A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A73x1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A73x1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A73x1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A73x1.bp.pl1050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A73x1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A73x1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A73x1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A73x1.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A73x1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A73x1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A73x1.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x1.bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_Base_Cortex_A73x1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A73x1.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A73x1.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x1.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x1.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x1.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A73x1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A73x1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A73x1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A73x1.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A73x1.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A73x1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A73x1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A73x1.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `virtioEntropyMMIO`.

FVP_Base_Cortex_A73x1.bp.virtioBlockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A73x1.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A73x1.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A73x1.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A73x1.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A73x1.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A73x1.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A73x1.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A73x1.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A73x1.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A73x1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1.cluster0

ARM Cortex-A73 Cluster CT model.

Type: [Cluster_ARM_Cortex-A73](#).

FVP_Base_Cortex_A73x1.cluster0.cpu0

ARM Cortex-A73 CT model.

Type: [ARM_Cortex-A73](#).

FVP_Base_Cortex_A73x1.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A73x1.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A73x1.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A73x1.cluster0.l2_cache

PV Cache.

Type: `PVCache`.

FVP_Base_Cortex_A73x1.cluster0_labeller

Type: `Labeller`.

FVP_Base_Cortex_A73x1.dapmemlogger

Bus Logger.

Type: `PVBusLogger`.

FVP_Base_Cortex_A73x1.elfloader

ELF loader component.

Type: `ElfLoader`.

FVP_Base_Cortex_A73x1.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: `GIC_IRI`.

FVP_Base_Cortex_A73x1.pctl

Base Platforms Power Controller.

Type: `Base_PowerController`.

FVP_Base_Cortex_A73x1.pctl.timer_reset

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A73x1.pctl.timer_reset.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A73x1.pctl.timer_reset.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A73x1.pctl.timer_reset.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

13.42 FVP_Base_Cortex-A73x1-A53x1

List of instances in FVP_Base_Cortex-A73x1-A53x1.

FVP_Base_Cortex-A73x1-A53x1 instances

FVP_Base_Cortex_A73x1_A53x1

Base Platform Compute Subsystem for ARM Cortex A73x1CT and ARM Cortex A53x1CT.

Type: `FVP_Base_Cortex_A73x1_A53x1`.

FVP_Base_Cortex_A73x1_A53x1.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Cortex_A73x1_A53x1.bp.Timer_0_1

ARM Dual-Timer Module (SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A73x1_A53x1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A73x1_A53x1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A73x1_A53x1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A73x1_A53x1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A73x1_A53x1.bp.Timer_2_3

ARM Dual-Timer Module (SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A73x1_A53x1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A73x1_A53x1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A73x1_A53x1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A73x1_A53x1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A73x1_A53x1.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A73x1_A53x1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1_A53x1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1_A53x1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1_A53x1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1_A53x1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1_A53x1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A73x1_A53x1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x1_A53x1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x1_A53x1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x1_A53x1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x1_A53x1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A73x1_A53x1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A73x1_A53x1.bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1_A53x1.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1_A53x1.bp.hd1cd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x1_A53x1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A73x1_A53x1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A73x1_A53x1.bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1_A53x1.bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1_A53x1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A73x1_A53x1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x1_A53x1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x1_A53x1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x1_A53x1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A73x1_A53x1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A73x1_A53x1.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1_A53x1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1_A53x1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A73x1_A53x1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1_A53x1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1_A53x1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1_A53x1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A73x1_A53x1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A73x1_A53x1.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1_A53x1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1_A53x1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1_A53x1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1_A53x1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1_A53x1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x1_A53x1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x1_A53x1.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A73x1_A53x1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A73x1_A53x1.bp.sp805_wdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1_A53x1.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1_A53x1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A73x1_A53x1.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1_A53x1.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x1_A53x1.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x1_A53x1.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x1_A53x1.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x1_A53x1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A73x1_A53x1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A73x1_A53x1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A73x1_A53x1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A73x1_A53x1.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1_A53x1.bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1_A53x1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A73x1_A53x1.bp.ve_sysregs

Type: `VE_SysRegs`.

