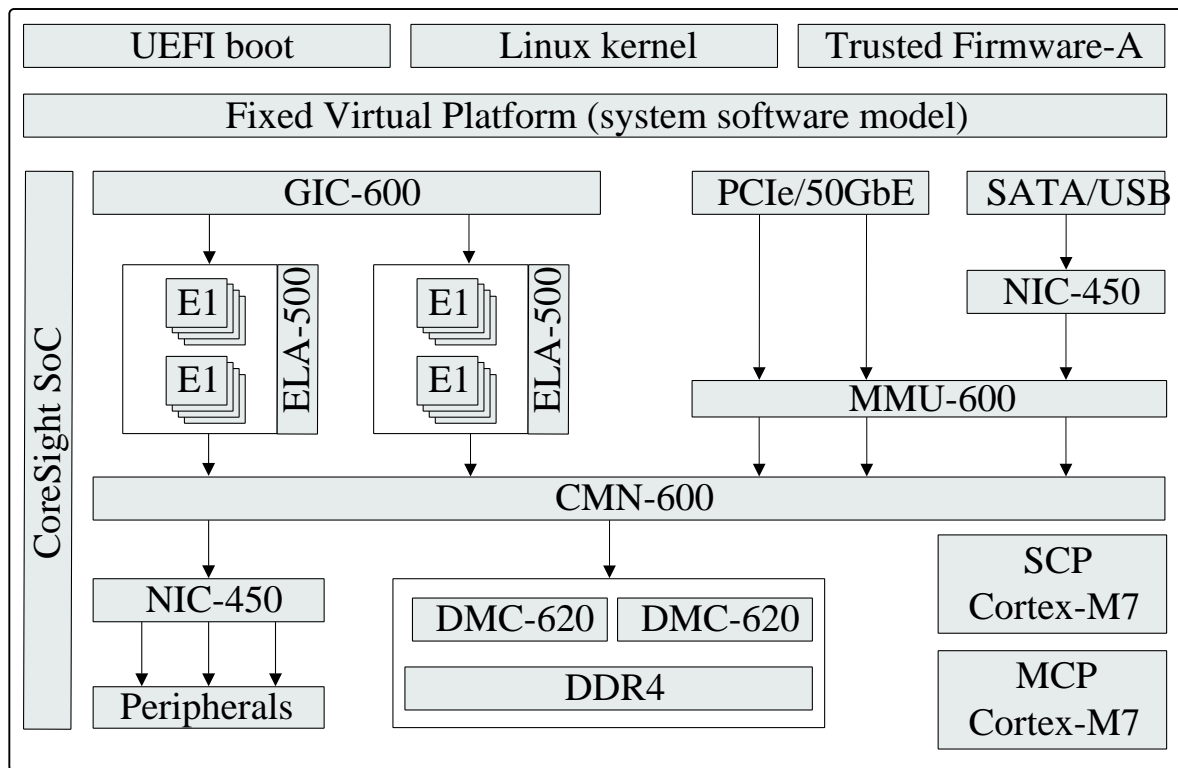

Figure 9-2: Block diagram for Neoverse E1 edge reference design

9.3 RD-N1-E1 FVP peripherals

The RD-N1-E1-edge FVPs include peripherals that the software payload requires to run.

These peripherals are organized in two layers:

SoC

The SoC peripherals represent peripherals that may be added to a compute subsystem in a SoC design.

Board

The board peripherals represent peripherals that may be present on the board onto which the SoC is mounted.

The RD-N1-E1-edge SoC model and board model are based on the Juno Arm® Development Platform (ADP).

In Config3, each compute subsystem has its own SoC and board layers. In this two-chip configuration, each chip is assigned the following memory regions:

Chip 0

0x000_0000_0000-0x3FF_FFFF_FFFF

Chip 1

0x400_0000_0000-0x7FF_FFFF_FFFF

A sideband communication channel is required to coordinate multi-chiplet software boot over CMN-600. The FVP implements this using the MHU device, but Arm recommends using a solution such as I2C in hardware.

9.3.1 Memory map for RD-N1-E1-edge FVP SoC peripherals

This table shows the memory map for the SoC peripherals in the RD-N1-E1-edge FVPs.

The SoC peripherals area in the RD_N1_E1_edge memory map is mapped to an Expansion AXI region. Therefore, these mappings are not defined in the reference design.

Table 9-1: SoC peripherals memory map

Name	Base address	Size	Description
SMC interface	0x00_0800_0000	368MB	Routed to board

10. Arm® Neoverse™ N2 reference design FVP

The Arm® Neoverse™ N2 reference design (RD-N2) Fixed Virtual Platform (FVP) models much of the Arm® IP in RD-N2. The FVP enables partners to develop ahead of hardware availability and to explore the design from a software perspective.

The FVP is used with the RD-N2 software package. For instructions on setting up and running the FVP, see the RD-N2 Software Bundle Readme.

10.1 About the RD-N2 FVP

The RD-N2 FVP models CFG32C4M, which is a single-chiplet system with the number of Arm® Neoverse™ N2 cores reduced to 16.

The FVP models the following IP components:

- Arm® Neoverse™ N2 MP1 cores.
- CMN-700.

The CMN-700 model supports RAS, which when enabled can impact system performance. To avoid this, the model disables RAS by default. To enable it, set the CMN700 model parameter `enable_ras` to true.

-
- Multiple NIC-450 interconnects.
 - GIC-700.
 - MMU-700.
 - Arm® Cortex®-M7 SCP and MCP cores.

The FVP does not model every component that RD-N2 describes. For example, the FVP does not model the CoreSight™ technology components.

The RD-N2 FVP drives system architecture and software standardization. The models provide software and binaries of proprietary firmware that reduce the amount of work that is required for SoC development.

10.2 RD-N2 FVP peripherals

The RD-N2 FVP includes peripherals that the software payload requires to run.

The SoC peripherals area and board peripherals area in the RD-N2 memory map are mapped to an expansion AMBA® AXI region. Therefore, these mappings are not defined in the reference design.

The peripherals are organized into two layers:

SoC

The SoC peripherals represent peripherals that might be added to a compute subsystem in an SoC design. The RD-N2 SoC model is based on the Juno Arm® Development Platform (ADP).

Board

The board peripherals represent peripherals that might be present on the board onto which the SoC is mounted. The RD-N2 board model is based on the Juno ADP.

10.2.1 Memory map for RD-N2 FVP SoC peripherals

This table shows the memory map for the SoC peripherals in the RD-N2 FVP.

Table 10-1: RD-N2 FVP SoC peripherals

Name	Base address	Size	Description
SMC0 interface	0x00_0800_0000	64MB	Routed to the board.
SMC1 interface	0x10_5000_0000	256MB	Routed to the board.
PCIe config	0x10_1000_0000	256MB	-
PCIe memory	0x00_6000_0000	512MB	-
DMA MMU-500	0x00_E00_0000	64KB	-
HDLCD1 MMU-500	0x00_E01_0000	64KB	-
HDLCD0 MMU-500	0x00_E02_0000	64KB	-

11. Arm® Neoverse™ V1 reference design FVP

To develop ahead of hardware availability and to explore the design from a software perspective, the Fixed Virtual Platform (FVP) models many of the Arm® IP in the RD-V1 design.

11.1 About the RD-V1 FVP

Two configurations of RD-V1 are supported.

- RD-V1 FVP models Config-M, a single-chiplet system with 16 Arm® Neoverse™ V1 cores.
- RD-V1 quad-chiplet FVP models a reduced-size variant of Config-XL, consisting of four compute subsystems linked by CMN-650 CML. It provides a functional model of a quad-chiplet system. Each subsystem contains four Arm® Neoverse™ V1 cores, for a total of 16 cores in the FVP (at full size, Config-XL has 4 x 32 cores).

The FVP models the following IP components:

- Arm® Neoverse™ V1 MP1.
- GIC-700.
- MMU-600.
- SCP.
- MCP.
- CMN-650.
- Multiple NIC-450 interconnects.
- Memory access path towards DRAM which includes a TrustZone® controller.

The FVP does not model every component that RD-V1 describes. For example, it does not model the CoreSight™ technology components.

The RD-V1 FVP drives system architecture and software standardization. The models provide software and binaries of proprietary firmware that reduce the amount of work that is required for SoC development.

11.2 RD-V1 FVP peripherals

The RD-V1 FVP includes peripherals that the software payload requires to run.

These peripherals are organized in two layers:

SoC

The SoC peripherals represent peripherals that can be added to a compute subsystem in a SoC design. The Arm® Neoverse™ V1 reference design SoC model is based on the Juno Arm Development Platform (ADP).

Board

The board peripherals represent peripherals that can be present on the board onto which the SoC is mounted. The RD-V1 board model is based on the Juno Arm Development Platform (ADP).

In the quad-chiplet system, each compute subsystem has SoC and Board layers dedicated to that subsystem. Addressing for each chip is defined in chapter 7.1, AP memory map, in the Arm® Neoverse™ V1 reference design Software Developer Guide.

Chip 0	0x000_0000_0000-0x3FF_FFFF_FFFF
Chip 1	0x400_0000_0000-0x7FF_FFFF_FFFF
Chip 2	0x800_0000_0000-0xBFF_FFFF_FFFF
Chip 3	0xC00_0000_0000-0xFFF_FFFF_FFFF

A sideband communication channel is required to coordinate multi-chiplet software boot over CMN-650. The FVP implements this using the MHU device, but Arm recommends using a solution such as I²C in hardware.

11.2.2 Memory map for RD-V1 FVP board peripherals

This table shows the memory map for the board peripherals in the RD-V1 FVP.

The SoC peripherals area and board peripherals area in the RD-V1 memory map are mapped to an Expansion AXI region. Therefore, these mappings are not defined in the reference design.

Table 11-2: Board peripherals

Name	Base address	Size	Description
NOR Flash 0	0x00_0800_0000	64MB	-
NOR Flash 1	0x00_0C00_0000	64MB	-
NOR Flash 2	0x00_1000_0000	64MB	-
Ethernet	0x00_1800_0000	64MB	SMSC 91C111
System registers	0x00_1C01_0000	64KB	-
MCI	0x00_1C05_0000	64KB	PL180
KMI 0	0x00_1C06_0000	64KB	PL050
KMI 1	0x00_1C07_0000	64KB	PL050
UART 0	0x00_1C09_0000	64KB	PL011
UART 1	0x00_1C0A_0000	64KB	PL011
Watchdog	0x00_1C0F_0000	64KB	SP805
Dual Timer	0x00_1C11_0000	64KB	SP804

GPIO 0	0x00_1C1D_0000	64KB	PL061_GPIO
GPIO 1	0x00_1C1E_0000	64KB	PL061_GPIO
DRAM	0x00_8000_0000	2GB	-
DRAM	0x80_8000_0000	6GB	-

11.2.3 Interrupt maps for RD-V1 FVP

These tables show the interrupt IDs and sources for the FVP peripherals.

Table 11-3: Interrupt map at the SoC layer

Interrupt ID	Source	Description
147	UART 0	-
148	UART 1	-
171	TRNG	-

Table 11-4: Interrupt map at the board layer

Interrupt ID	Source	Description
111	Ethernet	-
132	RTC	-
133	UART 0	-
134	UART 1	-
140	VFS2	-
202	Virtio	-

Interrupt ID	Source	Description
204	Virtio net device	-
228	Watchdog	-
229	KMI 0	-
230	Dual Timer	Interrupts 0 and 1
231	System registers Ethernet IRQ	-

12. Configurable PCIe hierarchy

Configurable PCIe hierarchy allows you to create a customized PCIe hierarchy based on a JSON-formatted file.

To use it, add the following parameter to the command line before running the model, specifying the path to the PCIe hierarchy file:

```
-C pci.hierarchy_file_name=/path/to/hierarchy.json
```

PCIe hierarchy files are supported by most Infrastructure Reference Design FVPs. To find out if your platform supports it, run it with the `--list-params` option to see if it has the `*.hierarchy_file_name` parameter.

12.1 JSON format for the hierarchy

To represent an endpoint device, a root port, or a switch, use the following JSON format.

An endpoint device is represented in the following format:

```
{
  "<device_type>/<device_name>": {
    "parameter1":<parameter_value>
    "parameter2":<parameter_value>
    "  ...  " :<  ...  >
  }
}
```

A root port is represented in the following format, where a `__downstream__` parameter denotes a device connected downstream of the port:

```
{
  "rootport/<rootport_name>": {
    "parameter1":<parameter value>
    "parameter2":<parameter value>
    "  ...  " :<  ...  >
    "__downstream__":{
      "<device_type>/<device_name>":{
        "parameter3":<parameter value>
        "parameter4":<parameter value>
        "  ...  " :<  ...  >
      }
    }
  }
}
```

A switch is represented in the following format, where a `__downstream__<device_number>` parameter denotes the device connected downstream of the switch, with the downstream port at device number `<device_number>` on the switch's internal bus:

```
{
  "switch/<switch_name>": {
    "parameter1":<parameter value>
    "parameter2":<parameter value>
    " ... ":< ... >
    "__downstream__<device_number1>": {
      "<device_type>/<device_name>":{
        "parameter3":<parameter value>
        "parameter4":<parameter value>
        " ... ":< ... >
      }
    },
    "__downstream__<device_number2>":{
      "<device_type>/<device_name>":{
        "parameter5":<parameter value>
        "parameter6":<parameter value>
        " ... ":< ... >
      }
    }
  }
}
```

12.2 Common PCIe endpoint parameters

A PCIe endpoint is the common PCIe frontend for all endpoint-type devices in the hierarchy, namely AHCI controller, host bridge, and SMMU test engine, which are described later in this chapter.

The following table describes the parameters for PCIe-related features of endpoints:

Table 12-1: Common endpoint parameters

Parameter	Description	Type	Range
device	Device number of the endpoint.	int	0-31
function	Function number for the endpoint.	int	0-7
vendor_id	PCI vendor ID.	int	0-0xFFFFE
device_id	PCI device ID.	int	0-0xFFFFE
base_class	PCI base class.	int	0-255
sub_class	PCI sub class.	int	0-255
bar0_64bit	If BAR 0 is 64 bits wide, if region size is nonzero.	bool	-
bar1_64bit	If BAR 1 is 64 bits wide, if region size is nonzero.	bool	-
bar2_64bit	If BAR 2 is 64 bits wide, if region size is nonzero.	bool	-
bar3_64bit	If BAR 3 is 64 bits wide, if region size is nonzero.	bool	-
bar4_64bit	If BAR 4 is 64 bits wide, if region size is nonzero.	bool	-

Parameter	Description	Type	Range
bar0_log2_size	Log2 of the size of the region pointed to by BAR 0. Zero is reserved which means bar is not used ⁷ .	int	0-63
bar1_log2_size	Log2 of the size of the region pointed to by BAR 1. Zero is reserved which means bar is not used.	int	0-63
bar2_log2_size	Log2 of the size of the region pointed to by BAR 2. Zero is reserved which means bar is not used.	int	0-63
bar3_log2_size	Log2 of the size of the region pointed to by BAR 3. Zero is reserved which means bar is not used.	int	0-63
bar4_log2_size	Log2 of the size of the region pointed to by BAR 4. Zero is reserved which means bar is not used.	int	0-63
bar5_log2_size	Log2 of the size of the region pointed to by BAR 5. Zero is reserved which means bar is not used.	int	0-63
uses_interrupt	Enable support for legacy interrupts.	bool	-
interrupt_pin_index	Interrupt pin used by this function. 1 is INTA, 2 is INTB, 3 is INTC, 4 is INTD.	int	1-4
multi_function	Set to true if this endpoint is part of a multi-function device.	bool	-
pcie_version	PCIe version, bits[3:0] in capabilities register. 1 is PCIe 3.0. 2 is PCIe 4.0.	int	1-15
prog_iface	PCI programming interface.	int	0-15
rev_id	PCI revision ID.	int	0-15
subsys_id	PCI subsystem ID.	int	0-0xFFFFE
subsys_vendor_id	PCI subsystem vendor ID.	int	0-0xFFFFE
express_capability_device_type	PCI Express Capabilities Device Type, bits[7:4] in capabilities register. 0 is PCIe EndPoint, 9 is RCiEP.	int	0-15
msix_support	Enable device support for MSI-X.	bool	-
msix_pba_bar	BAR used by MSI-X pending bit array.	int	0-5
msix_table_bar	BAR used by MSI-X table.	int	0-5
msix_table_size	Size of tables for MSI-X.	int	0-2048
power_mgmt_capability	Device supports power-management capabilities.	bool	-
pasid_supported	If set, then the PCIe device can emit PASID (SubstreamIDs).	bool	-
ext_fmt_field_supported	Enable extended format field support.	bool	-
extended_tag_supported	Extended tag field support.	bool	-
link_port_number	Port number for PCIe link.	int	0-255
pri_supported	If set, then the PCIe function supports Page Request Interface (requires ATS).	bool	-
rber_supported	Enable role-based error reporting.	bool	-
slot_and_root_status_msi_idx	MSI index for reporting slot and root status changes.	int	0-2047
tag_10bit_completer_supported	Enable 10-bit tag completer support.	bool	-
tag_10bit_requester_supported	Enable 10-bit tag requester support.	bool	-
aspm_optionality_compliant	Enable ASPM optionality compliance.	bool	-

⁷ Parameter value is fixed and cannot be overridden.

Parameter	Description	Type	Range
ats_supported	If set, then the PCIe function supports Address Translation Services (ATS).	bool	-

12.3 AHCI controller parameters

The Advanced Host Controller Interface (AHCI), is a technical standard for an interface that enables software to communicate with Serial ATA (SATA) devices.

Default values for endpoint parameters:

- device: 0
- function: 0
- vendor_id: 0xABC*
- device_id: 0xACED*
- base_class: 0x1* (device class for mass storage)
- sub_class: 0x6* (sub class for SATA)
- bar0_64bit: false
- bar1_64bit: false
- bar2_64bit: false
- bar3_64bit: false
- bar4_64bit: false
- bar0_log2_size: 13
- bar1_log2_size: 13
- bar2_log2_size: 12
- bar3_log2_size: 13
- bar4_log2_size: 12
- bar5_log2_size: 13
- uses_interrupt: false*
- interrupt_pin_index: 1
- multi_function: false
- pcie_version: 2
- prog_iface: 0x1*
- rev_id: 0x1*
- subsys_id: 0x2*
- subsys_vendor_id: 0x13B5*

- `express_capability_device_type`: 0
- `msix_support`: true*
- `msix_pba_bar`: 4*
- `msix_table_bar`: 2*
- `msix_table_size`: 1*
- `power_mgmt_capability`: true
- `pasid_supported`: false
- `ext_fmt_field_supported`: true
- `extended_tag_supported`: true
- `link_port_number`: 0
- `pri_supported`: false
- `rber_supported`: true
- `slot_and_root_status_msi_idx`: 0
- `tag_10bit_completer_supported`: true
- `tag_10bit_requester_supported`: true
- `aspm_optionality_compliant`: true
- `ats_supported`: false

Note

* indicates parameter values that are fixed and cannot be overridden.

Table 12-2: AHCI parameters and their default values

Parameter	Description	Default value
<code>force_mode</code>	Force disk to report support for at most PIO/DMA/NCQ mode (only for testing/bring-up purposes). PIO mode is always supported. Use NCQ for maximum performance.	"NCQ"
<code>image_path</code>	Comma-separated list of 0-32 disk images. Each image represents one SATA disk which is connected to one port of the AHCI controller. Empty list elements are allowed and result in a SATA port that has no disk attached. An empty string (default) means one SATA port with no disk attached.	""
<code>run_async</code>	Do host I/O in a background thread asynchronously. Enabling this parameter makes the simulation non-deterministic and may or may not improve performance.	false

Example

```
"ahci/ahci0": {
  "device": 10,
  "function": 0,
  "image_path": "/path/to/image",
  "express_capability_device_type": 9
}
```

12.4 Host bridge parameters

On real systems, the host bridge connects the tree of PCI buses, which are internally connected with PCI-to-PCI bridges, to the rest of the system. On FVPs, it is merely a placeholder representation, and does not provide any functionality.

Default values for endpoint parameters:

- `device`: 0
- `function`: 0
- `vendor_id`: 0x13B5
- `device_id`: 0
- `base_class`: 0x6*
- `sub_class`: 0
- `bar0_64bit`: false
- `bar1_64bit`: false
- `bar2_64bit`: false
- `bar3_64bit`: false
- `bar4_64bit`: false
- `bar0_log2_size`: 12
- `bar1_log2_size`: 0
- `bar2_log2_size`: 0
- `bar3_log2_size`: 0
- `bar4_log2_size`: 0
- `bar5_log2_size`: 0
- `uses_interrupt`: false
- `interrupt_pin_index`: 1
- `multi_function`: false
- `pcie_version`: 2
- `prog_iface`: 0xf
- `rev_id`: 0xf
- `subsys_id`: 0xf
- `subsys_vendor_id`: 0x13B5
- `express_capability_device_type`: 9
- `msix_support`: false
- `msix_pba_bar`: 6

- `msix_table_bar`: 6
- `msix_table_size`: 1
- `power_mgmt_capability`: true
- `pasid_supported`: false
- `ext_fmt_field_supported`: true
- `extended_tag_supported`: true
- `link_port_number`: 0
- `pri_supported`: true
- `rber_supported`: true
- `slot_and_root_status_msi_idx`: 0
- `tag_10bit_completer_supported`: true
- `tag_10bit_requester_supported`: true
- `aspm_optionality_compliant`: true

* indicates parameter values that are fixed and cannot be overridden.