FVP_Base_Cortex_A73x1_A53x1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

FVP_Base_Cortex_A73x1_A53x1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A73x1_A53x1.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x1_A53x1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

FVP_Base_Cortex_A73x1_A53x1.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `VirtioBlockMMIO`.

FVP_Base_Cortex_A73x1_A53x1.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x1_A53x1.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A73x1_A53x1.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x1_A53x1.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A73x1_A53x1.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A73x1_A53x1.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1_A53x1.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1_A53x1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x1_A53x1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x1_A53x1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A73x1_A53x1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x1_A53x1.cluster0

ARM Cortex-A73 Cluster CT model.

Type: [Cluster_ARM_Cortex-A73](#).

FVP_Base_Cortex_A73x1_A53x1.cluster0.cpu0

ARM Cortex-A73 CT model.

Type: [ARM_Cortex-A73](#).

FVP_Base_Cortex_A73x1_A53x1.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A73x1_A53x1.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A73x1_A53x1.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A73x1_A53x1.cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A73x1_A53x1.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x1_A53x1.cluster1

ARM Cortex-A53 Cluster CT model.

Type: [Cluster_ARM_Cortex-A53](#).

FVP_Base_Cortex_A73x1_A53x1.cluster1.cpu0

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A73x1_A53x1.cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A73x1_A53x1.cluster1.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A73x1_A53x1.cluster1.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A73x1_A53x1.cluster1.l2_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A73x1_A53x1.cluster1.labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x1_A53x1.dapmemlogger

Bus Logger.

Type: [PVBUSLogger](#).

FVP_Base_Cortex_A73x1_A53x1.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A73x1_A53x1.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A73x1_A53x1.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A73x1_A53x1.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x1_A53x1.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x1_A53x1.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x1_A53x1.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.43 FVP_Base_Cortex-A73x2

List of instances in FVP_Base_Cortex-A73x2.

FVP_Base_Cortex-A73x2 instances

FVP_Base_Cortex_A73x2

Base Platform Compute Subsystem for ARMCortexA73x2CT.

Type: [FVP_Base_Cortex_A73x2](#).

FVP_Base_Cortex_A73x2.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A73x2.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A73x2.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A73x2.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A73x2.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A73x2.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A73x2.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A73x2.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A73x2.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A73x2.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_A73x2.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x2.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x2.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x2.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x2.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A73x2.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A73x2.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x2.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A73x2.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A73x2.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A73x2.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x2.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x2.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A73x2.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A73x2.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A73x2.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A73x2.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A73x2.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A73x2.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x2.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A73x2.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A73x2.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A73x2.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A73x2.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A73x2.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x2.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x2.bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_Base_Cortex_A73x2.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A73x2.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A73x2.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x2.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x2.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x2.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x2.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A73x2.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A73x2.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A73x2.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A73x2.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A73x2.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A73x2.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A73x2.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A73x2.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x2.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A73x2.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A73x2.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A73x2.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A73x2.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A73x2.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A73x2.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A73x2.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A73x2.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A73x2.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A73x2.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A73x2.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A73x2.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2.cluster0

ARM Cortex-A73 Cluster CT model.

Type: [Cluster_ARM_Cortex-A73](#).

FVP_Base_Cortex_A73x2.cluster0.cpu0

ARM Cortex-A73 CT model.

Type: [ARM_Cortex-A73](#).

FVP_Base_Cortex_A73x2.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A73x2.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A73x2.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A73x2.cluster0.cpu1

ARM Cortex-A73 CT model.

Type: [ARM_Cortex-A73](#).

FVP_Base_Cortex_A73x2.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A73x2.cluster0.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A73x2.cluster0.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A73x2.cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A73x2.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x2.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A73x2.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A73x2.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A73x2.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A73x2.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.44 FVP_Base_Cortex-A73x2-A53x4

List of instances in FVP_Base_Cortex-A73x2-A53x4.

FVP_Base_Cortex-A73x2-A53x4 instances

FVP_Base_Cortex_A73x2_A53x4

Base Platform Compute Subsystem for ARM Cortex A73x2CT and ARM Cortex A53x4CT.

Type: [FVP_Base_Cortex_A73x2_A53x4](#).

FVP_Base_Cortex_A73x2_A53x4.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A73x2_A53x4.bp.Timer_0_1

ARM Dual-Timer Module (SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A73x2_A53x4.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A73x2_A53x4.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A73x2_A53x4.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A73x2_A53x4.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A73x2_A53x4.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A73x2_A53x4.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A73x2_A53x4.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A73x2_A53x4.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2_A53x4.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2_A53x4.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2_A53x4.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2_A53x4.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2_A53x4.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_A73x2_A53x4.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x2_A53x4.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x2_A53x4.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x2_A53x4.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x2_A53x4.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A73x2_A53x4.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A73x2_A53x4.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2_A53x4.bp.hd1cd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.hd1cd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2_A53x4.bp.hd1cd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x2_A53x4.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A73x2_A53x4.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A73x2_A53x4.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2_A53x4.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2_A53x4.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A73x2_A53x4.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x2_A53x4.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x2_A53x4.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x2_A53x4.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A73x2_A53x4.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A73x2_A53x4.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2_A53x4.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2_A53x4.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A73x2_A53x4.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2_A53x4.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2_A53x4.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2_A53x4.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A73x2_A53x4.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A73x2_A53x4.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2_A53x4.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2_A53x4.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2_A53x4.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2_A53x4.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2_A53x4.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x2_A53x4.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x2_A53x4.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A73x2_A53x4.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A73x2_A53x4.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2_A53x4.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2_A53x4.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A73x2_A53x4.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2_A53x4.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x2_A53x4.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x2_A53x4.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x2_A53x4.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x2_A53x4.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A73x2_A53x4.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A73x2_A53x4.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A73x2_A53x4.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A73x2_A53x4.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2_A53x4.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2_A53x4.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2_A53x4.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A73x2_A53x4.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A73x2_A53x4.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A73x2_A53x4.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A73x2_A53x4.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x2_A53x4.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A73x2_A53x4.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A73x2_A53x4.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A73x2_A53x4.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A73x2_A53x4.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A73x2_A53x4.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A73x2_A53x4.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A73x2_A53x4.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A73x2_A53x4.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A73x2_A53x4.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A73x2_A53x4.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A73x2_A53x4.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x2_A53x4.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x2_A53x4.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A73x2_A53x4.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x2_A53x4.cluster0

ARM Cortex-A73 Cluster CT model.

Type: [Cluster_ARM_Cortex-A73](#).

FVP_Base_Cortex_A73x2_A53x4.cluster0.cpu0

ARM Cortex-A73 CT model.

Type: [ARM_Cortex-A73](#).

FVP_Base_Cortex_A73x2_A53x4.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A73x2_A53x4.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A73x2_A53x4.cluster0.cpu0.l1icache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A73x2_A53x4.cluster0.cpu1

ARM Cortex-A73 CT model.

Type: [ARM_Cortex-A73](#).

FVP_Base_Cortex_A73x2_A53x4.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: `Tlbcadi`.

FVP_Base_Cortex_A73x2_A53x4.cluster0.cpu1.l1dcache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A73x2_A53x4.cluster0.cpu1.l1icache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A73x2_A53x4.cluster0.l2_cache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A73x2_A53x4.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x2_A53x4.cluster1

ARM Cortex-A53 Cluster CT model.

Type: `Cluster_ARM_Cortex-A53`.

FVP_Base_Cortex_A73x2_A53x4.cluster1.cpu0

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A73x2_A53x4.cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: `Tlbcadi`.