Example

```
"hostbridge/hb": {
    "device": 0,
    "function": 0,
}
```

12.5 SMMU test engine parameters

SMMUV3TestEngine is a PCIe device used to generate various stimuli that can help test SMMU integration in the system.

Default values for endpoint parameters:

- `device`: 0
- `function`: 0
- `vendor_id`: 0x13B5*
- `device_id`: 0xFF80
- `base_class`: 0xFF*
- `sub_class`: 0
- `bar0_64bit`: true

- bar1_64bit: false
- bar2_64bit: true
- bar3_64bit: false
- bar4_64bit: true
- bar0_log2_size: 18
- bar1_log2_size: 0
- bar2_log2_size: 15*
- bar3_log2_size: 0
- bar4_log2_size: 12*
- bar5_log2_size: 0
- uses_interrupt: false
- multi_function: false
- pcie_version: 2
- prog_iface: 0x0
- rev_id: 0xf
- subsys_id: 0x0
- subsys_vendor_id: 0x13B5*
- express_capability_device_type: 9
- msix_support: true
- msix_pba_bar: 4
- msix_table_bar: 2
- msix_table_size: 2048
- power_mgmt_capability: true
- pasid_supported: false
- ext_fmt_field_supported: true
- extended_tag_supported: true
- link_port_number: 0
- pri_supported: true
- rber_supported: true
- slot_and_root_status_msi_idx: 0
- tag_10bit_completer_supported: true
- tag_10bit_requester_supported: true
- aspm_optionality_compliant: true

* indicates parameter values that are fixed and cannot be overridden.

Example

```
"smmu3testengine/smmute": {
  "device": 0,
  "function": 0,
}
```

12.6 Root port parameters

The following root port parameters are available.

Table 12-3: Root port parameters

Parameter	Description	Type	Range	Default value
device_number	Device number on this bus.	int	0-31	0
device_id	PCI device ID.	int	0-0xFFFFE	0xdef
vendor_id	PCI vendor ID.	int	0-0xFFFFE	0x13B5
acs_supported	Access control services supported.	bool	-	false
aspm_optionality_compliant	Enable ASPM optionality compliance.	bool	-	true
ext_fmt_field_supported	Enable extended format field support.	bool	-	true
extended_tag_supported	Extended tag field support.	bool	-	true
link_port_number	Port number for PCIe link.	int	0-255	0
pcie_version	PCIe version, bits[3:0] in capabilities register. 1 is PCIe 3.0. 2 is PCIe 4.0.	int	1-15	2
rber_supported	Enable role-based error reporting.	bool	-	true
slot_and_root_status_msi_idx	MSI index for reporting slot and root status changes.	int	0-2047	0
tag_10bit_completer_supported	Enable 10-bit tag completer support.	bool	-	true
tag_10bit_requester_supported	Enable 10-bit tag requester support.	bool	-	true

Example

```
"rootport/rootport0": {
  "device_number": 5,
  "downstream": {
    "ahci/ahci1": {
      "device": 0,
      "function": 0,
      "image_path": "/path/to/image"
    }
  }
}
```

}

12.7 Switch parameters

This topic lists the switch parameters with their default values and gives an example.

Table 12-4: Switch parameters

Parameter	Description	Type	Range	Default value
device_number	Device number on this bus.	int	0-31	0
acs_supported	Access control services supported.	bool	-	false

Example

```
"switch/switch0": {
    "device_number": 0,
    "—_downstream_10": {
        "ahci/ahci4": {...}
    },
    "—_downstream_20": {
        "ahci/ahci2": {...}
    }
}
```

12.8 Root bridge parameters

The term *root bridge* is taken from the PCI Firmware Specification Revision 3.x. It refers to an abstraction for the platform's PCI config and memory I/O access mechanism. A root bridge can be used to create multiple ECAM and MMIO regions within the system's ECAM and MMIO limits.

Table 12-5: Root bridge parameters

Parameter	Description	Type	Range
ecam_start	ECAM base address.	int	Min: <System ECAM base> Max:<System ECAM end - 1MB>
ecam_end_incl	ECAM end address.	int	Min:<System ECAM base + 1MB> Max:<System ECAM end>
mem32_start	32-bit memory window base address.	int	Min:<System MEM32 base> Max:<System MEM32 end>
mem32_end_incl	32-bit memory window end address.	int	Min:<System MEM32 base> Max:<System MEM32 end>
mem64_start	64-bit memory window base address.	int	Min:<System MEM64 base> Max:<System MEM64 end>

Parameter	Description	Type	Range
mem64_end_incl	64-bit memory window base address.	int	Min:<System MEM64 base> Max:<System MEM64 end>
ecam_start_bus_number	ECAM start bus number.	int	Min:<System start bus> Max:<System end bus> Note: Each bus consumes 1MB of memory, so each ECAM should have enough space (ecam_start - ecam_end_incl) to accommodate the total number of buses (start_bus - end_bus) allocated to it.

Example

```

"rootbridge/rb0": {
    "ecam_start": 0x60000000,
    "ecam_end_incl": 0x67ffffff,
    "mem32_start": 0x70000000,
    "mem32_end_incl": 0x73ffffff,
    "mem64_start": 0x500000000,
    "mem64_end_incl": 0x67ffffff,
    "ecam_start_bus_number": 0x0,

    "_downstream_": {
        "ahci/ahci0": {
            "device": 30,
            "function": 0,
            "image_path": "",
            "express_capability_device_type": 9
        },
        "ahci/ahci1": {
            "device": 31,
            "function": 0,
            "express_capability_device_type": 9,
            "image_path": ""
        }
    }
}

```

12.9 Exerciser

Exerciser is a PCIe device used to generate various stimuli that can help test PCIe/SMMU integration in the system.

Table 12-6: Default values for endpoint parameters

Endpoint parameter	Default value
device	0
function	0
vendor_id	0x13B5
device_id	0xED01
base_class	0xED

Endpoint parameter	Default value
sub_class	0
bar0_64bit	false
bar1_64bit	false
bar2_64bit	false
bar3_64bit	false
bar4_64bit	false
bar0_log2_size	12
bar1_log2_size	14
bar2_log2_size	15
bar3_log2_size	0
bar4_log2_size	0
bar5_log2_size	12
uses_interrupt	true
interrupt_pin_index	1
multi_function	false
pcie_version	2
prog_iface	0
rev_id	0
subsys_id	0
subsys_vendor_id	0x13B5
express_capability_device_type	0
msix_support	true
msix_pba_bar	4
msix_table_bar	2
msix_table_size	2048
power_mgmt_capability	true
pasid_supported	false
ext_fmt_field_supported	true
extended_tag_supported	true
link_port_number	0
pri_supported	true
rber_supported	true
slot_and_root_status_msi_idx	0
tag_10bit_completer_supported	true
tag_10bit_requester_supported	true
aspm_optionality_compliant	true
ats_supported	true
error_injection_supported	false
aer_supported	false

Exerciser parameter and default value

memory_bar

BAR index to be used for exerciser memory access. Type: int, min: 0, max: 5, default: 1.

Example

```
"exerciser/exerciser0": {
  "device": 1,
  "function": 0,
  "interrupt_pin_index": 1,
  "memory_bar": 3,
  "express_capability_device_type": 0
}
```

12.10 Example hierarchy for a single ECAM configuration

The absence of a root bridge before the beginning of the device hierarchy implies a single ECAM configuration.

```
{
  "ahci/ahci0": {
    "device": 30,
    "function": 0,
    "image_path": "",
    "express_capability_device_type": 9
  },
  "smmuv3testengine/smmuv3testengine3": {
    "device": 15,
    "function": 0,
    "express_capability_device_type": 9
  },
  "rootport/rootport0": {
    "device_number": 2,
    "__downstream__": {
      "ahci/ahci1": {
        "device": 0,
        "function": 0,
        "image_path": "",
        "multi_function": true,
      },
      "ahci/ahci2": {
        "device": 0,
        "function": 1,
        "image_path": ""
      }
    }
  },
  "rootport/rootport1": {
    "device_number": 5,
    "__downstream__": {
      "ahci/ahci3": {
        "device": 0,
        "function": 0,
        "image_path": ""
      }
    }
  },
  "rootport/rootport2": {
    "device_number": 6,
    "__downstream__": {
      "switch/switch0": {
```

```

        "device_number": 0,
        "___downstream_10": {
            "ahci/ahci4": {}
        },
        "___downstream_20": {
            "ahci/ahci5": {}
        }
    }
}
}
}
}
}