FVP_Base_Cortex_A73x2_A53x4.cluster1.cpu0.l1dcache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A73x2_A53x4.cluster1.cpu0.l1icache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A73x2_A53x4.cluster1.cpu1

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A73x2_A53x4.cluster1.cpu1.dtlb

TLB - instruction, data or unified.

Type: `Tlbcadi`.

FVP_Base_Cortex_A73x2_A53x4.cluster1.cpu1.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A73x2_A53x4.cluster1.cpu1.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A73x2_A53x4.cluster1.cpu2

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A73x2_A53x4.cluster1.cpu2.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A73x2_A53x4.cluster1.cpu2.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A73x2_A53x4.cluster1.cpu2.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A73x2_A53x4.cluster1.cpu3

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A73x2_A53x4.cluster1.cpu3.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A73x2_A53x4.cluster1.cpu3.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A73x2_A53x4.cluster1.cpu3.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A73x2_A53x4.cluster1.l2_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A73x2_A53x4.cluster1_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x2_A53x4.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_A73x2_A53x4.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_A73x2_A53x4.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A73x2_A53x4.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A73x2_A53x4.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x2_A53x4.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x2_A53x4.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x2_A53x4.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.45 FVP_Base_Cortex-A73x4

List of instances in FVP_Base_Cortex-A73x4.

FVP_Base_Cortex-A73x4 instances

FVP_Base_Cortex_A73x4

Base Platform Compute Subsystem for ARMCortexA73x4CT.

Type: [FVP_Base_Cortex_A73x4](#).

FVP_Base_Cortex_A73x4.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Cortex_A73x4.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A73x4.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A73x4.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A73x4.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A73x4.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A73x4.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Cortex_A73x4.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A73x4.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A73x4.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Cortex_A73x4.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A73x4.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A73x4.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A73x4.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A73x4.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x4.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x4.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x4.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x4.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A73x4.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_Base_Cortex_A73x4.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4.bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4.bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x4.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A73x4.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A73x4.bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A73x4.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x4.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x4.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A73x4.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A73x4.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A73x4.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A73x4.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A73x4.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A73x4.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x4.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A73x4.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A73x4.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A73x4.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A73x4.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A73x4.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x4.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x4.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A73x4.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A73x4.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A73x4.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x4.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x4.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x4.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x4.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A73x4.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A73x4.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A73x4.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A73x4.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A73x4.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A73x4.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A73x4.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A73x4.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x4.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A73x4.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [VirtioBlockMMIO](#).

FVP_Base_Cortex_A73x4.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x4.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Cortex_A73x4.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x4.bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_Base_Cortex_A73x4.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Cortex_A73x4.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A73x4.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4.cluster0

FVP_Base_Cortex_A73x4.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_A73x4.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_A73x4.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke

wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.46 FVP_Base_Cortex-A73x4-A53x4

List of instances in FVP_Base_Cortex-A73x4-A53x4.

FVP_Base_Cortex-A73x4-A53x4 instances

FVP_Base_Cortex_A73x4_A53x4

Base Platform Compute Subsystem for ARM CortexA73x4CT and ARM CortexA53x4CT.

Type: [FVP_Base_Cortex_A73x4_A53x4](#).