```

12.11 Example hierarchy for two ECAM configuration

This example shows the JSON file for two ECAMs.

```

{
  "rootbridge/rb0": {
    "ecam_start": 0x60000000,

13. Base Platform FVPs

This chapter describes the Base Platform FVPs contained in the FVP Standard Library and the Arm Architecture Envelope Models (AEM) FVPs.

For the Base Platform memory map, see [Base Platform memory map](#) in the *Fast Models Reference Guide*.

13.1 FVP_Base_AEMv8R

List of instances in FVP_Base_AEMv8R.

FVP_Base_AEMv8R instances

FVP_Base_AEMv8R

Base Platform Compute Subsystem for AEMv8RMPCT.

Type: FVP_Base_AEMv8R.

FVP_Base_AEMv8R.bp

Peripherals and address map for the Base Platform.

Type: BasePlatformPeripherals.

FVP_Base_AEMv8R.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_AEMv8R.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_AEMv8R.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_AEMv8R.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_AEMv8R.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_AEMv8R.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_AEMv8R.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_AEMv8R.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_AEMv8R.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMv8R.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMv8R.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMv8R.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMv8R.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMv8R.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_AEMv8R.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_AEMv8R.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_AEMv8R.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_AEMv8R.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_AEMv8R.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_AEMv8R.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_AEMv8R.bp.hdlcd0.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_AEMv8R.bp.hdlcd0.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMv8R.bp.hd1cd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMv8R.bp.hd1cd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMv8R.bp.hd1cd0_labeller

Type: [Labeller](#).

FVP_Base_AEMv8R.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_AEMv8R.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_AEMv8R.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMv8R.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMv8R.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMv8R.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMv8R.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_AEMv8R.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_AEMv8R.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_AEMv8R.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMv8R.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_AEMv8R.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMv8R.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMv8R.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMv8R.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMv8R.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_AEMv8R.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMv8R.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMv8R.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMv8R.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMv8R.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_AEMv8R.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMv8R.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMv8R.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMv8R.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMv8R.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_AEMv8R.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMv8R.bp.pl011_uart3.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_AEMv8R.bp.pl011_uart3.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMv8R.bp.pl011_uart3.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMv8R.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_AEMv8R.bp.pl031_rtc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_AEMv8R.bp.pl031_rtc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_AEMv8R.bp.pl031_rtc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMv8R.bp.pl031_rtc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMv8R.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_AEMv8R.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMv8R.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMv8R.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMv8R.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMv8R.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_AEMv8R.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_AEMv8R.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_AEMv8R.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_AEMv8R.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMv8R.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMv8R.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMv8R.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMv8R.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_AEMv8R.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_AEMv8R.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_AEMv8R.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMv8R.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMv8R.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMv8R.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMv8R.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_AEMv8R.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMv8R.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMv8R.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMv8R.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMv8R.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMv8R.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_AEMv8R.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_AEMv8R.bp.r1_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMv8R.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMv8R.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMv8R.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMv8R.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMv8R.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_AEMv8R.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_AEMv8R.bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_Base_AEMv8R.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_AEMv8R.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMv8R.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMv8R.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMv8R.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMv8R.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_AEMv8R.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMv8R.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_AEMv8R.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_AEMv8R.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_AEMv8R.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_AEMv8R.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_AEMv8R.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_AEMv8R.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_AEMv8R.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_AEMv8R.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMv8R.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMv8R.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMv8R.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMv8R.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_AEMv8R.bp.ve_sysregs

Type: [vE_SysRegs](#).

FVP_Base_AEMv8R.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_AEMv8R.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_AEMv8R.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_AEMv8R.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_AEMv8R.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_AEMv8R.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_AEMv8R.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_AEMv8R.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_AEMv8R.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_AEMv8R.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_AEMv8R.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_AEMv8R.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_AEMv8R.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_AEMv8R.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_AEMv8R.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMv8R.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMv8R.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_AEMv8R.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMv8R.cluster0

ARMAEMv8-R Cluster CT model.

Type: [Cluster_ARMAEMv8-R_MP](#).

FVP_Base_AEMv8R.cluster0.cpu0

ARMAEMv8-R MP CT model.

Type: [ARMAEMv8-R_MP](#).

FVP_Base_AEMv8R.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_AEMv8R.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_AEMv8R.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_AEMv8R.cluster0.cpu1

ARMAEMv8-R MP CT model.

Type: [ARMAEMv8-R_MP](#).

FVP_Base_AEMv8R.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_AEMv8R.cluster0.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_AEMv8R.cluster0.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_AEMv8R.cluster0.cpu2

ARMAEMv8-R MP CT model.

Type: [ARMAEMv8-R_MP](#).

FVP_Base_AEMv8R.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_AEMv8R.cluster0.cpu2.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_AEMv8R.cluster0.cpu2.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_AEMv8R.cluster0.cpu3

ARMAEMv8-R MP CT model.

Type: [ARMAEMv8-R_MP](#).

FVP_Base_AEMv8R.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_AEMv8R.cluster0.cpu3.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_AEMv8R.cluster0.cpu3.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_AEMv8R.cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_AEMv8R.cluster0_labeller

Type: [Labeller](#).

FVP_Base_AEMv8R.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_AEMv8R.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_AEMv8R.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_AEMv8R.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_AEMv8R.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMv8R.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMv8R.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMv8R.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.2 FVP_Base_AEMvA-AEMvA

List of instances in FVP_Base_AEMvA-AEMvA.

FVP_Base_AEMvA-AEMvA instances

FVP_Base_AEMvA_AEMvA

Base Platform Compute Subsystem for AEMvACT and AEMvACT.

Type: [FVP_Base_AEMvA_AEMvA](#).

FVP_Base_AEMvA_AEMvA.bp

Peripherals and address map for the Base Platform.

Type: BasePlatformPeripherals.

FVP_Base_AEMvA_AEMvA.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_AEMvA_AEMvA.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_AEMvA_AEMvA.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_AEMvA_AEMvA.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_AEMvA_AEMvA.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_AEMvA_AEMvA.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_AEMvA_AEMvA.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_AEMvA_AEMvA.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_AEMvA_AEMvA.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMvA_AEMvA.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMvA_AEMvA.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMvA_AEMvA.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMvA_AEMvA.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMvA_AEMvA.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_AEMvA_AEMvA.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_AEMvA_AEMvA.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_AEMvA_AEMvA.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_AEMvA_AEMvA.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_AEMvA_AEMvA.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_AEMvA_AEMvA.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLC](#).

FVP_Base_AEMvA_AEMvA.bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMvA_AEMvA.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMvA_AEMvA.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMvA_AEMvA.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMvA_AEMvA.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_AEMvA_AEMvA.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_AEMvA_AEMvA.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_AEMvA_AEMvA.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMvA_AEMvA.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMvA_AEMvA.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMvA_AEMvA.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMvA_AEMvA.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_AEMvA_AEMvA.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_AEMvA_AEMvA.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_AEMvA_AEMvA.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart1.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart1.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart1.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart2.clk_divider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart2.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart2.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMvA_AEMvA.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMvA_AEMvA.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_AEMvA_AEMvA.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMvA_AEMvA.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMvA_AEMvA.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMvA_AEMvA.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMvA_AEMvA.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_AEMvA_AEMvA.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMvA_AEMvA.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMvA_AEMvA.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMvA_AEMvA.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMvA_AEMvA.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_AEMvA_AEMvA.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_AEMvA_AEMvA.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_AEMvA_AEMvA.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_AEMvA_AEMvA.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMvA_AEMvA.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMvA_AEMvA.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMvA_AEMvA.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMvA_AEMvA.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_AEMvA_AEMvA.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_AEMvA_AEMvA.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_AEMvA_AEMvA.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMvA_AEMvA.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMvA_AEMvA.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMvA_AEMvA.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMvA_AEMvA.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_AEMvA_AEMvA.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMvA_AEMvA.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMvA_AEMvA.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMvA_AEMvA.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMvA_AEMvA.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMvA_AEMvA.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_AEMvA_AEMvA.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_AEMvA_AEMvA.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMvA_AEMvA.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMvA_AEMvA.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMvA_AEMvA.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMvA_AEMvA.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMvA_AEMvA.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_AEMvA_AEMvA.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_AEMvA_AEMvA.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_AEMvA_AEMvA.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_AEMvA_AEMvA.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMvA_AEMvA.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMvA_AEMvA.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMvA_AEMvA.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMvA_AEMvA.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_AEMvA_AEMvA.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMvA_AEMvA.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_AEMvA_AEMvA.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_AEMvA_AEMvA.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_AEMvA_AEMvA.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_AEMvA_AEMvA.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_AEMvA_AEMvA.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_AEMvA_AEMvA.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_AEMvA_AEMvA.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_AEMvA_AEMvA.bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_AEMvA_AEMvA.bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_AEMvA_AEMvA.bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMvA_AEMvA.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMvA_AEMvA.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_AEMvA_AEMvA.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_AEMvA_AEMvA.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_AEMvA_AEMvA.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_AEMvA_AEMvA.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_AEMvA_AEMvA.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_AEMvA_AEMvA.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [VirtioBlockMMIO](#).

FVP_Base_AEMvA_AEMvA.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_AEMvA_AEMvA.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_AEMvA_AEMvA.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_AEMvA_AEMvA.bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_Base_AEMvA_AEMvA.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_AEMvA_AEMvA.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMvA_AEMvA.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMvA_AEMvA.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMvA_AEMvA.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_AEMvA_AEMvA.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_AEMvA_AEMvA.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_AEMvA_AEMvA.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_AEMvA_AEMvA.cluster0

ARM AEMvA Cluster CT model.

Type: [Cluster_ARM_AEM-A_MP](#).

FVP_Base_AEMvA_AEMvA.cluster0.cpu0

ARM AEM-A MP CT model.

Type: [ARM_AEM-A_MP](#).

FVP_Base_AEMvA_AEMvA.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_AEMvA_AEMvA.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_AEMvA_AEMvA.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_AEMvA_AEMvA.cluster0.cpu1

ARM AEM-A MP CT model.

Type: [ARM_AEM-A_MP](#).

FVP_Base_AEMvA_AEMvA.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_AEMvA_AEMvA.cluster0.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_AEMvA_AEMvA.cluster0.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_AEMvA_AEMvA.cluster0.cpu2

ARM AEM-A MP CT model.

Type: [ARM_AEM-A_MP](#).

FVP_Base_AEMvA_AEMvA.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_AEMvA_AEMvA.cluster0.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_AEMvA_AEMvA.cluster0.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_AEMvA_AEMvA.cluster0.cpu3

ARM AEM-A MP CT model.

Type: [ARM_AEM-A_MP](#).

FVP_Base_AEMvA_AEMvA.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_AEMvA_AEMvA.cluster0.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_AEMvA_AEMvA.cluster0.cpu3.l1icache

PV Cache.

Type: pVCache.

FVP_Base_AEMvA_AEMvA.cluster0.l2_cache

PV Cache.

Type: pVCache.

FVP_Base_AEMvA_AEMvA.cluster0_labeller

Type: [Labeller](#).

FVP_Base_AEMvA_AEMvA.cluster1

ARM AEMvA Cluster CT model.

Type: [Cluster_ARM_AEM-A_MP](#).

FVP_Base_AEMvA_AEMvA.cluster1.cpu0

ARM AEM-A MP CT model.

Type: [ARM_AEM-A_MP](#).

FVP_Base_AEMvA_AEMvA.cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_AEMvA_AEMvA.cluster1.cpu0.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_AEMvA_AEMvA.cluster1.cpu0.l1icache

PV Cache.

Type: pVCache.

FVP_Base_AEMvA_AEMvA.cluster1.cpu1

ARM AEM-A MP CT model.

Type: [ARM_AEM-A_MP](#).**FVP_Base_AEMvA_AEMvA.cluster1.cpu1.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_AEMvA_AEMvA.cluster1.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_AEMvA_AEMvA.cluster1.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_Base_AEMvA_AEMvA.cluster1.cpu2

ARM AEM-A MP CT model.

Type: [ARM_AEM-A_MP](#).**FVP_Base_AEMvA_AEMvA.cluster1.cpu2.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_AEMvA_AEMvA.cluster1.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_AEMvA_AEMvA.cluster1.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_AEMvA_AEMvA.cluster1.cpu3

ARM AEM-A MP CT model.

Type: [ARM_AEM-A_MP](#).**FVP_Base_AEMvA_AEMvA.cluster1.cpu3.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_AEMvA_AEMvA.cluster1.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_AEMvA_AEMvA.cluster1.cpu3.l1icache

PV Cache.

Type: pVCache.

FVP_Base_AEMvA_AEMvA.cluster1.l2_cache

PV Cache.

Type: pVCache.

FVP_Base_AEMvA_AEMvA.cluster1_labeller

Type: [Labeller](#).

FVP_Base_AEMvA_AEMvA.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_AEMvA_AEMvA.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_AEMvA_AEMvA.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_AEMvA_AEMvA.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_AEMvA_AEMvA.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_AEMvA_AEMvA.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_AEMvA_AEMvA.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_AEMvA_AEMvA.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.3 FVP_Base_Cortex-A32x1

List of instances in FVP_Base_Cortex-A32x1.

FVP_Base_Cortex-A32x1 instances

FVP_Base_Cortex_A32x1

Base Platform Compute Subsystem for ARMCortexA32x1CT.

Type: `FVP_Base_Cortex_A32x1`.

FVP_Base_Cortex_A32x1.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Cortex_A32x1.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A32x1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A32x1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A32x1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A32x1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A32x1.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A32x1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A32x1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A32x1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A32x1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A32x1.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A32x1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A32x1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A32x1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A32x1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A32x1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A32x1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A32x1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A32x1.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x1.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x1.bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x1.bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x1.bp.hdld0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A32x1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A32x1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A32x1.bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x1.bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x1.bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x1.bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A32x1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A32x1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A32x1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart2.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart2.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart2.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart3.clk_divider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart3.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart3.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A32x1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A32x1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A32x1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A32x1.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A32x1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A32x1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x1.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A32x1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A32x1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A32x1.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x1.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A32x1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A32x1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A32x1.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A32x1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A32x1.bp.sm91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A32x1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A32x1.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x1.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x1.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A32x1.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x1.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A32x1.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A32x1.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A32x1.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A32x1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A32x1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A32x1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A32x1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A32x1.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x1.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x1.bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x1.bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A32x1.bp.ve_sysregs

Type: `VE_SysRegs`.

FVP_Base_Cortex_A32x1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

FVP_Base_Cortex_A32x1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A32x1.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A32x1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

FVP_Base_Cortex_A32x1.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `VirtioBlockMMIO`.

FVP_Base_Cortex_A32x1.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A32x1.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A32x1.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A32x1.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A32x1.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A32x1.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x1.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x1.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A32x1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x1.cluster0

ARM Cortex-A32 Cluster CT model.

Type: [cluster_ARM_Cortex-A32](#).

FVP_Base_Cortex_A32x1.cluster0.cpu0

ARM Cortex-A32 CT model.

Type: [ARM_Cortex-A32](#).

FVP_Base_Cortex_A32x1.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A32x1.cluster0.cpu0.l1dcache

PV Cache.

Type: [pvCache](#).

FVP_Base_Cortex_A32x1.cluster0.cpu0.l1icache

PV Cache.

Type: [pvCache](#).

FVP_Base_Cortex_A32x1.cluster0.l2_cache

PV Cache.

Type: [pvCache](#).

FVP_Base_Cortex_A32x1.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A32x1.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A32x1.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A32x1.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A32x1.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A32x1.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x1.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x1.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x1.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.4 FVP_Base_Cortex-A32x2

List of instances in FVP_Base_Cortex-A32x2.

FVP_Base_Cortex-A32x2 instances

FVP_Base_Cortex_A32x2

Base Platform Compute Subsystem for ARMCortexA32x2CT.

Type: [FVP_Base_Cortex_A32x2](#).

FVP_Base_Cortex_A32x2.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A32x2.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A32x2.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A32x2.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A32x2.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A32x2.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A32x2.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A32x2.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A32x2.bp.audioout

SDL based Audio Output for PLO41_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A32x2.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x2.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x2.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x2.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x2.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x2.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_A32x2.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A32x2.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A32x2.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A32x2.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A32x2.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A32x2.bp.hd1cd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLC](#).

FVP_Base_Cortex_A32x2.bp.hdlcd0.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x2.bp.hdlcd0.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x2.bp.hdlcd0.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x2.bp.hdlcd0.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x2.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A32x2.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A32x2.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A32x2.bp.mmc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x2.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x2.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x2.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x2.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A32x2.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A32x2.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A32x2.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x2.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x2.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A32x2.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x2.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x2.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x2.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x2.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A32x2.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x2.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x2.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x2.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x2.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A32x2.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A32x2.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A32x2.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A32x2.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x2.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x2.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A32x2.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A32x2.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A32x2.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x2.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x2.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x2.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x2.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A32x2.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x2.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x2.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x2.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x2.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x2.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A32x2.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A32x2.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x2.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x2.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x2.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x2.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x2.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A32x2.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A32x2.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A32x2.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A32x2.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x2.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x2.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x2.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x2.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A32x2.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x2.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A32x2.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A32x2.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A32x2.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A32x2.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A32x2.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A32x2.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A32x2.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A32x2.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x2.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x2.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x2.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x2.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A32x2.bp.ve_sysregs

Type: [vE_SysRegs](#).

FVP_Base_Cortex_A32x2.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

FVP_Base_Cortex_A32x2.bp.virtio_net

VirtioNet device over MMIO transport.

Type: `VirtioNetMMIO`.

FVP_Base_Cortex_A32x2.bp.virtio_net_labeller

Type: `Labeller`.

FVP_Base_Cortex_A32x2.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

FVP_Base_Cortex_A32x2.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `VirtioBlockMMIO`.

FVP_Base_Cortex_A32x2.bp.virtio_blockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A32x2.bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A32x2.bp.virtio_p9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A32x2.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A32x2.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A32x2.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A32x2.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x2.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x2.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x2.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x2.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x2.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A32x2.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x2.cluster0

ARM Cortex-A32 Cluster CT model.

Type: [cluster_ARM_Cortex-A32](#).

FVP_Base_Cortex_A32x2.cluster0.cpu0

ARM Cortex-A32 CT model.

Type: [ARM_Cortex-A32](#).

FVP_Base_Cortex_A32x2.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A32x2.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A32x2.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A32x2.cluster0.cpu1

ARM Cortex-A32 CT model.

Type: [ARM_Cortex-A32](#).

FVP_Base_Cortex_A32x2.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A32x2.cluster0.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A32x2.cluster0.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A32x2.cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A32x2.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A32x2.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A32x2.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A32x2.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A32x2.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A32x2.pctl.timer_reset

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x2.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x2.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x2.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.5 FVP_Base_Cortex-A32x4

List of instances in FVP_Base_Cortex-A32x4.

FVP_Base_Cortex-A32x4 instances

FVP_Base_Cortex_A32x4

Base Platform Compute Subsystem for ARMCortexA32x4CT.

Type: [FVP_Base_Cortex_A32x4](#).

FVP_Base_Cortex_A32x4.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A32x4.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A32x4.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A32x4.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A32x4.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A32x4.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A32x4.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A32x4.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A32x4.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A32x4.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x4.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x4.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x4.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x4.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x4.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A32x4.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A32x4.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A32x4.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A32x4.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A32x4.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A32x4.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_Base_Cortex_A32x4.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x4.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x4.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x4.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x4.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A32x4.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A32x4.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A32x4.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x4.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x4.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x4.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x4.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A32x4.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A32x4.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A32x4.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x4.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x4.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A32x4.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x4.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x4.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x4.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x4.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A32x4.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x4.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x4.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x4.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x4.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A32x4.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A32x4.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A32x4.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A32x4.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x4.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x4.bp.pl1111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A32x4.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A32x4.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A32x4.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x4.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x4.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x4.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x4.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A32x4.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x4.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x4.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x4.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x4.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x4.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A32x4.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A32x4.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x4.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x4.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x4.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x4.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x4.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A32x4.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A32x4.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A32x4.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A32x4.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x4.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x4.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x4.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x4.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A32x4.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x4.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A32x4.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A32x4.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A32x4.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A32x4.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A32x4.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A32x4.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A32x4.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A32x4.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x4.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x4.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x4.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x4.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A32x4.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A32x4.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A32x4.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A32x4.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A32x4.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A32x4.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [VirtioBlockMMIO](#).

FVP_Base_Cortex_A32x4.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A32x4.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A32x4.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A32x4.bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_Base_Cortex_A32x4.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A32x4.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A32x4.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A32x4.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x4.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A32x4.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A32x4.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A32x4.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A32x4.cluster0

ARM Cortex-A32 Cluster CT model.

Type: [Cluster_ARM_Cortex-A32](#).

FVP_Base_Cortex_A32x4.cluster0.cpu0

ARM Cortex-A32 CT model.

Type: [ARM_Cortex-A32](#).

FVP_Base_Cortex_A32x4.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A32x4.cluster0.cpu0.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A32x4.cluster0.cpu0.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A32x4.cluster0.cpu1

ARM Cortex-A32 CT model.

Type: [ARM_Cortex-A32](#).**FVP_Base_Cortex_A32x4.cluster0.cpu1.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A32x4.cluster0.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A32x4.cluster0.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A32x4.cluster0.cpu2

ARM Cortex-A32 CT model.

Type: [ARM_Cortex-A32](#).**FVP_Base_Cortex_A32x4.cluster0.cpu2.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A32x4.cluster0.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A32x4.cluster0.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A32x4.cluster0.cpu3

ARM Cortex-A32 CT model.

Type: [ARM_Cortex-A32](#).**FVP_Base_Cortex_A32x4.cluster0.cpu3.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A32x4.cluster0.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A32x4.cluster0.cpu3.l1icache

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_A32x4.cluster0.l2_cache**

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_A32x4.cluster0_labeller**Type: [Labeller](#).**FVP_Base_Cortex_A32x4.dapmemlogger**

Bus Logger.

Type: [PVBusLogger](#).**FVP_Base_Cortex_A32x4.elfloader**

ELF loader component.

Type: [ElfLoader](#).**FVP_Base_Cortex_A32x4.gic_distributor**

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).**FVP_Base_Cortex_A32x4.pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).**FVP_Base_Cortex_A32x4.pctl.timer_reset**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).**FVP_Base_Cortex_A32x4.pctl.timer_reset.timer**

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).**FVP_Base_Cortex_A32x4.pctl.timer_reset.timer.thread**A [SchedulerThread](#) instance represents a co-routine thread in the simulation.Type: [SchedulerThread](#).

FVP_Base_Cortex_A32x4.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.6 FVP_Base_Cortex-A34x1

List of instances in FVP_Base_Cortex-A34x1.

FVP_Base_Cortex-A34x1 instances

FVP_Base_Cortex_A34x1

Base Platform Compute Subsystem for ARMCortexA34x1CT.

Type: [FVP_Base_Cortex_A34x1](#).

FVP_Base_Cortex_A34x1.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A34x1.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A34x1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A34x1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A34x1.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A34x1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A34x1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A34x1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A34x1.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A34x1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_A34x1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A34x1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A34x1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A34x1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A34x1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A34x1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A34x1.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x1.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x1.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x1.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x1.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A34x1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A34x1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A34x1.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x1.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x1.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x1.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A34x1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A34x1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A34x1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A34x1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A34x1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A34x1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A34x1.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A34x1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A34x1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x1.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A34x1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A34x1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A34x1.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x1.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A34x1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A34x1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A34x1.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A34x1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A34x1.bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_Base_Cortex_A34x1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A34x1.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x1.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x1.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A34x1.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x1.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A34x1.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A34x1.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A34x1.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A34x1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A34x1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A34x1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A34x1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A34x1.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x1.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x1.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x1.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A34x1.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A34x1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A34x1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A34x1.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A34x1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A34x1.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A34x1.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A34x1.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A34x1.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A34x1.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A34x1.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A34x1.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A34x1.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A34x1.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A34x1.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A34x1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A34x1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x1.cluster0

ARM Cortex-A34 Cluster CT model.

Type: [Cluster_ARM_Cortex-A34](#).

FVP_Base_Cortex_A34x1.cluster0.cpu0

ARM Cortex-A34 CT model.

Type: [ARM_Cortex-A34](#).

FVP_Base_Cortex_A34x1.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A34x1.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A34x1.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A34x1.cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A34x1.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A34x1.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A34x1.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A34x1.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A34x1.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A34x1.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x1.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x1.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x1.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.7 FVP_Base_Cortex-A34x2

List of instances in FVP_Base_Cortex-A34x2.

FVP_Base_Cortex-A34x2 instances

FVP_Base_Cortex_A34x2

Base Platform Compute Subsystem for ARMCortexA34x2CT.

Type: `FVP_Base_Cortex_A34x2`.

FVP_Base_Cortex_A34x2.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Cortex_A34x2.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A34x2.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A34x2.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A34x2.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A34x2.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A34x2.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A34x2.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A34x2.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A34x2.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A34x2.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A34x2.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A34x2.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x2.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x2.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x2.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x2.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x2.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A34x2.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A34x2.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A34x2.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A34x2.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A34x2.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A34x2.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A34x2.bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x2.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x2.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x2.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x2.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A34x2.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A34x2.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A34x2.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x2.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x2.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x2.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x2.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A34x2.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A34x2.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A34x2.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x2.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x2.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A34x2.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x2.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x2.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x2.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x2.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A34x2.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x2.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x2.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x2.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x2.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A34x2.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A34x2.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A34x2.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A34x2.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x2.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x2.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A34x2.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A34x2.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A34x2.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x2.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x2.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x2.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x2.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A34x2.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x2.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x2.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x2.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x2.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x2.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A34x2.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A34x2.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x2.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x2.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x2.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x2.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x2.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A34x2.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A34x2.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A34x2.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A34x2.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x2.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x2.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x2.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x2.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A34x2.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x2.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A34x2.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A34x2.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A34x2.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A34x2.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A34x2.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A34x2.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A34x2.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A34x2.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x2.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x2.bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x2.bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x2.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A34x2.bp.ve_sysregs

Type: `VE_SysRegs`.

FVP_Base_Cortex_A34x2.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

FVP_Base_Cortex_A34x2.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A34x2.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A34x2.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

FVP_Base_Cortex_A34x2.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `VirtioBlockMMIO`.

FVP_Base_Cortex_A34x2.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A34x2.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A34x2.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A34x2.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A34x2.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A34x2.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x2.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x2.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x2.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x2.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x2.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A34x2.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x2.cluster0

ARM Cortex-A34 Cluster CT model.

Type: [cluster_ARM_Cortex-A34](#).

FVP_Base_Cortex_A34x2.cluster0.cpu0

ARM Cortex-A34 CT model.

Type: [ARM_Cortex-A34](#).

FVP_Base_Cortex_A34x2.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A34x2.cluster0.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A34x2.cluster0.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A34x2.cluster0.cpu1

ARM Cortex-A34 CT model.

Type: [ARM_Cortex-A34](#).

FVP_Base_Cortex_A34x2.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A34x2.cluster0.cpu1.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A34x2.cluster0.cpu1.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A34x2.cluster0.l2_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A34x2.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A34x2.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A34x2.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A34x2.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A34x2.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A34x2.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x2.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x2.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x2.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.8 FVP_Base_Cortex-A34x4

List of instances in FVP_Base_Cortex-A34x4.

FVP_Base_Cortex-A34x4 instances

FVP_Base_Cortex_A34x4

Base Platform Compute Subsystem for ARMCortexA34x4CT.

Type: `FVP_Base_Cortex_A34x4`.

FVP_Base_Cortex_A34x4.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Cortex_A34x4.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A34x4.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A34x4.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A34x4.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A34x4.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A34x4.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A34x4.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A34x4.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A34x4.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A34x4.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A34x4.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A34x4.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x4.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x4.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x4.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x4.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x4.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A34x4.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A34x4.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A34x4.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A34x4.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A34x4.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A34x4.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A34x4.bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x4.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x4.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x4.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x4.bp.hdld0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A34x4.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A34x4.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A34x4.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x4.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x4.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x4.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x4.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A34x4.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A34x4.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A34x4.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x4.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x4.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A34x4.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x4.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x4.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x4.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x4.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A34x4.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x4.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x4.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x4.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x4.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A34x4.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A34x4.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A34x4.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A34x4.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x4.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x4.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A34x4.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A34x4.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A34x4.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x4.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x4.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x4.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x4.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A34x4.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x4.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x4.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x4.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x4.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x4.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A34x4.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A34x4.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x4.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x4.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x4.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x4.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x4.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A34x4.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A34x4.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A34x4.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A34x4.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x4.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x4.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x4.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x4.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A34x4.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x4.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A34x4.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A34x4.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A34x4.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A34x4.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A34x4.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A34x4.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A34x4.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A34x4.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x4.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x4.bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x4.bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x4.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A34x4.bp.ve_sysregs

Type: `VE_SysRegs`.

FVP_Base_Cortex_A34x4.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

FVP_Base_Cortex_A34x4.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A34x4.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A34x4.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

FVP_Base_Cortex_A34x4.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `VirtioBlockMMIO`.

FVP_Base_Cortex_A34x4.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A34x4.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A34x4.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A34x4.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A34x4.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A34x4.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x4.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x4.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x4.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A34x4.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A34x4.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A34x4.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A34x4.cluster0

ARM Cortex-A34 Cluster CT model.

Type: [cluster_ARM_Cortex-A34](#).

FVP_Base_Cortex_A34x4.cluster0.cpu0

ARM Cortex-A34 CT model.

Type: [ARM_Cortex-A34](#).

FVP_Base_Cortex_A34x4.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A34x4.cluster0.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A34x4.cluster0.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A34x4.cluster0.cpu1

ARM Cortex-A34 CT model.

Type: [ARM_Cortex-A34](#).

FVP_Base_Cortex_A34x4.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A34x4.cluster0.cpu1.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A34x4.cluster0.cpu1.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A34x4.cluster0.cpu2

ARM Cortex-A34 CT model.

Type: [ARM_Cortex-A34](#).

FVP_Base_Cortex_A34x4.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A34x4.cluster0.cpu2.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A34x4.cluster0.cpu2.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A34x4.cluster0.cpu3

ARM Cortex-A34 CT model.

Type: [ARM_Cortex-A34](#).

FVP_Base_Cortex_A34x4.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A34x4.cluster0.cpu3.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A34x4.cluster0.cpu3.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A34x4.cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A34x4.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A34x4.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A34x4.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A34x4.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A34x4.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A34x4.pctl.timer_reset

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A34x4.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A34x4.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A34x4.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.9 FVP_Base_Cortex-A35x1

List of instances in FVP_Base_Cortex-A35x1.

FVP_Base_Cortex-A35x1 instances

FVP_Base_Cortex_A35x1

Base Platform Compute Subsystem for ARMCortexA35x1CT.

Type: [FVP_Base_Cortex_A35x1](#).

FVP_Base_Cortex_A35x1.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A35x1.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A35x1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A35x1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A35x1.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A35x1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A35x1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A35x1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A35x1.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A35x1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A35x1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A35x1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A35x1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A35x1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A35x1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A35x1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_Base_Cortex_A35x1.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x1.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x1.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x1.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x1.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A35x1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A35x1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A35x1.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x1.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x1.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x1.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A35x1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A35x1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A35x1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A35x1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A35x1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A35x1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A35x1.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A35x1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A35x1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x1.bp.pl1111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A35x1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A35x1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A35x1.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x1.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A35x1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A35x1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A35x1.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A35x1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A35x1.bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_Base_Cortex_A35x1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A35x1.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x1.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x1.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A35x1.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x1.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A35x1.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A35x1.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A35x1.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A35x1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A35x1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A35x1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A35x1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A35x1.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x1.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x1.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x1.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A35x1.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A35x1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A35x1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A35x1.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A35x1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A35x1.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [VirtioBlockMMIO](#).

FVP_Base_Cortex_A35x1.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A35x1.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A35x1.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A35x1.bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_Base_Cortex_A35x1.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A35x1.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x1.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x1.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A35x1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x1.cluster0

ARM Cortex-A35 Cluster CT model.

Type: [Cluster_ARM_Cortex-A35](#).

FVP_Base_Cortex_A35x1.cluster0.cpu0

ARM Cortex-A35 CT model.

Type: [ARM_Cortex-A35](#).

FVP_Base_Cortex_A35x1.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A35x1.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A35x1.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A35x1.cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A35x1.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A35x1.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A35x1.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A35x1.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A35x1.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A35x1.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x1.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x1.pctl.timer_reset.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x1.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.10 FVP_Base_Cortex-A35x2

List of instances in FVP_Base_Cortex-A35x2.

FVP_Base_Cortex-A35x2 instances

FVP_Base_Cortex_A35x2

Base Platform Compute Subsystem for ARMCortexA35x2CT.

Type: [FVP_Base_Cortex_A35x2](#).

FVP_Base_Cortex_A35x2.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A35x2.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A35x2.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A35x2.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A35x2.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A35x2.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A35x2.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A35x2.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A35x2.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A35x2.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x2.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x2.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x2.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x2.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x2.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A35x2.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A35x2.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A35x2.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A35x2.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A35x2.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A35x2.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A35x2.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x2.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x2.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x2.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x2.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A35x2.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A35x2.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A35x2.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x2.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x2.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x2.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x2.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A35x2.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A35x2.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A35x2.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x2.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x2.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A35x2.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x2.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x2.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x2.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x2.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A35x2.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x2.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x2.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x2.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x2.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A35x2.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A35x2.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A35x2.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A35x2.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x2.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x2.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A35x2.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A35x2.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A35x2.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x2.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x2.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x2.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x2.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A35x2.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x2.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x2.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x2.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x2.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x2.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A35x2.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A35x2.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x2.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x2.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x2.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x2.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x2.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A35x2.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A35x2.bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_Base_Cortex_A35x2.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A35x2.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x2.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x2.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x2.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x2.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A35x2.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x2.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A35x2.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A35x2.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A35x2.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A35x2.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A35x2.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A35x2.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A35x2.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A35x2.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x2.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x2.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x2.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x2.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A35x2.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A35x2.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A35x2.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A35x2.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A35x2.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A35x2.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A35x2.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A35x2.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A35x2.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A35x2.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A35x2.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A35x2.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A35x2.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A35x2.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A35x2.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A35x2.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x2.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x2.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A35x2.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x2.cluster0

ARM Cortex-A35 Cluster CT model.

Type: [Cluster_ARM_Cortex-A35](#).

FVP_Base_Cortex_A35x2.cluster0.cpu0

ARM Cortex-A35 CT model.

Type: [ARM_Cortex-A35](#).

FVP_Base_Cortex_A35x2.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A35x2.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A35x2.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A35x2.cluster0.cpu1

ARM Cortex-A35 CT model.

Type: [ARM_Cortex-A35](#).

FVP_Base_Cortex_A35x2.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A35x2.cluster0.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A35x2.cluster0.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A35x2.cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A35x2.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A35x2.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A35x2.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A35x2.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A35x2.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A35x2.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x2.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x2.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x2.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.11 FVP_Base_Cortex-A35x4

List of instances in FVP_Base_Cortex-A35x4.

FVP_Base_Cortex-A35x4 instances

FVP_Base_Cortex_A35x4

Base Platform Compute Subsystem for ARMCortexA35x4CT.

Type: [FVP_Base_Cortex_A35x4](#).

FVP_Base_Cortex_A35x4.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A35x4.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A35x4.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A35x4.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A35x4.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A35x4.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A35x4.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A35x4.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A35x4.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A35x4.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x4.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x4.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x4.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x4.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x4.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_A35x4.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A35x4.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A35x4.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A35x4.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A35x4.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A35x4.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A35x4.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x4.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x4.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x4.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x4.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A35x4.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A35x4.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A35x4.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x4.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x4.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x4.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x4.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A35x4.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A35x4.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A35x4.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x4.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x4.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A35x4.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x4.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x4.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x4.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x4.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A35x4.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x4.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x4.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x4.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x4.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A35x4.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A35x4.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A35x4.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A35x4.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x4.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x4.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A35x4.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A35x4.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A35x4.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x4.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x4.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x4.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x4.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A35x4.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x4.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x4.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x4.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x4.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x4.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A35x4.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A35x4.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x4.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x4.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x4.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x4.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x4.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A35x4.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A35x4.bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_Base_Cortex_A35x4.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A35x4.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x4.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x4.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x4.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x4.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A35x4.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x4.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A35x4.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A35x4.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A35x4.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A35x4.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A35x4.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A35x4.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A35x4.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A35x4.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x4.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x4.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x4.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x4.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A35x4.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A35x4.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A35x4.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A35x4.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A35x4.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A35x4.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A35x4.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A35x4.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A35x4.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A35x4.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A35x4.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A35x4.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A35x4.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A35x4.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A35x4.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A35x4.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A35x4.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A35x4.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A35x4.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A35x4.cluster0

ARM Cortex-A35 Cluster CT model.

Type: [Cluster_ARM_Cortex-A35](#).

FVP_Base_Cortex_A35x4.cluster0.cpu0

ARM Cortex-A35 CT model.

Type: [ARM_Cortex-A35](#).

FVP_Base_Cortex_A35x4.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A35x4.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A35x4.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A35x4.cluster0.cpu1

ARM Cortex-A35 CT model.

Type: [ARM_Cortex-A35](#).

FVP_Base_Cortex_A35x4.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A35x4.cluster0.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A35x4.cluster0.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A35x4.cluster0.cpu2

ARM Cortex-A35 CT model.

Type: [ARM_Cortex-A35](#).

FVP_Base_Cortex_A35x4.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A35x4.cluster0.cpu2.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A35x4.cluster0.cpu2.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A35x4.cluster0.cpu3

ARM Cortex-A35 CT model.

Type: [ARM_Cortex-A35](#).

FVP_Base_Cortex_A35x4.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A35x4.cluster0.cpu3.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A35x4.cluster0.cpu3.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A35x4.cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A35x4.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A35x4.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A35x4.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A35x4.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A35x4.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A35x4.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A35x4.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A35x4.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A35x4.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.12 FVP_Base_Cortex-A510

List of instances in FVP_Base_Cortex-A510.

FVP_Base_Cortex-A510 instances

FVP_Base_Cortex_A510

Base Platform Compute Subsystem for ARMCortexA510CT.

Type: [FVP_Base_Cortex_A510](#).

FVP_Base_Cortex_A510.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Cortex_A510.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A510.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A510.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A510.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A510.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A510.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A510.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A510.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A510.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A510.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A510.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A510.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A510.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_A510.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A510.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A510.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A510.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A510.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A510.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_Base_Cortex_A510.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510.bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510.bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A510.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A510.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A510.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A510.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A510.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A510.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A510.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A510.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510.bp.pl011_uart1.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510.bp.pl011_uart1.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510.bp.pl011_uart1.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A510.bp.pl011_uart2.clk_divider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510.bp.pl011_uart2.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510.bp.pl011_uart2.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A510.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A510.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A510.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A510.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A510.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A510.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A510.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A510.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A510.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked `PS2Data` signals which can be routed to a `PL050_KMI` component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A510.bp.ps2keyboard.ps2_clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510.bp.ps2keyboard.ps2_clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510.bp.ps2keyboard.ps2_clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A510.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A510.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A510.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A510.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A510.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A510.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A510.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A510.bp.sp805_wdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A510.bp.sp805_wdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_Base_Cortex_A510.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

FVP_Base_Cortex_A510.bp.sp810_sysctrl.clkdiv_clk0

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A510.bp.sp810_sysctrl.clkdiv_clk1

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A510.bp.sp810_sysctrl.clkdiv_clk2

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A510.bp.sp810_sysctrl.clkdiv_clk3

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A510.bp.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_Base_Cortex_A510.bp.terminal_0

Telnet terminal interface.

Type: `TelnetTerminal`.

FVP_Base_Cortex_A510.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A510.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A510.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A510.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A510.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A510.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A510.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A510.bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510.bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510.bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A510.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A510.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A510.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A510.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A510.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A510.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [VirtioBlockMMIO](#).

FVP_Base_Cortex_A510.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A510.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A510.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A510.bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_Base_Cortex_A510.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A510.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A510.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510.cluster0

ARM Cortex-A510Cluster CT model.

Type: [cluster_ARM_Cortex-A510](#).

FVP_Base_Cortex_A510.cluster0.DSU.shared_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A510.cluster0.cpu0

ARM Cortex-A510 CT model.

Type: [ARM_Cortex-A510](#).

FVP_Base_Cortex_A510.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A510.cluster0.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A510.cluster0.cpu0.l1icache

PV Cache.

ARM Cortex-A510 CT model.

Type: [ARM_Cortex-A510](#).

FVP_Base_Cortex_A510.cluster0.cpu9.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A510.cluster0.cpu9.l1dcache

PV Cache.

Type: [pvCache](#).

FVP_Base_Cortex_A510.cluster0.cpu9.l1icache

PV Cache.

Type: [pvCache](#).

FVP_Base_Cortex_A510.cluster0.cpu9.l2cache

PV Cache.

Type: [pvCache](#).

FVP_Base_Cortex_A510.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A510.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A510.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A510.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A510.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A510.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.13 FVP_Base_Cortex-A510+Cortex-A710

List of instances in FVP_Base_Cortex-A510+Cortex-A710.

FVP_Base_Cortex-A510+Cortex-A710 instances

FVP_Base_Cortex_A510_Cortex_A710

Base Platform Compute Subsystem for ARMCortexA510CT_CortexA710CT.

Type: [FVP_Base_Cortex_A510_Cortex_A710](#).

FVP_Base_Cortex_A510_Cortex_A710.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A510_Cortex_A710.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A510_Cortex_A710.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A510_Cortex_A710.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A510_Cortex_A710.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.tzc_400

TrustZone Address Space Controller.

Type: [Tzc_400](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.ve_sysregs

Type: [ve_SysRegs](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [vedcc](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [virtioEntropyMMIO](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.vis

Display window for VE using Visualisation library.

Type: [veVisualisation](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A510_Cortex_A710.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A510_Cortex_A710.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A510_Cortex_A710.cluster0

ARM Cortex-A510, Cortex-A710 CT heterogeneous cluster model.

Type: `Cluster_ARM_Cortex510_CortexA710_Heterogeneous_Cluster`.

FVP_Base_Cortex_A510_Cortex_A710.cluster0.DSU.shared_cache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A510_Cortex_A710.cluster0.subcluster0

ARM Cortex-A510 CT Model in Heterogeneous Cluster.

Type: `ARM_Cortex-A510`.

FVP_Base_Cortex_A510_Cortex_A710.cluster0.subcluster0.cpu0

ARM Cortex-A510 CT model.

Type: `ARM_Cortex-A510`.

FVP_Base_Cortex_A510_Cortex_A710.cluster0.subcluster0.cpu0.l1dcache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A510_Cortex_A710.cluster0.subcluster0.cpu0.l1icache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A510_Cortex_A710.cluster0.subcluster0.cpu0.l2cache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A510_Cortex_A710.cluster0.subcluster1

ARM Cortex-A710 CT Model in Heterogeneous Cluster.

Type: `ARM_Cortex-A710`.

FVP_Base_Cortex_A510_Cortex_A710.cluster0.subcluster1.cpu0

ARM Cortex-A710 CT model.

Type: `ARM_Cortex-A710`.

FVP_Base_Cortex_A510_Cortex_A710.cluster0.subcluster1.cpu0.l1dcache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A510_Cortex_A710.cluster0.subcluster1.cpu0.l1icache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A510_Cortex_A710.cluster0.subcluster1.cpu0.l2cache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A510_Cortex_A710.cluster0_labeller

Type: `Labeller`.

FVP_Base_Cortex_A510_Cortex_A710.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A510_Cortex_A710.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A510_Cortex_A710.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A510_Cortex_A710.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A510_Cortex_A710.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A510_Cortex_A710.pctl.timer_reset.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A510_Cortex_A710.pctl.timer_reset.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.14 FVP_Base_Cortex-A520

List of instances in FVP_Base_Cortex-A520.

FVP_Base_Cortex-A520 instances

FVP_Base_Cortex_A520

Base Platform Compute Subsystem for ARMCortexA520CT.

Type: `FVP_Base_Cortex_A520`.

`FVP_Base_Cortex_A520.bp`

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

`FVP_Base_Cortex_A520.bp.Timer_0_1`

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

`FVP_Base_Cortex_A520.bp.Timer_0_1.clk_div0`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`FVP_Base_Cortex_A520.bp.Timer_0_1.clk_div1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`FVP_Base_Cortex_A520.bp.Timer_0_1.counter0`

Internal component used by SP804 Timer module.

Type: `CounterModule`.

`FVP_Base_Cortex_A520.bp.Timer_0_1.counter1`

Internal component used by SP804 Timer module.

Type: `CounterModule`.

`FVP_Base_Cortex_A520.bp.Timer_2_3`

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

`FVP_Base_Cortex_A520.bp.Timer_2_3.clk_div0`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`FVP_Base_Cortex_A520.bp.Timer_2_3.clk_div1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`FVP_Base_Cortex_A520.bp.Timer_2_3.counter0`

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A520.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A520.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A520.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A520.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A520.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A520.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A520.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A520.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A520.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_A520.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A520.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A520.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A520.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A520.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A520.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_Base_Cortex_A520.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A520.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A520.bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A520.bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A520.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A520.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A520.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A520.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A520.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A520.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A520.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A520.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A520.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A520.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A520.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A520.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A520.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A520.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A520.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A520.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A520.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A520.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A520.bp.pl011_uart1.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A520.bp.pl011_uart1.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A520.bp.pl011_uart1.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A520.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A520.bp.pl011_uart2.clk_divider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.pl011_uart2.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A520.bp.pl011_uart2.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A520.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A520.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A520.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A520.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A520.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A520.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A520.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A520.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A520.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A520.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A520.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A520.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A520.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A520.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A520.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A520.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A520.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A520.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A520.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A520.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A520.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A520.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A520.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A520.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A520.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A520.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A520.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A520.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked `PS2Data` signals which can be routed to a `PL050_KMI` component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A520.bp.ps2keyboard.ps2_clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A520.bp.ps2keyboard.ps2_clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A520.bp.ps2keyboard.ps2_clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A520.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A520.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A520.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A520.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A520.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A520.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A520.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A520.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A520.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A520.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A520.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A520.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A520.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A520.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A520.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A520.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A520.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A520.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A520.bp.sp805_wdog.clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A520.bp.sp805_wdog.clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A520.bp.sp805_wdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A520.bp.sp805_wdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A520.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A520.bp.sp810_sysctrl.clkdiv_clk0

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.sp810_sysctrl.clkdiv_clk1

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.sp810_sysctrl.clkdiv_clk2

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.sp810_sysctrl.clkdiv_clk3

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A520.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A520.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A520.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A520.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A520.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A520.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A520.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A520.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A520.bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A520.bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A520.bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A520.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A520.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A520.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A520.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A520.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A520.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A520.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A520.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [VirtioBlockMMIO](#).

FVP_Base_Cortex_A520.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A520.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A520.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A520.bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_Base_Cortex_A520.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A520.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A520.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A520.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A520.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A520.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A520.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A520.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A520.cluster0

ARM Cortex-A520 Cluster CT model.

Type: [cluster_ARM_Cortex-A520](#).

FVP_Base_Cortex_A520.cluster0.DSU.shared_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A520.cluster0.cpu0

ARM Cortex-A520 CT model.

Type: [ARM_Cortex-A520](#).

FVP_Base_Cortex_A520.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A520.cluster0.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

Base Platforms Power Controller.

Type: [Base_PowerController](#).**FVP_Base_Cortex_A520.pctl.timer_reset**

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A520.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A520.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A520.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex-A53x1 instances

FVP_Base_Cortex_A53x1

Base Platform Compute Subsystem for ARMCortexA53x1CT.

Type: [FVP_Base_Cortex_A53x1](#).

FVP_Base_Cortex_A53x1.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A53x1.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A53x1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A53x1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A53x1.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A53x1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A53x1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A53x1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A53x1.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A53x1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A53x1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A53x1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A53x1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A53x1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A53x1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A53x1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A53x1.bp.hdlcd0.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x1.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x1.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x1.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x1.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A53x1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A53x1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A53x1.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x1.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x1.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x1.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A53x1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A53x1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A53x1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart3

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A53x1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A53x1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A53x1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A53x1.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A53x1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A53x1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x1.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A53x1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A53x1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A53x1.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x1.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A53x1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A53x1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A53x1.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A53x1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A53x1.bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_Base_Cortex_A53x1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A53x1.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x1.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x1.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A53x1.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x1.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A53x1.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A53x1.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A53x1.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A53x1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A53x1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A53x1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A53x1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A53x1.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x1.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x1.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x1.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A53x1.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A53x1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A53x1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A53x1.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A53x1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `virtioEntropyMMIO`.

FVP_Base_Cortex_A53x1.bp.virtioBlockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A53x1.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A53x1.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A53x1.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A53x1.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A53x1.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A53x1.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A53x1.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A53x1.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A53x1.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A53x1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x1.cluster0

ARM Cortex-A53 Cluster CT model.

Type: [Cluster_ARM_Cortex-A53](#).

FVP_Base_Cortex_A53x1.cluster0.cpu0

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A53x1.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A53x1.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A53x1.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A53x1.cluster0.l2_cache

PV Cache.

Type: `PVCache`.

FVP_Base_Cortex_A53x1.cluster0_labeller

Type: `Labeller`.

FVP_Base_Cortex_A53x1.dapmemlogger

Bus Logger.

Type: `PVBusLogger`.

FVP_Base_Cortex_A53x1.elfloader

ELF loader component.

Type: `ElfLoader`.

FVP_Base_Cortex_A53x1.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: `GIC_IRI`.

FVP_Base_Cortex_A53x1.pctl

Base Platforms Power Controller.

Type: `Base_PowerController`.

FVP_Base_Cortex_A53x1.pctl.timer_reset

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A53x1.pctl.timer_reset.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A53x1.pctl.timer_reset.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A53x1.pctl.timer_reset.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

13.16 FVP_Base_Cortex-A53x2

List of instances in FVP_Base_Cortex-A53x2.

FVP_Base_Cortex-A53x2 instances

FVP_Base_Cortex_A53x2

Base Platform Compute Subsystem for ARMCortexA53x2CT.

Type: `FVP_Base_Cortex_A53x2`.

FVP_Base_Cortex_A53x2.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Cortex_A53x2.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A53x2.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A53x2.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A53x2.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A53x2.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A53x2.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A53x2.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A53x2.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A53x2.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A53x2.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A53x2.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A53x2.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x2.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x2.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x2.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x2.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x2.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A53x2.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A53x2.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A53x2.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A53x2.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A53x2.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A53x2.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A53x2.bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x2.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x2.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x2.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x2.bp.hdld0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A53x2.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A53x2.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A53x2.bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x2.bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x2.bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x2.bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x2.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A53x2.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A53x2.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A53x2.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x2.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x2.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A53x2.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x2.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x2.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x2.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x2.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A53x2.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x2.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x2.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x2.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x2.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A53x2.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A53x2.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A53x2.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A53x2.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x2.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x2.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A53x2.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A53x2.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A53x2.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x2.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x2.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x2.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x2.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A53x2.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x2.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x2.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x2.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x2.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x2.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A53x2.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A53x2.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x2.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x2.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x2.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x2.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x2.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A53x2.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A53x2.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A53x2.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A53x2.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x2.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x2.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x2.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x2.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A53x2.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x2.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A53x2.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A53x2.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A53x2.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A53x2.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A53x2.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A53x2.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A53x2.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A53x2.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x2.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x2.bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x2.bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x2.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A53x2.bp.ve_sysregs

Type: `VE_SysRegs`.

FVP_Base_Cortex_A53x2.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

FVP_Base_Cortex_A53x2.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A53x2.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A53x2.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

FVP_Base_Cortex_A53x2.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `VirtioBlockMMIO`.

FVP_Base_Cortex_A53x2.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A53x2.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A53x2.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A53x2.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A53x2.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A53x2.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x2.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x2.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x2.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x2.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x2.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A53x2.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x2.cluster0

ARM Cortex-A53 Cluster CT model.

Type: [cluster_ARM_Cortex-A53](#).

FVP_Base_Cortex_A53x2.cluster0.cpu0

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A53x2.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A53x2.cluster0.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A53x2.cluster0.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A53x2.cluster0.cpu1

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A53x2.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A53x2.cluster0.cpu1.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A53x2.cluster0.cpu1.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A53x2.cluster0.l2_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A53x2.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A53x2.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A53x2.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A53x2.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A53x2.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A53x2.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x2.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x2.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x2.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.17 FVP_Base_Cortex-A53x4

List of instances in FVP_Base_Cortex-A53x4.

FVP_Base_Cortex-A53x4 instances

FVP_Base_Cortex_A53x4

Base Platform Compute Subsystem for ARMCortexA53x4CT.

Type: `FVP_Base_Cortex_A53x4`.

FVP_Base_Cortex_A53x4.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Cortex_A53x4.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A53x4.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A53x4.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A53x4.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A53x4.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A53x4.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A53x4.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A53x4.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A53x4.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A53x4.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A53x4.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A53x4.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x4.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x4.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x4.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x4.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x4.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A53x4.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A53x4.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A53x4.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A53x4.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A53x4.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A53x4.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A53x4.bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x4.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x4.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x4.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x4.bp.hdld0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A53x4.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A53x4.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A53x4.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x4.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x4.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x4.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x4.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A53x4.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A53x4.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A53x4.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x4.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x4.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A53x4.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x4.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x4.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x4.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x4.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A53x4.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x4.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x4.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x4.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x4.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A53x4.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A53x4.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A53x4.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A53x4.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x4.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A53x4.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A53x4.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A53x4.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x4.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x4.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x4.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x4.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A53x4.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x4.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x4.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x4.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x4.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x4.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A53x4.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A53x4.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x4.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x4.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x4.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x4.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x4.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A53x4.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A53x4.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A53x4.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A53x4.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x4.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x4.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x4.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x4.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A53x4.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x4.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A53x4.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A53x4.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A53x4.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A53x4.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A53x4.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A53x4.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A53x4.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A53x4.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x4.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x4.bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x4.bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x4.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A53x4.bp.ve_sysregs

Type: `VE_SysRegs`.

FVP_Base_Cortex_A53x4.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

FVP_Base_Cortex_A53x4.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A53x4.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A53x4.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

FVP_Base_Cortex_A53x4.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `VirtioBlockMMIO`.

FVP_Base_Cortex_A53x4.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A53x4.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A53x4.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A53x4.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A53x4.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A53x4.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x4.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x4.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x4.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A53x4.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A53x4.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A53x4.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A53x4.cluster0

ARM Cortex-A53 Cluster CT model.

Type: [cluster_ARM_Cortex-A53](#).

FVP_Base_Cortex_A53x4.cluster0.cpu0

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A53x4.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A53x4.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A53x4.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A53x4.cluster0.cpu1

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A53x4.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A53x4.cluster0.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A53x4.cluster0.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A53x4.cluster0.cpu2

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A53x4.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A53x4.cluster0.cpu2.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A53x4.cluster0.cpu2.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A53x4.cluster0.cpu3

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A53x4.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A53x4.cluster0.cpu3.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A53x4.cluster0.cpu3.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A53x4.cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A53x4.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A53x4.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A53x4.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A53x4.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A53x4.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A53x4.pctl.timer_reset

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A53x4.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A53x4.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A53x4.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.18 FVP_Base_Cortex-A55

List of instances in FVP_Base_Cortex-A55.

FVP_Base_Cortex-A55 instances

FVP_Base_Cortex_A55

Base Platform Compute Subsystem for ARMCortexA55CT.

Type: [FVP_Base_Cortex_A55](#).

FVP_Base_Cortex_A55.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A55.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A55.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A55.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A55.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A55.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A55.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A55.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A55.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A55.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A55.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A55.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A55.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A55.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A55.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A55.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_Base_Cortex_A55.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A55.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A55.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A55.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A55.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A55.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A55.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A55.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A55.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A55.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A55.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.p1011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55.bp.p1011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55.bp.p1011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55.bp.p1011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55.bp.p1031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A55.bp.p1031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55.bp.p1031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55.bp.p1031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55.bp.p1031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55.bp.p1041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A55.bp.p1041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55.bp.p1041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55.bp.p1041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55.bp.p1041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55.bp.p1050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A55.bp.p1050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A55.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A55.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A55.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55.bp.pl1111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A55.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A55.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A55.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A55.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly

or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55.bp.ps2mouse.ps2_clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55.bp.ps2mouse.ps2_clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A55.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A55.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A55.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A55.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A55.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A55.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A55.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A55.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A55.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A55.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A55.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A55.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A55.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A55.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A55.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A55.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A55.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A55.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A55.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A55.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A55.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [VirtioBlockMMIO](#).

FVP_Base_Cortex_A55.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A55.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A55.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A55.bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_Base_Cortex_A55.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A55.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A55.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55.cluster0

ARM Cortex-A55 Cluster CT model.

Type: [Cluster_ARM_Cortex-A55](#).

FVP_Base_Cortex_A55.cluster0.DSU.shared_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A55.cluster0.cpu0

ARM Cortex-A55 CT model.

Type: [ARM_Cortex-A55](#).

FVP_Base_Cortex_A55.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A55.cluster0.cpu0.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A55.cluster0.cpu0.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A55.cluster0.cpu0.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A55.cluster0.cpu1

ARM Cortex-A55 CT model.

Type: [ARM_Cortex-A55](#).**FVP_Base_Cortex_A55.cluster0.cpu1.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A55.cluster0.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A55.cluster0.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A55.cluster0.cpu1.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A55.cluster0.cpu2

ARM Cortex-A55 CT model.

Type: [ARM_Cortex-A55](#).**FVP_Base_Cortex_A55.cluster0.cpu2.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A55.cluster0.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A55.cluster0.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A55.cluster0.cpu2.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A55.cluster0.cpu3

ARM Cortex-A55 CT model.

Type: [ARM_Cortex-A55](#).**FVP_Base_Cortex_A55.cluster0.cpu3.dtlb**

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A55.cluster0.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A55.cluster0.cpu3.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A55.cluster0.cpu3.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A55.cluster0.cpu4

ARM Cortex-A55 CT model.

Type: [ARM_Cortex-A55](#).**FVP_Base_Cortex_A55.cluster0.cpu4.dtlb**

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A55.cluster0.cpu4.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A55.cluster0.cpu4.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A55.cluster0.cpu4.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A55.cluster0.cpu5

ARM Cortex-A55 CT model.

Type: [ARM_Cortex-A55](#).**FVP_Base_Cortex_A55.cluster0.cpu5.dtlb**

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A55.cluster0.cpu5.l1dcache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A55.cluster0.cpu5.l1icache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A55.cluster0.cpu5.l2cache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A55.cluster0.cpu6

ARM Cortex-A55 CT model.

Type: [ARM_Cortex-A55](#).**FVP_Base_Cortex_A55.cluster0.cpu6.dtlb**

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A55.cluster0.cpu6.l1dcache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A55.cluster0.cpu6.l1icache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A55.cluster0.cpu6.l2cache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A55.cluster0.cpu7

ARM Cortex-A55 CT model.

Type: [ARM_Cortex-A55](#).**FVP_Base_Cortex_A55.cluster0.cpu7.dtlb**

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A55.cluster0.cpu7.l1dcache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A55.cluster0.cpu7.l1icache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A55.cluster0.cpu7.l2cache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A55.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A55.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A55.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A55.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A55.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A55.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55.pctl.timer_reset.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55.pctl.timer_reset.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.19 FVP_Base_Cortex-A55+Cortex-A76

List of instances in FVP_Base_Cortex-A55+Cortex-A76.

FVP_Base_Cortex-A55+Cortex-A76 instances

FVP_Base_Cortex_A55_Cortex_A76

Base Platform Compute Subsystem for ARMCortexA55CT_CortexA76CT.

Type: `FVP_Base_Cortex_A55_Cortex_A76`.

FVP_Base_Cortex_A55_Cortex_A76.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Cortex_A55_Cortex_A76.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A55_Cortex_A76.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A55_Cortex_A76.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A55_Cortex_A76.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A55_Cortex_A76.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A55_Cortex_A76.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A55_Cortex_A76.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A55_Cortex_A76.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A55_Cortex_A76.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A55_Cortex_A76.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.hdld0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart2.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart2.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart2.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart3.clk_divider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart3.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart3.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.p1041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.p1041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.p1041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.p1050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.p1050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.p1050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.p1050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.ve_sysregs

Type: `VE_SysRegs`.

FVP_Base_Cortex_A55_Cortex_A76.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

FVP_Base_Cortex_A55_Cortex_A76.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

FVP_Base_Cortex_A55_Cortex_A76.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `VirtioBlockMMIO`.

FVP_Base_Cortex_A55_Cortex_A76.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A55_Cortex_A76.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A55_Cortex_A76.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A55_Cortex_A76.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A55_Cortex_A76.cluster0

ARM Cortex-A55_Cortex-A76 Cluster CT model.

Type: [cluster_ARM_Cortex-A55_Cortex-A76](#).

FVP_Base_Cortex_A55_Cortex_A76.cluster0.DSU.shared_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A55_Cortex_A76.cluster0.subcluster0

ARM Cortex-A55 Cluster CT model.

Type: [Subcluster_ARM_Cortex-A55](#).

FVP_Base_Cortex_A55_Cortex_A76.cluster0.subcluster0.cpu0

ARM Cortex-A55 CT model.

Type: [ARM_Cortex-A55](#).

FVP_Base_Cortex_A55_Cortex_A76.cluster0.subcluster0.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A55_Cortex_A76.cluster0.subcluster0.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A55_Cortex_A76.cluster0.subcluster0.cpu0.l2cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A55_Cortex_A76.cluster0.subcluster1

ARM Cortex-A76 Cluster CT model.

Type: [Subcluster_ARM_Cortex-A76](#).

FVP_Base_Cortex_A55_Cortex_A76.cluster0.subcluster1.cpu0

ARM Cortex-A76 CT model.

Type: [ARM_Cortex-A76](#).

FVP_Base_Cortex_A55_Cortex_A76.cluster0.subcluster1.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A55_Cortex_A76.cluster0.subcluster1.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A55_Cortex_A76.cluster0.subcluster1.cpu0.l2cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A55_Cortex_A76.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A55_Cortex_A76.dapmemlogger

Bus Logger.

Type: [PVBUSLogger](#).

FVP_Base_Cortex_A55_Cortex_A76.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A55_Cortex_A76.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A55_Cortex_A76.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A55_Cortex_A76.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A55_Cortex_A76.pctl.timer_reset.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A55_Cortex_A76.pctl.timer_reset.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.20 FVP_Base_Cortex-A57x1

List of instances in FVP_Base_Cortex-A57x1.

FVP_Base_Cortex-A57x1 instances

FVP_Base_Cortex_A57x1

Base Platform Compute Subsystem for ARMCortexA57x1CT.

Type: `FVP_Base_Cortex_A57x1`.

FVP_Base_Cortex_A57x1.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Cortex_A57x1.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A57x1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A57x1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A57x1.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A57x1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A57x1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A57x1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A57x1.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A57x1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A57x1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A57x1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A57x1.bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1.bp.hdld0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A57x1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A57x1.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A57x1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart2.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart2.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart2.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart3.clk_divider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart3.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart3.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A57x1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A57x1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A57x1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A57x1.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A57x1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A57x1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A57x1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A57x1.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A57x1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A57x1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A57x1.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x1.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A57x1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A57x1.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A57x1.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x1.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x1.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x1.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A57x1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A57x1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A57x1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A57x1.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1.bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1.bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A57x1.bp.ve_sysregs

Type: `VE_SysRegs`.

FVP_Base_Cortex_A57x1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

FVP_Base_Cortex_A57x1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A57x1.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

FVP_Base_Cortex_A57x1.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `VirtioBlockMMIO`.

FVP_Base_Cortex_A57x1.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x1.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A57x1.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x1.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A57x1.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A57x1.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A57x1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1.cluster0

ARM Cortex-A57 Cluster CT model.

Type: [cluster_ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x1.cluster0.cpu0

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x1.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A57x1.cluster0.cpu0.l1dcache

PV Cache.

Type: [pvCache](#).

FVP_Base_Cortex_A57x1.cluster0.cpu0.l1icache

PV Cache.

Type: [pvCache](#).

FVP_Base_Cortex_A57x1.cluster0.l2_cache

PV Cache.

Type: [pvCache](#).

FVP_Base_Cortex_A57x1.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x1.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A57x1.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A57x1.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A57x1.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A57x1.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.21 FVP_Base_Cortex-A57x1-A35x1

List of instances in FVP_Base_Cortex-A57x1-A35x1.

FVP_Base_Cortex-A57x1-A35x1 instances

FVP_Base_Cortex_A57x1_A35x1

Base Platform Compute Subsystem for ARM Cortex A57x1CT and ARM Cortex A35x1CT.

Type: [FVP_Base_Cortex_A57x1_A35x1](#).

FVP_Base_Cortex_A57x1_A35x1.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A57x1_A35x1.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A57x1_A35x1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A57x1_A35x1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A57x1_A35x1.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A57x1_A35x1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A57x1_A35x1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A57x1_A35x1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A57x1_A35x1.bp.audioout

SDL based Audio Output for PLO41_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A57x1_A35x1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A35x1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A35x1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A35x1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A35x1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A35x1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_A57x1_A35x1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x1_A35x1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x1_A35x1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x1_A35x1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x1_A35x1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A57x1_A35x1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLC](#).

FVP_Base_Cortex_A57x1_A35x1.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A35x1.bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A35x1.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x1_A35x1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A57x1_A35x1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A57x1_A35x1.bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A35x1.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A35x1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A57x1_A35x1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x1_A35x1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x1_A35x1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x1_A35x1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A57x1_A35x1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A57x1_A35x1.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A35x1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A35x1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A57x1_A35x1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A35x1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A35x1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A35x1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A57x1_A35x1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A57x1_A35x1.bp.r1_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A35x1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A35x1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A35x1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A35x1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A35x1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x1_A35x1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x1_A35x1.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A57x1_A35x1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A57x1_A35x1.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A35x1.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A35x1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A57x1_A35x1.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A35x1.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x1_A35x1.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x1_A35x1.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x1_A35x1.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x1_A35x1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A57x1_A35x1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A57x1_A35x1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A57x1_A35x1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A57x1_A35x1.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A35x1.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A35x1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A57x1_A35x1.bp.ve_sysregs

Type: [vE_SysRegs](#).

FVP_Base_Cortex_A57x1_A35x1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

FVP_Base_Cortex_A57x1_A35x1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: `VirtioNetMMIO`.

FVP_Base_Cortex_A57x1_A35x1.bp.virtio_net_labeller

Type: `Labeller`.

FVP_Base_Cortex_A57x1_A35x1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

FVP_Base_Cortex_A57x1_A35x1.bp.virtioblockdevice

VirtioBlock device over MMIO transport.

Type: `VirtioBlockMMIO`.

FVP_Base_Cortex_A57x1_A35x1.bp.virtioblockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A57x1_A35x1.bp.virtiop9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A57x1_A35x1.bp.virtiop9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A57x1_A35x1.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A57x1_A35x1.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A57x1_A35x1.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x1_A35x1.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A35x1.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A35x1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A35x1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A35x1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A57x1_A35x1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A35x1.cluster0

ARM Cortex-A57 Cluster CT model.

Type: [Cluster_ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x1_A35x1.cluster0.cpu0

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).**FVP_Base_Cortex_A57x1_A35x1.cluster0.cpu0.dtlb**

TLB - instruction, data or unified.

Type: [Tlbcadi](#).**FVP_Base_Cortex_A57x1_A35x1.cluster0.cpu0.l1dcache**

PV Cache.

Type: [pVCache](#).**FVP_Base_Cortex_A57x1_A35x1.cluster0.cpu0.l1icache**

PV Cache.

Type: [pVCache](#).**FVP_Base_Cortex_A57x1_A35x1.cluster0.l2_cache**

PV Cache.

Type: [pVCache](#).**FVP_Base_Cortex_A57x1_A35x1.cluster0.labeller**Type: [Labeller](#).**FVP_Base_Cortex_A57x1_A35x1.cluster1**

ARM Cortex-A35 Cluster CT model.

Type: [cluster_ARM_Cortex-A35](#).**FVP_Base_Cortex_A57x1_A35x1.cluster1.cpu0**

ARM Cortex-A35 CT model.

Type: [ARM_Cortex-A35](#).**FVP_Base_Cortex_A57x1_A35x1.cluster1.cpu0.dtlb**

TLB - instruction, data or unified.

Type: [Tlbcadi](#).**FVP_Base_Cortex_A57x1_A35x1.cluster1.cpu0.l1dcache**

PV Cache.

Type: [pVCache](#).**FVP_Base_Cortex_A57x1_A35x1.cluster1.cpu0.l1icache**

PV Cache.

Type: [pVCache](#).**FVP_Base_Cortex_A57x1_A35x1.cluster1.l2_cache**

PV Cache.

Type: [pVCache](#).**FVP_Base_Cortex_A57x1_A35x1.cluster1.labeller**Type: [Labeller](#).**FVP_Base_Cortex_A57x1_A35x1.dapmemlogger**

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A57x1_A35x1.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A57x1_A35x1.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A57x1_A35x1.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A57x1_A35x1.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A35x1.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A35x1.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A35x1.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.22 FVP_Base_Cortex-A57x1-A53x1

List of instances in FVP_Base_Cortex-A57x1-A53x1.

FVP_Base_Cortex-A57x1-A53x1 instances

FVP_Base_Cortex_A57x1_A53x1

Base Platform Compute Subsystem for ARMCortexA57x1CT and ARMCortexA53x1CT.

Type: [FVP_Base_Cortex_A57x1_A53x1](#).

FVP_Base_Cortex_A57x1_A53x1.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Cortex_A57x1_A53x1.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A57x1_A53x1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x1_A53x1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x1_A53x1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A57x1_A53x1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A57x1_A53x1.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A57x1_A53x1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x1_A53x1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x1_A53x1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A57x1_A53x1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A57x1_A53x1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A57x1_A53x1.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A57x1_A53x1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A53x1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A53x1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A53x1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A53x1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A53x1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A53x1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A53x1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A53x1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A53x1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A53x1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A53x1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A53x1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A53x1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_A57x1_A53x1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x1_A53x1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x1_A53x1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x1_A53x1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x1_A53x1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A57x1_A53x1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_Base_Cortex_A57x1_A53x1.bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A53x1.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A53x1.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x1_A53x1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A57x1_A53x1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A57x1_A53x1.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A53x1.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A53x1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A57x1_A53x1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x1_A53x1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x1_A53x1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x1_A53x1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A57x1_A53x1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked `PS2Data` signals which can be routed to a `PL050_KMI` component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A57x1_A53x1.bp.ps2keyboard.ps2_clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.ps2keyboard.ps2_clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A53x1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A53x1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A57x1_A53x1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A53x1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A53x1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A53x1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A57x1_A53x1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A57x1_A53x1.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A53x1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A53x1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A53x1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A53x1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A53x1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x1_A53x1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x1_A53x1.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A57x1_A53x1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A57x1_A53x1.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A57x1_A53x1.bp.sp805_wdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A57x1_A53x1.bp.sp805_wdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_Base_Cortex_A57x1_A53x1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

FVP_Base_Cortex_A57x1_A53x1.bp.sp810_sysctrl.clkdiv_clk0

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x1_A53x1.bp.sp810_sysctrl.clkdiv_clk1

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x1_A53x1.bp.sp810_sysctrl.clkdiv_clk2

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x1_A53x1.bp.sp810_sysctrl.clkdiv_clk3

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x1_A53x1.bp.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_Base_Cortex_A57x1_A53x1.bp.terminal_0

Telnet terminal interface.

Type: `TelnetTerminal`.

FVP_Base_Cortex_A57x1_A53x1.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x1_A53x1.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x1_A53x1.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x1_A53x1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A57x1_A53x1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A57x1_A53x1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A57x1_A53x1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A57x1_A53x1.bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A53x1.bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A53x1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A57x1_A53x1.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A57x1_A53x1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A57x1_A53x1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A57x1_A53x1.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x1_A53x1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A57x1_A53x1.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [VirtioBlockMMIO](#).

FVP_Base_Cortex_A57x1_A53x1.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x1_A53x1.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A57x1_A53x1.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x1_A53x1.bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_Base_Cortex_A57x1_A53x1.bp.vis_recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A57x1_A53x1.bp.vis_recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A53x1.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x1_A53x1.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A53x1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x1_A53x1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A53x1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x1_A53x1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A57x1_A53x1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A53x1.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x1_A53x1.cluster0

ARM Cortex-A57 Cluster CT model.

Type: [Cluster_ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x1_A53x1.cluster0.cpu0

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x1_A53x1.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A57x1_A53x1.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x1_A53x1.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x1_A53x1.cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x1_A53x1.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x1_A53x1.cluster1

ARM Cortex-A53 Cluster CT model.

Type: [Cluster_ARM_Cortex-A53](#).

FVP_Base_Cortex_A57x1_A53x1.cluster1.cpu0

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A57x1_A53x1.cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A57x1_A53x1.cluster1.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x1_A53x1.cluster1.cpu0.l1icache

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_A57x1_A53x1.cluster1.l2_cache**

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_A57x1_A53x1.cluster1_labeller**Type: [Labeller](#).**FVP_Base_Cortex_A57x1_A53x1.dapmemlogger**

Bus Logger.

Type: [PVBUSLogger](#).**FVP_Base_Cortex_A57x1_A53x1.elfloader**

ELF loader component.

Type: [ElfLoader](#).**FVP_Base_Cortex_A57x1_A53x1.gic_distributor**

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).**FVP_Base_Cortex_A57x1_A53x1.pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).**FVP_Base_Cortex_A57x1_A53x1.pctl.timer_reset**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).**FVP_Base_Cortex_A57x1_A53x1.pctl.timer_reset.timer**

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).**FVP_Base_Cortex_A57x1_A53x1.pctl.timer_reset.timer.thread**A [SchedulerThread](#) instance represents a co-routine thread in the simulation.Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x1_A53x1.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.23 FVP_Base_Cortex-A57x2

List of instances in FVP_Base_Cortex-A57x2.

FVP_Base_Cortex-A57x2 instances

FVP_Base_Cortex_A57x2

Base Platform Compute Subsystem for ARMCortexA57x2CT.

Type: [FVP_Base_Cortex_A57x2](#).

FVP_Base_Cortex_A57x2.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A57x2.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A57x2.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A57x2.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A57x2.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A57x2.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A57x2.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A57x2.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A57x2.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A57x2.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_A57x2.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x2.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x2.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x2.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x2.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A57x2.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A57x2.bp.hdlcd0.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2.bp.hdlcd0.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x2.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A57x2.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A57x2.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A57x2.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x2.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x2.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A57x2.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A57x2.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A57x2.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A57x2.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A57x2.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A57x2.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x2.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A57x2.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A57x2.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A57x2.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A57x2.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A57x2.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x2.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x2.bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_Base_Cortex_A57x2.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A57x2.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A57x2.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x2.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x2.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x2.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x2.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A57x2.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A57x2.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A57x2.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A57x2.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A57x2.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A57x2.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A57x2.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A57x2.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x2.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A57x2.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A57x2.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A57x2.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A57x2.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A57x2.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A57x2.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A57x2.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x2.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A57x2.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A57x2.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A57x2.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A57x2.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2.cluster0

ARM Cortex-A57 Cluster CT model.

Type: [Cluster_ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x2.cluster0.cpu0

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x2.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A57x2.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x2.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x2.cluster0.cpu1

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x2.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A57x2.cluster0.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x2.cluster0.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x2.cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x2.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x2.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A57x2.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A57x2.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A57x2.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A57x2.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.24 FVP_Base_Cortex-A57x2-A35x4

List of instances in FVP_Base_Cortex-A57x2-A35x4.

FVP_Base_Cortex-A57x2-A35x4 instances

FVP_Base_Cortex_A57x2_A35x4

Base Platform Compute Subsystem for ARMCortexA57x2CT and ARMCortexA35x4CT.

Type: [FVP_Base_Cortex_A57x2_A35x4](#).

FVP_Base_Cortex_A57x2_A35x4.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A57x2_A35x4.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A57x2_A35x4.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A57x2_A35x4.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A57x2_A35x4.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A57x2_A35x4.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A57x2_A35x4.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A57x2_A35x4.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A57x2_A35x4.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A57x2_A35x4.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A35x4.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A35x4.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A35x4.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A35x4.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A35x4.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_A57x2_A35x4.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x2_A35x4.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x2_A35x4.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x2_A35x4.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x2_A35x4.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A57x2_A35x4.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A57x2_A35x4.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A35x4.bp.hd1cd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.hd1cd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A35x4.bp.hd1cd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x2_A35x4.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A57x2_A35x4.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A57x2_A35x4.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A35x4.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A35x4.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A57x2_A35x4.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x2_A35x4.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x2_A35x4.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x2_A35x4.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A57x2_A35x4.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A57x2_A35x4.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A35x4.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A35x4.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A57x2_A35x4.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A35x4.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A35x4.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A35x4.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A57x2_A35x4.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A57x2_A35x4.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A35x4.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A35x4.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A35x4.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A35x4.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A35x4.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x2_A35x4.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x2_A35x4.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A57x2_A35x4.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A57x2_A35x4.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A35x4.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A35x4.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A57x2_A35x4.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A35x4.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x2_A35x4.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x2_A35x4.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x2_A35x4.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x2_A35x4.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A57x2_A35x4.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A57x2_A35x4.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A57x2_A35x4.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A57x2_A35x4.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A35x4.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A35x4.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A35x4.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A57x2_A35x4.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A57x2_A35x4.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A57x2_A35x4.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A57x2_A35x4.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x2_A35x4.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A57x2_A35x4.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A57x2_A35x4.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A57x2_A35x4.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A57x2_A35x4.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A57x2_A35x4.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A57x2_A35x4.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A57x2_A35x4.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x2_A35x4.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A57x2_A35x4.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A57x2_A35x4.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A57x2_A35x4.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A35x4.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A35x4.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A57x2_A35x4.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A35x4.cluster0

ARM Cortex-A57 Cluster CT model.

Type: [Cluster_ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x2_A35x4.cluster0.cpu0

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x2_A35x4.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A57x2_A35x4.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x2_A35x4.cluster0.cpu0.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x2_A35x4.cluster0.cpu1

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x2_A35x4.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A57x2_A35x4.cluster0.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x2_A35x4.cluster0.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x2_A35x4.cluster0.l2_cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x2_A35x4.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x2_A35x4.cluster1

ARM Cortex-A35 Cluster CT model.

Type: [Cluster_ARM_Cortex-A35](#).

FVP_Base_Cortex_A57x2_A35x4.cluster1.cpu0

ARM Cortex-A35 CT model.

Type: [ARM_Cortex-A35](#).

FVP_Base_Cortex_A57x2_A35x4.cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A57x2_A35x4.cluster1.cpu0.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x2_A35x4.cluster1.cpu0.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x2_A35x4.cluster1.cpu1

ARM Cortex-A35 CT model.

Type: [ARM_Cortex-A35](#).

FVP_Base_Cortex_A57x2_A35x4.cluster1.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A57x2_A35x4.cluster1.cpu1.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A57x2_A35x4.cluster1.cpu1.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A57x2_A35x4.cluster1.cpu2

ARM Cortex-A35 CT model.

Type: [ARM_Cortex-A35](#).

FVP_Base_Cortex_A57x2_A35x4.cluster1.cpu2.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A57x2_A35x4.cluster1.cpu2.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A57x2_A35x4.cluster1.cpu2.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A57x2_A35x4.cluster1.cpu3

ARM Cortex-A35 CT model.

Type: [ARM_Cortex-A35](#).

FVP_Base_Cortex_A57x2_A35x4.cluster1.cpu3.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A57x2_A35x4.cluster1.cpu3.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A57x2_A35x4.cluster1.cpu3.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A57x2_A35x4.cluster1.l2_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A57x2_A35x4.cluster1_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x2_A35x4.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A57x2_A35x4.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A57x2_A35x4.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A57x2_A35x4.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A57x2_A35x4.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A35x4.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A35x4.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A35x4.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.25 FVP_Base_Cortex-A57x2-A53x4

List of instances in FVP_Base_Cortex-A57x2-A53x4.

FVP_Base_Cortex-A57x2-A53x4 instances

FVP_Base_Cortex_A57x2_A53x4

Base Platform Compute Subsystem for ARMCortexA57x2CT and ARMCortexA53x4CT.

Type: [FVP_Base_Cortex_A57x2_A53x4](#).

FVP_Base_Cortex_A57x2_A53x4.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Cortex_A57x2_A53x4.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A57x2_A53x4.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x2_A53x4.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x2_A53x4.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A57x2_A53x4.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A57x2_A53x4.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A57x2_A53x4.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x2_A53x4.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x2_A53x4.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A57x2_A53x4.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A57x2_A53x4.bp.ap_refclk

ARM Generic Timer.

Type: `MemoryMappedGenericTimer`.

FVP_Base_Cortex_A57x2_A53x4.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: `AudioOut_SDL`.

FVP_Base_Cortex_A57x2_A53x4.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x2_A53x4.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x2_A53x4.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x2_A53x4.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x2_A53x4.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x2_A53x4.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x2_A53x4.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A53x4.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A53x4.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A53x4.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A53x4.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A53x4.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A53x4.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A53x4.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A57x2_A53x4.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x2_A53x4.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x2_A53x4.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x2_A53x4.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x2_A53x4.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A57x2_A53x4.bp.hd1cd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLC0](#).

FVP_Base_Cortex_A57x2_A53x4.bp.hd1cd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.hd1cd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A53x4.bp.hd1cd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.hd1cd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A53x4.bp.hd1cd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x2_A53x4.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A57x2_A53x4.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A57x2_A53x4.bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A53x4.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A53x4.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A57x2_A53x4.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x2_A53x4.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x2_A53x4.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x2_A53x4.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A57x2_A53x4.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A57x2_A53x4.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A53x4.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A53x4.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A57x2_A53x4.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A53x4.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A53x4.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A53x4.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A57x2_A53x4.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A57x2_A53x4.bp.r1_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A53x4.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A53x4.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A53x4.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A53x4.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A53x4.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x2_A53x4.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x2_A53x4.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A57x2_A53x4.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A57x2_A53x4.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A53x4.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A53x4.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A57x2_A53x4.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A53x4.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A53x4.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A53x4.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A53x4.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A53x4.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x2_A53x4.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x2_A53x4.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x2_A53x4.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x2_A53x4.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A57x2_A53x4.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A57x2_A53x4.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A57x2_A53x4.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A57x2_A53x4.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A53x4.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A53x4.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A57x2_A53x4.bp.ve_sysregs

Type: [vE_SysRegs](#).

FVP_Base_Cortex_A57x2_A53x4.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [vEDCC](#).

FVP_Base_Cortex_A57x2_A53x4.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A57x2_A53x4.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x2_A53x4.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A57x2_A53x4.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [VirtioBlockMMIO](#).

FVP_Base_Cortex_A57x2_A53x4.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x2_A53x4.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A57x2_A53x4.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x2_A53x4.bp.vis

Display window for VE using Visualisation library.

Type: [vEVisualisation](#).

FVP_Base_Cortex_A57x2_A53x4.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A57x2_A53x4.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A53x4.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x2_A53x4.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x2_A53x4.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x2_A53x4.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A53x4.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x2_A53x4.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A57x2_A53x4.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A53x4.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x2_A53x4.cluster0

ARM Cortex-A57 Cluster CT model.

Type: [cluster_ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x2_A53x4.cluster0.cpu0

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x2_A53x4.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A57x2_A53x4.cluster0.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A57x2_A53x4.cluster0.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A57x2_A53x4.cluster0.cpu1

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x2_A53x4.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A57x2_A53x4.cluster0.cpu1.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A57x2_A53x4.cluster0.cpu1.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A57x2_A53x4.cluster0.l2_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A57x2_A53x4.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x2_A53x4.cluster1

ARM Cortex-A53 Cluster CT model.

Type: [cluster_ARM_Cortex-A53](#).

FVP_Base_Cortex_A57x2_A53x4.cluster1.cpu0

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).**FVP_Base_Cortex_A57x2_A53x4.cluster1.cpu0.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A57x2_A53x4.cluster1.cpu0.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x2_A53x4.cluster1.cpu0.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x2_A53x4.cluster1.cpu1

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).**FVP_Base_Cortex_A57x2_A53x4.cluster1.cpu1.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A57x2_A53x4.cluster1.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x2_A53x4.cluster1.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x2_A53x4.cluster1.cpu2

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).**FVP_Base_Cortex_A57x2_A53x4.cluster1.cpu2.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A57x2_A53x4.cluster1.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x2_A53x4.cluster1.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x2_A53x4.cluster1.cpu3

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A57x2_A53x4.cluster1.cpu3.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A57x2_A53x4.cluster1.cpu3.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A57x2_A53x4.cluster1.cpu3.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A57x2_A53x4.cluster1.l2_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A57x2_A53x4.cluster1_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x2_A53x4.dapmemlogger

Bus Logger.

Type: [PVBUSLogger](#).

FVP_Base_Cortex_A57x2_A53x4.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A57x2_A53x4.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A57x2_A53x4.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A57x2_A53x4.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x2_A53x4.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A57x2_A53x4.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A57x2_A53x4.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

13.26 FVP_Base_Cortex-A57x4

List of instances in FVP_Base_Cortex-A57x4.

FVP_Base_Cortex-A57x4 instances

FVP_Base_Cortex_A57x4

Base Platform Compute Subsystem for ARMCortexA57x4CT.

Type: `FVP_Base_Cortex_A57x4`.

FVP_Base_Cortex_A57x4.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Cortex_A57x4.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A57x4.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x4.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x4.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A57x4.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A57x4.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A57x4.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A57x4.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A57x4.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A57x4.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A57x4.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_A57x4.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x4.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x4.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x4.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x4.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A57x4.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A57x4.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x4.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A57x4.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A57x4.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A57x4.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x4.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x4.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A57x4.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A57x4.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A57x4.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A57x4.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A57x4.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A57x4.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x4.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A57x4.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A57x4.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A57x4.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A57x4.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A57x4.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x4.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x4.bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_Base_Cortex_A57x4.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A57x4.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A57x4.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x4.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x4.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x4.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x4.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A57x4.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A57x4.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A57x4.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A57x4.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A57x4.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A57x4.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A57x4.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A57x4.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x4.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A57x4.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A57x4.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A57x4.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A57x4.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A57x4.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A57x4.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A57x4.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x4.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A57x4.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A57x4.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A57x4.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A57x4.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4.cluster0

ARM Cortex-A57 Cluster CT model.

Type: [Cluster_ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x4.cluster0.cpu0

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x4.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A57x4.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x4.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x4.cluster0.cpu1

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x4.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A57x4.cluster0.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x4.cluster0.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x4.cluster0.cpu2

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x4.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A57x4.cluster0.cpu2.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x4.cluster0.cpu2.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x4.cluster0.cpu3

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x4.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A57x4.cluster0.cpu3.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x4.cluster0.cpu3.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x4.cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x4.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x4.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A57x4.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A57x4.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A57x4.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A57x4.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.27 FVP_Base_Cortex-A57x4-A35x4

List of instances in FVP_Base_Cortex-A57x4-A35x4.

FVP_Base_Cortex-A57x4-A35x4 instances

FVP_Base_Cortex_A57x4_A35x4

Base Platform Compute Subsystem for ARMCortexA57x4CT and ARMCortexA35x4CT.

Type: [FVP_Base_Cortex_A57x4_A35x4](#).

FVP_Base_Cortex_A57x4_A35x4.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Cortex_A57x4_A35x4.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A57x4_A35x4.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x4_A35x4.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x4_A35x4.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A57x4_A35x4.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A57x4_A35x4.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A57x4_A35x4.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x4_A35x4.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x4_A35x4.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A57x4_A35x4.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A57x4_A35x4.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A57x4_A35x4.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A57x4_A35x4.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A35x4.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A35x4.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A35x4.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A35x4.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A35x4.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A35x4.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A35x4.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A35x4.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A35x4.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A35x4.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A35x4.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A35x4.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A35x4.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_A57x4_A35x4.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x4_A35x4.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x4_A35x4.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x4_A35x4.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x4_A35x4.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A57x4_A35x4.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_Base_Cortex_A57x4_A35x4.bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A35x4.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A35x4.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x4_A35x4.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A57x4_A35x4.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A57x4_A35x4.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A35x4.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A35x4.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A57x4_A35x4.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x4_A35x4.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x4_A35x4.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x4_A35x4.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A57x4_A35x4.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked `PS2Data` signals which can be routed to a `PL050_KMI` component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A57x4_A35x4.bp.ps2keyboard.ps2_clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.ps2keyboard.ps2_clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A35x4.bp.ps2keyboard.ps2_clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A35x4.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A57x4_A35x4.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A35x4.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A35x4.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A35x4.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A57x4_A35x4.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A57x4_A35x4.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A35x4.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A35x4.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A35x4.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A35x4.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A35x4.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x4_A35x4.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x4_A35x4.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A57x4_A35x4.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A57x4_A35x4.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A57x4_A35x4.bp.sp805_wdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A57x4_A35x4.bp.sp805_wdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_Base_Cortex_A57x4_A35x4.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

FVP_Base_Cortex_A57x4_A35x4.bp.sp810_sysctrl.clkdiv_clk0

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x4_A35x4.bp.sp810_sysctrl.clkdiv_clk1

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x4_A35x4.bp.sp810_sysctrl.clkdiv_clk2

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x4_A35x4.bp.sp810_sysctrl.clkdiv_clk3

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x4_A35x4.bp.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_Base_Cortex_A57x4_A35x4.bp.terminal_0

Telnet terminal interface.

Type: `TelnetTerminal`.

FVP_Base_Cortex_A57x4_A35x4.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x4_A35x4.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x4_A35x4.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x4_A35x4.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A57x4_A35x4.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A57x4_A35x4.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A57x4_A35x4.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A57x4_A35x4.bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A35x4.bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A35x4.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A57x4_A35x4.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A57x4_A35x4.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A57x4_A35x4.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A57x4_A35x4.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x4_A35x4.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A57x4_A35x4.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [VirtioBlockMMIO](#).

FVP_Base_Cortex_A57x4_A35x4.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x4_A35x4.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A57x4_A35x4.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x4_A35x4.bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_Base_Cortex_A57x4_A35x4.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A57x4_A35x4.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A35x4.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A35x4.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A35x4.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A35x4.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A35x4.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A35x4.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A57x4_A35x4.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A35x4.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A35x4.cluster0

ARM Cortex-A57 Cluster CT model.

Type: [Cluster_ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x4_A35x4.cluster0.cpu0

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x4_A35x4.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A57x4_A35x4.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x4_A35x4.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x4_A35x4.cluster0.cpu1

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x4_A35x4.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x4_A35x4.cluster0.cpu2

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x4_A35x4.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: `Tlbcadi`.

FVP_Base_Cortex_A57x4_A35x4.cluster0.cpu2.l1dcache

PV Cache.

Type: `PVCache`.

FVP_Base_Cortex_A57x4_A35x4.cluster0.cpu2.l1icache

PV Cache.

Type: `PVCache`.

FVP_Base_Cortex_A57x4_A35x4.cluster0.cpu3

ARM Cortex-A57 CT model.

Type: `ARM_Cortex-A57`.

FVP_Base_Cortex_A57x4_A35x4.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: `Tlbcadi`.

FVP_Base_Cortex_A57x4_A35x4.cluster0.cpu3.l1dcache

PV Cache.

Type: `PVCache`.

FVP_Base_Cortex_A57x4_A35x4.cluster0.cpu3.l1icache

PV Cache.

Type: `PVCache`.

FVP_Base_Cortex_A57x4_A35x4.cluster0.l2_cache

PV Cache.

Type: `PVCache`.

FVP_Base_Cortex_A57x4_A35x4.cluster0_labeller

Type: `Labeller`.

FVP_Base_Cortex_A57x4_A35x4.cluster1

ARM Cortex-A35 Cluster CT model.

Type: `Cluster_ARM_Cortex-A35`.

FVP_Base_Cortex_A57x4_A35x4.cluster1.cpu0

ARM Cortex-A35 CT model.

Type: `ARM_Cortex-A35`.

FVP_Base_Cortex_A57x4_A35x4.cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: `Tlbcadi`.

FVP_Base_Cortex_A57x4_A35x4.cluster1_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x4_A35x4.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A57x4_A35x4.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A57x4_A35x4.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A57x4_A35x4.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A57x4_A35x4.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A35x4.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A35x4.pctl.timer_reset.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A35x4.pctl.timer_reset.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.28 FVP_Base_Cortex-A57x4-A53x4

List of instances in FVP_Base_Cortex-A57x4-A53x4.

FVP_Base_Cortex-A57x4-A53x4 instances

FVP_Base_Cortex_A57x4_A53x4

Base Platform Compute Subsystem for ARM Cortex A57x4CT and ARM Cortex A53x4CT.

Type: `FVP_Base_Cortex_A57x4_A53x4`.

FVP_Base_Cortex_A57x4_A53x4.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Cortex_A57x4_A53x4.bp.Timer_0_1

ARM Dual-Timer Module (SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A57x4_A53x4.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x4_A53x4.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x4_A53x4.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A57x4_A53x4.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A57x4_A53x4.bp.Timer_2_3

ARM Dual-Timer Module (SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A57x4_A53x4.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A57x4_A53x4.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A57x4_A53x4.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A57x4_A53x4.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A57x4_A53x4.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A57x4_A53x4.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A53x4.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A53x4.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A53x4.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A53x4.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A53x4.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A57x4_A53x4.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x4_A53x4.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x4_A53x4.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x4_A53x4.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x4_A53x4.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A57x4_A53x4.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A57x4_A53x4.bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A53x4.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A53x4.bp.hd1cd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x4_A53x4.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A57x4_A53x4.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A57x4_A53x4.bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A53x4.bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A53x4.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A57x4_A53x4.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x4_A53x4.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x4_A53x4.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart2.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart2.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart2.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart3.clk_divider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart3.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart3.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x4_A53x4.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A57x4_A53x4.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A57x4_A53x4.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A53x4.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A53x4.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A57x4_A53x4.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A53x4.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A53x4.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A53x4.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A57x4_A53x4.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A57x4_A53x4.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A53x4.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A53x4.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A53x4.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A53x4.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A53x4.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A57x4_A53x4.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A57x4_A53x4.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A57x4_A53x4.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A57x4_A53x4.bp.sp805_wdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A53x4.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A53x4.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A57x4_A53x4.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A53x4.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x4_A53x4.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x4_A53x4.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x4_A53x4.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A57x4_A53x4.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A57x4_A53x4.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A57x4_A53x4.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A57x4_A53x4.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A57x4_A53x4.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A53x4.bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A53x4.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A57x4_A53x4.bp.ve_sysregs

Type: `VE_SysRegs`.

FVP_Base_Cortex_A57x4_A53x4.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

FVP_Base_Cortex_A57x4_A53x4.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A57x4_A53x4.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x4_A53x4.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

FVP_Base_Cortex_A57x4_A53x4.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `VirtioBlockMMIO`.

FVP_Base_Cortex_A57x4_A53x4.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x4_A53x4.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A57x4_A53x4.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x4_A53x4.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A57x4_A53x4.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A57x4_A53x4.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A53x4.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A53x4.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A57x4_A53x4.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A57x4_A53x4.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A57x4_A53x4.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A57x4_A53x4.cluster0

ARM Cortex-A57 Cluster CT model.

Type: [Cluster_ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x4_A53x4.cluster0.cpu0

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x4_A53x4.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A57x4_A53x4.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x4_A53x4.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x4_A53x4.cluster0.cpu1

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x4_A53x4.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A57x4_A53x4.cluster0.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x4_A53x4.cluster0.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x4_A53x4.cluster0.cpu2

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x4_A53x4.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A57x4_A53x4.cluster0.cpu2.l1dcache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A57x4_A53x4.cluster0.cpu2.l1icache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A57x4_A53x4.cluster0.cpu3

ARM Cortex-A57 CT model.

Type: [ARM_Cortex-A57](#).

FVP_Base_Cortex_A57x4_A53x4.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A57x4_A53x4.cluster0.cpu3.l1dcache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A57x4_A53x4.cluster0.cpu3.l1icache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A57x4_A53x4.cluster0.l2_cache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A57x4_A53x4.cluster0.labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x4_A53x4.cluster1

ARM Cortex-A53 Cluster CT model.

Type: cluster_ARM_Cortex-A53.

FVP_Base_Cortex_A57x4_A53x4.cluster1.cpu0

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A57x4_A53x4.cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A57x4_A53x4.cluster1.cpu0.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x4_A53x4.cluster1.cpu0.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x4_A53x4.cluster1.cpu1

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A57x4_A53x4.cluster1.cpu1.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A57x4_A53x4.cluster1.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x4_A53x4.cluster1.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x4_A53x4.cluster1.cpu2

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A57x4_A53x4.cluster1.cpu2.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A57x4_A53x4.cluster1.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x4_A53x4.cluster1.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x4_A53x4.cluster1.cpu3

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A57x4_A53x4.cluster1.cpu3.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A57x4_A53x4.cluster1.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x4_A53x4.cluster1.cpu3.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A57x4_A53x4.cluster1.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A57x4_A53x4.cluster1_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A57x4_A53x4.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A57x4_A53x4.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A57x4_A53x4.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A57x4_A53x4.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A57x4_A53x4.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A57x4_A53x4.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A57x4_A53x4.pctl.timer_reset.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A57x4_A53x4.pctl.timer_reset.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.29 FVP_Base_Cortex-A65

List of instances in FVP_Base_Cortex-A65.

FVP_Base_Cortex-A65 instances

FVP_Base_Cortex_A65

Base Platform Compute Subsystem for ARMCortexA65CT.

Type: `FVP_Base_Cortex_A65`.

FVP_Base_Cortex_A65.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Cortex_A65.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A65.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A65.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A65.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A65.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A65.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A65.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A65.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A65.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A65.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A65.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A65.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A65.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A65.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A65.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A65.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A65.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A65.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A65.bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65.bp.hdclcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A65.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A65.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A65.bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65.bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65.bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65.bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A65.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A65.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A65.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A65.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A65.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A65.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A65.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A65.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A65.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A65.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A65.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A65.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A65.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A65.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A65.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A65.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A65.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A65.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A65.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A65.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A65.bp.sm5c_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A65.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A65.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A65.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A65.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A65.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A65.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A65.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A65.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A65.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A65.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A65.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65.bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65.bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A65.bp.ve_sysregs

Type: `VE_SysRegs`.

FVP_Base_Cortex_A65.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

FVP_Base_Cortex_A65.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A65.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A65.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

FVP_Base_Cortex_A65.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `VirtioBlockMMIO`.

FVP_Base_Cortex_A65.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A65.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A65.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A65.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A65.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A65.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A65.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65.cluster0

ARM Cortex-A65 Cluster CT model.

Type: [cluster_ARM_Cortex-A65](#).

FVP_Base_Cortex_A65.cluster0.DSU.shared_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A65.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [Tlbcadi](#).

FVP_Base_Cortex_A65.cluster0.cpu0.thread0

ARM Cortex-A65 CT model.

Type: [ARM_Cortex-A65](#).

FVP_Base_Cortex_A65.cluster0.cpu0.thread1

ARM Cortex-A65 CT model.

Type: [ARM_Cortex-A65](#).

FVP_Base_Cortex_A65.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [Tlbcadi](#).

FVP_Base_Cortex_A65.cluster0.cpu1.thread0

ARM Cortex-A65 CT model.

Type: [ARM_Cortex-A65](#).

FVP_Base_Cortex_A65.cluster0.cpu1.thread1

ARM Cortex-A65 CT model.

Type: [ARM_Cortex-A65](#).

FVP_Base_Cortex_A65.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: [Tlbcadi](#).

FVP_Base_Cortex_A65.cluster0.cpu2.thread0

ARM Cortex-A65 CT model.

Type: [ARM_Cortex-A65](#).

FVP_Base_Cortex_A65.cluster0.cpu2.thread1

ARM Cortex-A65 CT model.

Type: [ARM_Cortex-A65](#).

FVP_Base_Cortex_A65.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A65.cluster0.cpu3.thread0

ARM Cortex-A65 CT model.

Type: [ARM_Cortex-A65](#).

FVP_Base_Cortex_A65.cluster0.cpu3.thread1

ARM Cortex-A65 CT model.

Type: [ARM_Cortex-A65](#).

FVP_Base_Cortex_A65.cluster0.cpu4.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A65.cluster0.cpu4.thread0

ARM Cortex-A65 CT model.

Type: [ARM_Cortex-A65](#).

FVP_Base_Cortex_A65.cluster0.cpu4.thread1

ARM Cortex-A65 CT model.

Type: [ARM_Cortex-A65](#).

FVP_Base_Cortex_A65.cluster0.cpu5.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A65.cluster0.cpu5.thread0

ARM Cortex-A65 CT model.

Type: [ARM_Cortex-A65](#).

FVP_Base_Cortex_A65.cluster0.cpu5.thread1

ARM Cortex-A65 CT model.

Type: [ARM_Cortex-A65](#).

FVP_Base_Cortex_A65.cluster0.cpu6.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A65.cluster0.cpu6.thread0

ARM Cortex-A65 CT model.

Type: [ARM_Cortex-A65](#).

FVP_Base_Cortex_A65.cluster0.cpu6.thread1

ARM Cortex-A65 CT model.

Type: [ARM_Cortex-A65](#).

FVP_Base_Cortex_A65.cluster0.cpu7.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A65.cluster0.cpu7.thread0

ARM Cortex-A65 CT model.

Type: [ARM_Cortex-A65](#).

FVP_Base_Cortex_A65.cluster0.cpu7.thread1

ARM Cortex-A65 CT model.

Type: [ARM_Cortex-A65](#).

FVP_Base_Cortex_A65.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A65.dapmemlogger

Bus Logger.

Type: [PVBUSLogger](#).

FVP_Base_Cortex_A65.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A65.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A65.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A65.pctl.timer_reset

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65.pctl.timer_reset.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65.pctl.timer_reset.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.30 FVP_Base_Cortex-A65AE

List of instances in FVP_Base_Cortex-A65AE.

FVP_Base_Cortex-A65AE instances

FVP_Base_Cortex_A65AE

Base Platform Compute Subsystem for ARMCortexA65AECT.

Type: [FVP_Base_Cortex_A65AE](#).

FVP_Base_Cortex_A65AE.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A65AE.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A65AE.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A65AE.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A65AE.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A65AE.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A65AE.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A65AE.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A65AE.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A65AE.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A65AE.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A65AE.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A65AE.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A65AE.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A65AE.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A65AE.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A65AE.bp.hdlcd0.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE.bp.hdlcd0.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A65AE.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A65AE.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A65AE.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A65AE.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A65AE.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A65AE.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A65AE.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A65AE.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A65AE.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A65AE.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A65AE.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A65AE.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A65AE.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A65AE.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A65AE.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A65AE.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A65AE.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A65AE.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A65AE.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A65AE.bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_Base_Cortex_A65AE.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A65AE.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A65AE.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A65AE.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A65AE.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A65AE.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A65AE.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A65AE.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A65AE.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A65AE.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A65AE.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A65AE.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A65AE.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A65AE.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A65AE.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A65AE.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A65AE.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A65AE.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A65AE.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A65AE.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A65AE.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A65AE.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A65AE.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A65AE.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A65AE.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A65AE.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A65AE.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A65AE.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE.cluster0

ARM Cortex-A65AE Cluster CT model.

Type: [Cluster_ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE.cluster0.DSU.shared_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A65AE.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A65AE.cluster0.cpu0.thread0

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE.cluster0.cpu0.thread1

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A65AE.cluster0.cpu1.thread0

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE.cluster0.cpu1.thread1

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A65AE.cluster0.cpu2.thread0

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE.cluster0.cpu2.thread1

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A65AE.cluster0.cpu3.thread0

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE.cluster0.cpu3.thread1

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE.cluster0.cpu4.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A65AE.cluster0.cpu4.thread0

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE.cluster0.cpu4.thread1

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE.cluster0.cpu5.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A65AE.cluster0.cpu5.thread0

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE.cluster0.cpu5.thread1

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE.cluster0.cpu6.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A65AE.cluster0.cpu6.thread0

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE.cluster0.cpu6.thread1

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE.cluster0.cpu7.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A65AE.cluster0.cpu7.thread0

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE.cluster0.cpu7.thread1

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A65AE.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A65AE.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A65AE.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A65AE.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A65AE.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.31 FVP_Base_Cortex-A65AE+Cortex-A76AE

List of instances in FVP_Base_Cortex-A65AE+Cortex-A76AE.

FVP_Base_Cortex-A65AE+Cortex-A76AE instances

FVP_Base_Cortex_A65AE_Cortex_A76AE

Base Platform Compute Subsystem for ARMCortexA65AECT_CortexA76AECT.

Type: [FVP_Base_Cortex_A65AE_Cortex_A76AE](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `virtioEntropyMMIO`.

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.virtioBlockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.cluster0

ARM Cortex-A65AE_Cortex-A76AE Cluster CT model.

Type: [Cluster_ARM_Cortex-A65AE_Cortex-A76AE](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.cluster0.DSU.shared_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.cluster0.subcluster0

ARM Cortex-A65AE Cluster CT model.

Type: [Subcluster_ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.cluster0.subcluster0.cpu0.thread0

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.cluster0.subcluster0.cpu0.thread1

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.cluster0.subcluster0.cpu1.thread0

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.cluster0.subcluster0.cpu1.thread1

ARM Cortex-A65AE CT model.

Type: [ARM_Cortex-A65AE](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.cluster0.subcluster1

ARM Cortex-A76AE Cluster CT model.

Type: [Subcluster_ARM_Cortex-A76AE](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.cluster0.subcluster1.cpu0

ARM Cortex-A76AE CT model.

Type: [ARM_Cortex-A76AE](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.cluster0.subcluster1.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.cluster0.subcluster1.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.cluster0.subcluster1.cpu0.l2cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.cluster0.subcluster1.cpu1

ARM Cortex-A76AE CT model.

Type: [ARM_Cortex-A76AE](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.cluster0.subcluster1.cpu1.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.cluster0.subcluster1.cpu1.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.cluster0.subcluster1.cpu1.l2cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A65AE_Cortex_A76AE.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.32 FVP_Base_Cortex-A710

List of instances in FVP_Base_Cortex-A710.

FVP_Base_Cortex-A710 instances

FVP_Base_Cortex_A710

Base Platform Compute Subsystem for ARMCortexA710CT.

Type: [FVP_Base_Cortex_A710](#).

FVP_Base_Cortex_A710.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A710.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A710.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A710.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A710.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A710.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A710.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A710.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A710.bp.audioout

SDL based Audio Output for PLO41_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A710.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A710.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A710.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A710.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A710.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A710.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A710.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A710.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A710.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A710.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A710.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A710.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLC0](#).

FVP_Base_Cortex_A710.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A710.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A710.bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A710.bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A710.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A710.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A710.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A710.bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A710.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A710.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A710.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A710.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A710.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A710.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A710.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A710.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A710.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A710.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A710.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A710.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A710.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A710.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A710.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A710.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A710.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A710.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A710.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A710.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A710.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A710.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A710.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A710.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A710.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A710.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A710.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A710.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A710.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A710.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A710.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A710.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A710.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A710.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A710.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A710.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A710.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A710.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A710.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A710.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A710.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A710.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A710.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A710.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A710.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A710.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A710.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A710.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A710.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A710.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A710.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A710.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A710.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A710.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A710.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A710.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A710.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A710.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A710.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A710.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A710.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A710.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A710.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A710.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A710.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A710.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A710.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A710.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A710.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A710.bp.sp805_wdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A710.bp.sp805_wdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A710.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A710.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A710.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A710.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A710.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A710.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A710.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A710.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A710.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A710.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A710.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A710.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A710.bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A710.bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A710.bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A710.bp.trusted_watchdog.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A710.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A710.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A710.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A710.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A710.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A710.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A710.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [VirtioBlockMMIO](#).

FVP_Base_Cortex_A710.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A710.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A710.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A710.bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_Base_Cortex_A710.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A710.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A710.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A710.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A710.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A710.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A710.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A710.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A710.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A710.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A710.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A710.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A710.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A710.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex-A715 instances

FVP_Base_Cortex_A715

Base Platform Compute Subsystem for ARMCortexA715CT.

Type: [FVP_Base_Cortex_A715](#).

FVP_Base_Cortex_A715.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A715.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A715.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A715.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A715.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A715.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A715.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A715.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A715.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A715.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A715.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A715.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A715.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A715.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A715.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A715.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A715.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A715.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A715.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A715.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A715.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_Base_Cortex_A715.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A715.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A715.bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A715.bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A715.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A715.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A715.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A715.bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A715.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A715.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A715.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A715.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A715.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A715.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A715.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A715.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A715.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A715.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A715.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A715.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A715.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A715.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A715.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A715.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A715.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A715.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A715.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A715.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A715.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A715.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A715.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A715.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A715.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A715.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A715.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A715.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A715.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A715.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A715.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A715.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A715.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A715.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A715.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A715.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A715.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A715.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A715.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A715.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A715.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A715.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A715.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A715.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A715.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A715.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A715.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A715.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A715.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A715.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A715.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A715.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A715.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A715.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A715.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A715.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A715.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A715.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A715.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A715.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A715.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A715.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A715.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A715.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A715.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A715.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A715.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A715.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A715.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A715.bp.sp805_wdog.clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A715.bp.sp805_wdog.clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A715.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A715.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A715.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A715.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A715.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A715.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A715.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A715.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A715.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A715.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A715.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A715.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A715.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A715.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A715.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A715.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A715.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A715.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A715.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A715.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A715.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A715.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A715.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [VirtioBlockMMIO](#).

FVP_Base_Cortex_A715.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A715.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A715.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A715.bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_Base_Cortex_A715.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A715.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A715.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A715.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A715.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A715.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A715.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A715.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A715.cluster0

ARM Cortex-A715 Cluster CT model.

Type: `cluster_ARM_Cortex-A715`.

FVP_Base_Cortex_A715.cluster0.DSU.shared_cache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A715.cluster0.cpu0

ARM Cortex-A715 CT model.

Type: [ARM_Cortex-A715](#).

FVP_Base_Cortex_A715.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

FVP_Base_Cortex_A715.cluster0.cpu0.l1dcache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A715.cluster0.cpu0.l1icache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A715.cluster0.cpu0.l2cache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A715.cluster0.cpu1

ARM Cortex-A715 CT model.

Type: [ARM_Cortex-A715](#).

FVP_Base_Cortex_A715.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

FVP_Base_Cortex_A715.cluster0.cpu1.l1dcache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A715.cluster0.cpu1.l1icache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A715.cluster0.cpu1.l2cache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A715.cluster0.cpu10

ARM Cortex-A715 CT model.

Type: [ARM_Cortex-A715](#).

FVP_Base_Cortex_A715.cluster0.cpu10.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A715.cluster0.cpu10.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A715.cluster0.cpu10.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A715.cluster0.cpu10.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A715.cluster0.cpu11

ARM Cortex-A715 CT model.

Type: [ARM_Cortex-A715](#).**FVP_Base_Cortex_A715.cluster0.cpu11.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A715.cluster0.cpu11.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A715.cluster0.cpu11.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A715.cluster0.cpu11.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A715.cluster0.cpu2

ARM Cortex-A715 CT model.

Type: [ARM_Cortex-A715](#).**FVP_Base_Cortex_A715.cluster0.cpu2.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A715.cluster0.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A715.cluster0.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A715.cluster0.cpu2.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A715.cluster0.cpu3

ARM Cortex-A715 CT model.

Type: [ARM_Cortex-A715](#).**FVP_Base_Cortex_A715.cluster0.cpu3.dtlb**

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A715.cluster0.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A715.cluster0.cpu3.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A715.cluster0.cpu3.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A715.cluster0.cpu4

ARM Cortex-A715 CT model.

Type: [ARM_Cortex-A715](#).**FVP_Base_Cortex_A715.cluster0.cpu4.dtlb**

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A715.cluster0.cpu4.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A715.cluster0.cpu4.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A715.cluster0.cpu4.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A715.cluster0.cpu5

ARM Cortex-A715 CT model.

Type: [ARM_Cortex-A715](#).**FVP_Base_Cortex_A715.cluster0.cpu5.dtlb**

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A715.cluster0.cpu5.l1dcache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A715.cluster0.cpu5.l1icache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A715.cluster0.cpu5.l2cache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A715.cluster0.cpu6

ARM Cortex-A715 CT model.

Type: [ARM_Cortex-A715](#).**FVP_Base_Cortex_A715.cluster0.cpu6.dtlb**

TLB - instruction, data or unified.

Type: tlbcadi.

FVP_Base_Cortex_A715.cluster0.cpu6.l1dcache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A715.cluster0.cpu6.l1icache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A715.cluster0.cpu6.l2cache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A715.cluster0.cpu7

ARM Cortex-A715 CT model.

Type: [ARM_Cortex-A715](#).**FVP_Base_Cortex_A715.cluster0.cpu7.dtlb**

TLB - instruction, data or unified.

Type: tlbcadi.

FVP_Base_Cortex_A715.cluster0.cpu7.l1dcache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A715.cluster0.cpu7.l1icache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A715.cluster0.cpu7.l2cache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A715.cluster0.cpu8

ARM Cortex-A715 CT model.

Type: [ARM_Cortex-A715](#).

FVP_Base_Cortex_A715.cluster0.cpu8.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A715.cluster0.cpu8.l1dcache

PV Cache.

Type: [pvCache](#).

FVP_Base_Cortex_A715.cluster0.cpu8.l1icache

PV Cache.

Type: [pvCache](#).

FVP_Base_Cortex_A715.cluster0.cpu8.l2cache

PV Cache.

Type: [pvCache](#).

FVP_Base_Cortex_A715.cluster0.cpu9

ARM Cortex-A715 CT model.

Type: [ARM_Cortex-A715](#).

FVP_Base_Cortex_A715.cluster0.cpu9.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A715.cluster0.cpu9.l1dcache

PV Cache.

Type: [pvCache](#).

FVP_Base_Cortex_A715.cluster0.cpu9.l1icache

PV Cache.

Type: [pvCache](#).

FVP_Base_Cortex_A715.cluster0.cpu9.l2cache

PV Cache.

Type: [pvCache](#).

FVP_Base_Cortex_A715.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A715.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A715.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A715.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A715.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A715.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A715.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A715.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A715.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.34 FVP_Base_Cortex-A720

List of instances in FVP_Base_Cortex-A720.

FVP_Base_Cortex-A720 instances

FVP_Base_Cortex_A720

Base Platform Compute Subsystem for ARMCortexA720CT.

Type: [FVP_Base_Cortex_A720](#).

FVP_Base_Cortex_A720.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A720.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A720.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A720.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A720.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A720.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A720.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A720.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A720.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A720.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A720.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A720.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A720.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A720.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A720.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A720.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A720.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A720.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A720.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A720.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A720.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_Base_Cortex_A720.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A720.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A720.bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A720.bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A720.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A720.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A720.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A720.bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A720.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A720.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A720.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A720.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A720.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A720.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A720.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A720.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A720.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A720.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A720.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A720.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A720.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A720.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A720.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A720.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A720.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A720.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A720.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A720.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A720.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A720.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A720.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A720.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A720.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A720.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A720.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A720.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A720.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A720.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A720.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A720.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A720.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A720.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A720.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A720.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A720.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A720.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A720.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A720.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A720.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A720.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A720.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A720.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A720.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A720.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A720.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A720.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A720.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A720.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A720.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A720.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A720.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A720.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A720.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A720.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A720.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A720.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A720.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A720.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A720.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A720.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A720.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A720.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A720.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A720.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A720.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A720.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A720.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A720.bp.sp805_wdog.clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A720.bp.sp805_wdog.clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A720.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A720.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A720.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A720.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A720.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A720.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A720.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A720.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A720.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A720.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A720.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A720.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A720.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A720.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A720.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A720.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A720.bp.tzc_400

TrustZone Address Space Controller.

Type: [Tzc_400](#).

FVP_Base_Cortex_A720.bp.ve_sysregs

Type: [ve_SysRegs](#).

FVP_Base_Cortex_A720.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [vedcc](#).

FVP_Base_Cortex_A720.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A720.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A720.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A720.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [VirtioBlockMMIO](#).

FVP_Base_Cortex_A720.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A720.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A720.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A720.bp.vis

Display window for VE using Visualisation library.

Type: [veVisualisation](#).

FVP_Base_Cortex_A720.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A720.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A720.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A720.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A720.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A720.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A720.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A720.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A720.cluster0

ARM Cortex-A720 Cluster CT model.

Type: `Cluster_ARM_Cortex-A720`.**FVP_Base_Cortex_A720.cluster0.DSU.shared_cache**

PV Cache.

Type: `pVCache`.**FVP_Base_Cortex_A720.cluster0.cpu0**

FVP_Base_Cortex_A720.cluster0.cpu12

ARM Cortex-A720 CT model.

Type: [ARM_Cortex-A720](#).**FVP_Base_Cortex_A720.cluster0.cpu12.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A720.cluster0.cpu12.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu12.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu12.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu13

ARM Cortex-A720 CT model.

Type: [ARM_Cortex-A720](#).**FVP_Base_Cortex_A720.cluster0.cpu13.dtlb**

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A720.cluster0.cpu13.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu13.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu13.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu2

ARM Cortex-A720 CT model.

Type: [ARM_Cortex-A720](#).**FVP_Base_Cortex_A720.cluster0.cpu2.dtlb**

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A720.cluster0.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu2.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu3

ARM Cortex-A720 CT model.

Type: [ARM_Cortex-A720](#).**FVP_Base_Cortex_A720.cluster0.cpu3.dtlb**

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_A720.cluster0.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu3.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu3.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu4

ARM Cortex-A720 CT model.

Type: [ARM_Cortex-A720](#).

FVP_Base_Cortex_A720.cluster0.cpu4.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A720.cluster0.cpu4.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu4.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu4.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu5

ARM Cortex-A720 CT model.

Type: [ARM_Cortex-A720](#).

FVP_Base_Cortex_A720.cluster0.cpu5.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A720.cluster0.cpu5.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu5.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu5.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu6

ARM Cortex-A720 CT model.

Type: [ARM_Cortex-A720](#).**FVP_Base_Cortex_A720.cluster0.cpu6.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A720.cluster0.cpu6.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu6.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu6.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu7

ARM Cortex-A720 CT model.

Type: [ARM_Cortex-A720](#).**FVP_Base_Cortex_A720.cluster0.cpu7.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A720.cluster0.cpu7.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu7.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu7.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu8

ARM Cortex-A720 CT model.

Type: [ARM_Cortex-A720](#).**FVP_Base_Cortex_A720.cluster0.cpu8.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A720.cluster0.cpu8.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A720.cluster0.cpu8.l1icache

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_A720.cluster0.cpu8.l2cache**

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_A720.cluster0.cpu9**

ARM Cortex-A720 CT model.

Type: [ARM_Cortex-A720](#).**FVP_Base_Cortex_A720.cluster0.cpu9.dtlb**

TLB - instruction, data or unified.

Type: [TlbCadi](#).**FVP_Base_Cortex_A720.cluster0.cpu9.l1dcache**

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_A720.cluster0.cpu9.l1icache**

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_A720.cluster0.cpu9.l2cache**

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_A720.cluster0_labeller**Type: [Labeller](#).**FVP_Base_Cortex_A720.dapmemlogger**

Bus Logger.

Type: [PVBusLogger](#).**FVP_Base_Cortex_A720.elfloader**

ELF loader component.

Type: [ElfLoader](#).**FVP_Base_Cortex_A720.gic_distributor**

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).**FVP_Base_Cortex_A720.pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).**FVP_Base_Cortex_A720.pctl.timer_reset**

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A720.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A720.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A720.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.35 FVP_Base_Cortex-A72x1

List of instances in FVP_Base_Cortex-A72x1.

FVP_Base_Cortex-A72x1 instances

FVP_Base_Cortex_A72x1

Base Platform Compute Subsystem for ARM Cortex-A72x1CT.

Type: [FVP_Base_Cortex_A72x1](#).

FVP_Base_Cortex_A72x1.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A72x1.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A72x1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A72x1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A72x1.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A72x1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A72x1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A72x1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A72x1.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A72x1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A72x1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A72x1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A72x1.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A72x1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A72x1.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A72x1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart3

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A72x1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A72x1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A72x1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A72x1.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A72x1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A72x1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A72x1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A72x1.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A72x1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A72x1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A72x1.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x1.bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_Base_Cortex_A72x1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A72x1.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A72x1.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x1.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x1.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x1.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A72x1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A72x1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A72x1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A72x1.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A72x1.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A72x1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A72x1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A72x1.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `virtioEntropyMMIO`.

FVP_Base_Cortex_A72x1.bp.virtioBlockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A72x1.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A72x1.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A72x1.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A72x1.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A72x1.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A72x1.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A72x1.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A72x1.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A72x1.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A72x1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1.cluster0

ARM Cortex-A72 Cluster CT model.

Type: [Cluster_ARM_Cortex-A72](#).

FVP_Base_Cortex_A72x1.cluster0.cpu0

ARM Cortex-A72 CT model.

Type: [ARM_Cortex-A72](#).

FVP_Base_Cortex_A72x1.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A72x1.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A72x1.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A72x1.cluster0.l2_cache

PV Cache.

Type: `PVCache`.

FVP_Base_Cortex_A72x1.cluster0_labeller

Type: `Labeller`.

FVP_Base_Cortex_A72x1.dapmemlogger

Bus Logger.

Type: `PVBusLogger`.

FVP_Base_Cortex_A72x1.elfloader

ELF loader component.

Type: `ElfLoader`.

FVP_Base_Cortex_A72x1.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: `GIC_IRI`.

FVP_Base_Cortex_A72x1.pctl

Base Platforms Power Controller.

Type: `Base_PowerController`.

FVP_Base_Cortex_A72x1.pctl.timer_reset

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A72x1.pctl.timer_reset.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A72x1.pctl.timer_reset.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A72x1.pctl.timer_reset.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

13.36 FVP_Base_Cortex-A72x1-A53x1

List of instances in FVP_Base_Cortex-A72x1-A53x1.

FVP_Base_Cortex-A72x1-A53x1 instances

FVP_Base_Cortex_A72x1_A53x1

Base Platform Compute Subsystem for ARM Cortex A72x1CT and ARM Cortex A53x1CT.

Type: `FVP_Base_Cortex_A72x1_A53x1`.

FVP_Base_Cortex_A72x1_A53x1.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Cortex_A72x1_A53x1.bp.Timer_0_1

ARM Dual-Timer Module (SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A72x1_A53x1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A72x1_A53x1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A72x1_A53x1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A72x1_A53x1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A72x1_A53x1.bp.Timer_2_3

ARM Dual-Timer Module (SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A72x1_A53x1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A72x1_A53x1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A72x1_A53x1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A72x1_A53x1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A72x1_A53x1.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A72x1_A53x1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1_A53x1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1_A53x1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1_A53x1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1_A53x1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1_A53x1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A72x1_A53x1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x1_A53x1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x1_A53x1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x1_A53x1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x1_A53x1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A72x1_A53x1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A72x1_A53x1.bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1_A53x1.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1_A53x1.bp.hd1cd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x1_A53x1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A72x1_A53x1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A72x1_A53x1.bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1_A53x1.bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1_A53x1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A72x1_A53x1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x1_A53x1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x1_A53x1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x1_A53x1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A72x1_A53x1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A72x1_A53x1.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1_A53x1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1_A53x1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A72x1_A53x1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1_A53x1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1_A53x1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1_A53x1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A72x1_A53x1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A72x1_A53x1.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1_A53x1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1_A53x1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1_A53x1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1_A53x1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1_A53x1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x1_A53x1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x1_A53x1.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A72x1_A53x1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A72x1_A53x1.bp.sp805_wdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1_A53x1.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1_A53x1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A72x1_A53x1.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1_A53x1.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x1_A53x1.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x1_A53x1.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x1_A53x1.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x1_A53x1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A72x1_A53x1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A72x1_A53x1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A72x1_A53x1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A72x1_A53x1.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1_A53x1.bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1_A53x1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A72x1_A53x1.bp.ve_sysregs

Type: `VE_SysRegs`.

FVP_Base_Cortex_A72x1_A53x1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

FVP_Base_Cortex_A72x1_A53x1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A72x1_A53x1.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x1_A53x1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

FVP_Base_Cortex_A72x1_A53x1.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `VirtioBlockMMIO`.

FVP_Base_Cortex_A72x1_A53x1.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x1_A53x1.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A72x1_A53x1.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x1_A53x1.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A72x1_A53x1.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A72x1_A53x1.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1_A53x1.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1_A53x1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x1_A53x1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x1_A53x1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A72x1_A53x1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x1_A53x1.cluster0

ARM Cortex-A72 Cluster CT model.

Type: [Cluster_ARM_Cortex-A72](#).

FVP_Base_Cortex_A72x1_A53x1.cluster0.cpu0

ARM Cortex-A72 CT model.

Type: [ARM_Cortex-A72](#).

FVP_Base_Cortex_A72x1_A53x1.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A72x1_A53x1.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A72x1_A53x1.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A72x1_A53x1.cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A72x1_A53x1.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x1_A53x1.cluster1

ARM Cortex-A53 Cluster CT model.

Type: [Cluster_ARM_Cortex-A53](#).

FVP_Base_Cortex_A72x1_A53x1.cluster1.cpu0

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A72x1_A53x1.cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A72x1_A53x1.cluster1.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A72x1_A53x1.cluster1.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A72x1_A53x1.cluster1.l2_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A72x1_A53x1.cluster1.labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x1_A53x1.dapmemlogger

Bus Logger.

Type: [PVBUSLogger](#).

FVP_Base_Cortex_A72x1_A53x1.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A72x1_A53x1.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A72x1_A53x1.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A72x1_A53x1.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x1_A53x1.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x1_A53x1.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x1_A53x1.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.37 FVP_Base_Cortex-A72x2

List of instances in FVP_Base_Cortex-A72x2.

FVP_Base_Cortex-A72x2 instances

FVP_Base_Cortex_A72x2

Base Platform Compute Subsystem for ARMCortexA72x2CT.

Type: [FVP_Base_Cortex_A72x2](#).

FVP_Base_Cortex_A72x2.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A72x2.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A72x2.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A72x2.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A72x2.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A72x2.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A72x2.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A72x2.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A72x2.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A72x2.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_A72x2.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x2.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x2.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x2.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x2.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A72x2.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A72x2.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x2.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A72x2.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A72x2.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A72x2.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x2.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x2.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A72x2.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A72x2.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A72x2.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A72x2.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A72x2.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A72x2.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x2.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A72x2.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A72x2.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A72x2.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A72x2.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A72x2.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x2.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x2.bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_Base_Cortex_A72x2.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A72x2.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A72x2.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x2.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x2.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x2.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x2.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A72x2.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A72x2.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A72x2.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A72x2.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A72x2.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A72x2.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A72x2.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A72x2.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x2.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A72x2.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A72x2.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A72x2.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A72x2.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A72x2.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A72x2.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A72x2.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A72x2.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A72x2.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A72x2.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A72x2.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A72x2.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2.cluster0

ARM Cortex-A72 Cluster CT model.

Type: [Cluster_ARM_Cortex-A72](#).

FVP_Base_Cortex_A72x2.cluster0.cpu0

ARM Cortex-A72 CT model.

Type: [ARM_Cortex-A72](#).

FVP_Base_Cortex_A72x2.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A72x2.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A72x2.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A72x2.cluster0.cpu1

ARM Cortex-A72 CT model.

Type: [ARM_Cortex-A72](#).

FVP_Base_Cortex_A72x2.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A72x2.cluster0.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A72x2.cluster0.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A72x2.cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A72x2.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x2.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A72x2.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A72x2.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A72x2.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A72x2.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.38 FVP_Base_Cortex-A72x2-A53x4

List of instances in FVP_Base_Cortex-A72x2-A53x4.

FVP_Base_Cortex-A72x2-A53x4 instances

FVP_Base_Cortex_A72x2_A53x4

Base Platform Compute Subsystem for ARM Cortex A72x2CT and ARM Cortex A53x4CT.

Type: [FVP_Base_Cortex_A72x2_A53x4](#).

FVP_Base_Cortex_A72x2_A53x4.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A72x2_A53x4.bp.Timer_0_1

ARM Dual-Timer Module (SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A72x2_A53x4.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A72x2_A53x4.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A72x2_A53x4.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A72x2_A53x4.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A72x2_A53x4.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A72x2_A53x4.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A72x2_A53x4.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A72x2_A53x4.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2_A53x4.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2_A53x4.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2_A53x4.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2_A53x4.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2_A53x4.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_A72x2_A53x4.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x2_A53x4.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x2_A53x4.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x2_A53x4.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x2_A53x4.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A72x2_A53x4.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A72x2_A53x4.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2_A53x4.bp.hd1cd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.hd1cd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2_A53x4.bp.hd1cd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x2_A53x4.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A72x2_A53x4.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A72x2_A53x4.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2_A53x4.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2_A53x4.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A72x2_A53x4.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x2_A53x4.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x2_A53x4.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x2_A53x4.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A72x2_A53x4.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A72x2_A53x4.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2_A53x4.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2_A53x4.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A72x2_A53x4.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2_A53x4.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2_A53x4.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2_A53x4.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A72x2_A53x4.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A72x2_A53x4.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2_A53x4.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2_A53x4.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2_A53x4.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2_A53x4.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2_A53x4.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x2_A53x4.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x2_A53x4.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A72x2_A53x4.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A72x2_A53x4.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2_A53x4.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2_A53x4.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A72x2_A53x4.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2_A53x4.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x2_A53x4.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x2_A53x4.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x2_A53x4.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x2_A53x4.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A72x2_A53x4.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A72x2_A53x4.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A72x2_A53x4.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A72x2_A53x4.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2_A53x4.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2_A53x4.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2_A53x4.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A72x2_A53x4.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A72x2_A53x4.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A72x2_A53x4.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A72x2_A53x4.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x2_A53x4.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A72x2_A53x4.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A72x2_A53x4.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A72x2_A53x4.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A72x2_A53x4.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A72x2_A53x4.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A72x2_A53x4.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A72x2_A53x4.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A72x2_A53x4.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A72x2_A53x4.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A72x2_A53x4.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A72x2_A53x4.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x2_A53x4.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x2_A53x4.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A72x2_A53x4.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x2_A53x4.cluster0

ARM Cortex-A72 Cluster CT model.

Type: [Cluster_ARM_Cortex-A72](#).

FVP_Base_Cortex_A72x2_A53x4.cluster0.cpu0

ARM Cortex-A72 CT model.

Type: [ARM_Cortex-A72](#).

FVP_Base_Cortex_A72x2_A53x4.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A72x2_A53x4.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A72x2_A53x4.cluster0.cpu0.l1icache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A72x2_A53x4.cluster0.cpu1

ARM Cortex-A72 CT model.

Type: [ARM_Cortex-A72](#).

FVP_Base_Cortex_A72x2_A53x4.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

FVP_Base_Cortex_A72x2_A53x4.cluster0.cpu1.l1dcache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A72x2_A53x4.cluster0.cpu1.l1icache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A72x2_A53x4.cluster0.l2_cache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A72x2_A53x4.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x2_A53x4.cluster1

ARM Cortex-A53 Cluster CT model.

Type: `Cluster_ARM_Cortex-A53`.

FVP_Base_Cortex_A72x2_A53x4.cluster1.cpu0

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A72x2_A53x4.cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

Type: [pVCache](#).

FVP_Base_Cortex_A72x2_A53x4.cluster1_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x2_A53x4.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A72x2_A53x4.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A72x2_A53x4.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A72x2_A53x4.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A72x2_A53x4.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x2_A53x4.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x2_A53x4.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x2_A53x4.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

List of instances in FVP_Base_Cortex-A72x4.

FVP_Base_Cortex-A72x4 instances

FVP_Base_Cortex_A72x4

Base Platform Compute Subsystem for ARMCortexA72x4CT.

Type: [FVP_Base_Cortex_A72x4](#).

FVP_Base_Cortex_A72x4.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Cortex_A72x4.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A72x4.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A72x4.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A72x4.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A72x4.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A72x4.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A72x4.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A72x4.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A72x4.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A72x4.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A72x4.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A72x4.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A72x4.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A72x4.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x4.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x4.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x4.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x4.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A72x4.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_Base_Cortex_A72x4.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4.bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4.bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x4.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A72x4.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A72x4.bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A72x4.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x4.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x4.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A72x4.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4.bp.pl031_rtc.timer.timer.thread.event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A72x4.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A72x4.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A72x4.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A72x4.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A72x4.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x4.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A72x4.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A72x4.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A72x4.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A72x4.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A72x4.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x4.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x4.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A72x4.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A72x4.bp.sp805_wdog.clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4.bp.sp805_wdog.clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A72x4.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x4.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x4.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x4.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x4.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A72x4.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A72x4.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A72x4.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A72x4.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A72x4.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A72x4.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A72x4.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A72x4.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x4.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A72x4.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [VirtioBlockMMIO](#).

FVP_Base_Cortex_A72x4.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x4.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A72x4.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x4.bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_Base_Cortex_A72x4.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A72x4.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A72x4.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4.cluster0

ARM Cortex-A72 Cluster CT model.

Type: Cluster_ARM_Cortex-A72.

FVP_Base_Cortex_A72x4.cluster0.cpu0

ARM Cortex-A72 CT model.

Type: [ARM_Cortex-A72](#).**FVP_Base_Cortex_A72x4.cluster0.cpu0.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A72x4.cluster0.cpu0.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A72x4.cluster0.cpu0.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A72x4.cluster0.cpu1

ARM Cortex-A72 CT model.

Type: [ARM_Cortex-A72](#).**FVP_Base_Cortex_A72x4.cluster0.cpu1.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A72x4.cluster0.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A72x4.cluster0.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A72x4.cluster0.cpu2

ARM Cortex-A72 CT model.

Type: [ARM_Cortex-A72](#).**FVP_Base_Cortex_A72x4.cluster0.cpu2.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A72x4.cluster0.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A72x4.cluster0.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A72x4.cluster0.cpu3

ARM Cortex-A72 CT model.

Type: [ARM_Cortex-A72](#).

FVP_Base_Cortex_A72x4.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A72x4.cluster0.cpu3.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A72x4.cluster0.cpu3.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A72x4.cluster0.l2_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A72x4.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x4.dapmemlogger

Bus Logger.

Type: [PVBUSLogger](#).

FVP_Base_Cortex_A72x4.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A72x4.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A72x4.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A72x4.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke

wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.40 FVP_Base_Cortex-A72x4-A53x4

List of instances in FVP_Base_Cortex-A72x4-A53x4.

FVP_Base_Cortex-A72x4-A53x4 instances

FVP_Base_Cortex_A72x4_A53x4

Base Platform Compute Subsystem for ARM Cortex A72x4CT and ARM Cortex A53x4CT.

Type: [FVP_Base_Cortex_A72x4_A53x4](#).

FVP_Base_Cortex_A72x4_A53x4.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A72x4_A53x4.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A72x4_A53x4.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A72x4_A53x4.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A72x4_A53x4.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A72x4_A53x4.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A72x4_A53x4.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A72x4_A53x4.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A72x4_A53x4.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A72x4_A53x4.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4_A53x4.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4_A53x4.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4_A53x4.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4_A53x4.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4_A53x4.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_A72x4_A53x4.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x4_A53x4.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x4_A53x4.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x4_A53x4.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x4_A53x4.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A72x4_A53x4.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A72x4_A53x4.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4_A53x4.bp.hdlcd0.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.hdlcd0.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4_A53x4.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x4_A53x4.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A72x4_A53x4.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A72x4_A53x4.bp.mmc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.mmc.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4_A53x4.bp.mmc.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.mmc.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4_A53x4.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A72x4_A53x4.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x4_A53x4.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x4_A53x4.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x4_A53x4.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A72x4_A53x4.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A72x4_A53x4.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4_A53x4.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4_A53x4.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A72x4_A53x4.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4_A53x4.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4_A53x4.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4_A53x4.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A72x4_A53x4.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A72x4_A53x4.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4_A53x4.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4_A53x4.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4_A53x4.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4_A53x4.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4_A53x4.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A72x4_A53x4.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A72x4_A53x4.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A72x4_A53x4.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A72x4_A53x4.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4_A53x4.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4_A53x4.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A72x4_A53x4.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4_A53x4.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x4_A53x4.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x4_A53x4.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x4_A53x4.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A72x4_A53x4.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A72x4_A53x4.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A72x4_A53x4.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A72x4_A53x4.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A72x4_A53x4.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4_A53x4.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4_A53x4.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4_A53x4.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A72x4_A53x4.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A72x4_A53x4.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A72x4_A53x4.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A72x4_A53x4.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x4_A53x4.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A72x4_A53x4.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A72x4_A53x4.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A72x4_A53x4.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A72x4_A53x4.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A72x4_A53x4.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A72x4_A53x4.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A72x4_A53x4.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A72x4_A53x4.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A72x4_A53x4.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A72x4_A53x4.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A72x4_A53x4.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A72x4_A53x4.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A72x4_A53x4.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A72x4_A53x4.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A72x4_A53x4.cluster0

ARM Cortex-A72 Cluster CT model.

Type: [Cluster_ARM_Cortex-A72](#).

FVP_Base_Cortex_A72x4_A53x4.cluster0.cpu0

ARM Cortex-A72 CT model.

Type: [ARM_Cortex-A72](#).

FVP_Base_Cortex_A72x4_A53x4.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A72x4_A53x4.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A72x4_A53x4.cluster0.cpu0.l1icache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A72x4_A53x4.cluster0.cpu1

ARM Cortex-A72 CT model.

Type: [ARM_Cortex-A72](#).

FVP_Base_Cortex_A72x4_A53x4.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A72x4_A53x4.cluster0.cpu1.l1dcache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A72x4_A53x4.cluster0.cpu1.l1icache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A72x4_A53x4.cluster0.cpu2

ARM Cortex-A72 CT model.

Type: [ARM_Cortex-A72](#).

FVP_Base_Cortex_A72x4_A53x4.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A72x4_A53x4.cluster0.cpu2.l1dcache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A72x4_A53x4.cluster0.cpu2.l1icache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A72x4_A53x4.cluster0.cpu3

ARM Cortex-A72 CT model.

Type: [ARM_Cortex-A72](#).

FVP_Base_Cortex_A72x4_A53x4.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A72x4_A53x4.cluster0.cpu3.l1dcache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A72x4_A53x4.cluster0.cpu3.l1icache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A72x4_A53x4.cluster0.l2_cache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A72x4_A53x4.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x4_A53x4.cluster1

ARM Cortex-A53 Cluster CT model.

Type: [cluster_ARM_Cortex-A53](#).

FVP_Base_Cortex_A72x4_A53x4.cluster1.cpu0

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A72x4_A53x4.cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A72x4_A53x4.cluster1.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A72x4_A53x4.cluster1.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A72x4_A53x4.cluster1.cpu1

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A72x4_A53x4.cluster1.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A72x4_A53x4.cluster1.cpu1.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A72x4_A53x4.cluster1.cpu1.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A72x4_A53x4.cluster1.cpu2

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A72x4_A53x4.cluster1.cpu2.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A72x4_A53x4.cluster1.cpu2.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A72x4_A53x4.cluster1.cpu2.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A72x4_A53x4.cluster1.cpu3

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A72x4_A53x4.cluster1.cpu3.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A72x4_A53x4.cluster1.cpu3.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A72x4_A53x4.cluster1.cpu3.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A72x4_A53x4.cluster1.l2_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A72x4_A53x4.cluster1_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A72x4_A53x4.dapmemlogger

Bus Logger.

Type: [PVBUSLogger](#).

FVP_Base_Cortex_A72x4_A53x4.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A72x4_A53x4.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A72x4_A53x4.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A72x4_A53x4.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A72x4_A53x4.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A72x4_A53x4.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A72x4_A53x4.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.41 FVP_Base_Cortex-A73x1

List of instances in FVP_Base_Cortex-A73x1.

FVP_Base_Cortex-A73x1 instances

FVP_Base_Cortex_A73x1

Base Platform Compute Subsystem for ARMCortexA73x1CT.

Type: [FVP_Base_Cortex_A73x1](#).

FVP_Base_Cortex_A73x1.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A73x1.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A73x1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A73x1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A73x1.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A73x1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A73x1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A73x1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A73x1.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A73x1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_A73x1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A73x1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A73x1.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A73x1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A73x1.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A73x1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart1.timer.timer.thread_event