FVP_Base_Cortex_A73x4_A53x4.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A73x4_A53x4.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A73x4_A53x4.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A73x4_A53x4.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A73x4_A53x4.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A73x4_A53x4.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A73x4_A53x4.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A73x4_A53x4.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A73x4_A53x4.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A73x4_A53x4.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4_A53x4.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4_A53x4.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4_A53x4.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4_A53x4.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4_A53x4.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_A73x4_A53x4.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x4_A53x4.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x4_A53x4.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x4_A53x4.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x4_A53x4.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A73x4_A53x4.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A73x4_A53x4.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4_A53x4.bp.hd1cd0.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.hd1cd0.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4_A53x4.bp.hd1cd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x4_A53x4.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A73x4_A53x4.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A73x4_A53x4.bp.mmc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.mmc.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4_A53x4.bp.mmc.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.mmc.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4_A53x4.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A73x4_A53x4.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x4_A53x4.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x4_A53x4.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart3.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart3.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl011_uart3.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl031_rtc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl031_rtc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl031_rtc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl031_rtc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x4_A53x4.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A73x4_A53x4.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A73x4_A53x4.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4_A53x4.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4_A53x4.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A73x4_A53x4.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4_A53x4.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4_A53x4.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4_A53x4.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A73x4_A53x4.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A73x4_A53x4.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4_A53x4.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4_A53x4.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4_A53x4.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4_A53x4.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4_A53x4.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A73x4_A53x4.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A73x4_A53x4.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A73x4_A53x4.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A73x4_A53x4.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4_A53x4.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4_A53x4.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A73x4_A53x4.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4_A53x4.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x4_A53x4.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x4_A53x4.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x4_A53x4.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A73x4_A53x4.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A73x4_A53x4.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A73x4_A53x4.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A73x4_A53x4.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A73x4_A53x4.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4_A53x4.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4_A53x4.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4_A53x4.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A73x4_A53x4.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A73x4_A53x4.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A73x4_A53x4.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A73x4_A53x4.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x4_A53x4.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A73x4_A53x4.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A73x4_A53x4.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A73x4_A53x4.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A73x4_A53x4.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A73x4_A53x4.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A73x4_A53x4.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A73x4_A53x4.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A73x4_A53x4.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A73x4_A53x4.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A73x4_A53x4.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A73x4_A53x4.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A73x4_A53x4.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A73x4_A53x4.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A73x4_A53x4.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A73x4_A53x4.cluster0

ARM Cortex-A73 Cluster CT model.

Type: [Cluster_ARM_Cortex-A73](#).

FVP_Base_Cortex_A73x4_A53x4.cluster0.cpu0

ARM Cortex-A73 CT model.

Type: [ARM_Cortex-A73](#).

FVP_Base_Cortex_A73x4_A53x4.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A73x4_A53x4.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_A73x4_A53x4.cluster0.cpu0.l1icache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A73x4_A53x4.cluster0.cpu1

ARM Cortex-A73 CT model.

Type: [ARM_Cortex-A73](#).

FVP_Base_Cortex_A73x4_A53x4.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A73x4_A53x4.cluster0.cpu1.l1dcache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A73x4_A53x4.cluster0.cpu1.l1icache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A73x4_A53x4.cluster0.cpu2

ARM Cortex-A73 CT model.

Type: [ARM_Cortex-A73](#).

FVP_Base_Cortex_A73x4_A53x4.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A73x4_A53x4.cluster0.cpu2.l1dcache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A73x4_A53x4.cluster0.cpu2.l1icache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A73x4_A53x4.cluster0.cpu3

ARM Cortex-A73 CT model.

Type: [ARM_Cortex-A73](#).

FVP_Base_Cortex_A73x4_A53x4.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A73x4_A53x4.cluster0.cpu3.l1dcache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A73x4_A53x4.cluster0.cpu3.l1icache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A73x4_A53x4.cluster0.l2_cache

PV Cache.

Type: pvcache.

FVP_Base_Cortex_A73x4_A53x4.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A73x4_A53x4.cluster1

ARM Cortex-A53 Cluster CT model.

Type: [cluster_ARM_Cortex-A53](#).

FVP_Base_Cortex_A73x4_A53x4.cluster1.cpu0

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A73x4_A53x4.cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A73x4_A53x4.cluster1.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A73x4_A53x4.cluster1.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A73x4_A53x4.cluster1.cpu1

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A73x4_A53x4.cluster1.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A73x4_A53x4.cluster1.cpu1.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A73x4_A53x4.cluster1.cpu1.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A73x4_A53x4.cluster1.cpu2

ARM Cortex-A53 CT model.

Type: [ARM_Cortex-A53](#).

FVP_Base_Cortex_A73x4_A53x4.cluster1.cpu2.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A73x4_A53x4.cluster1.cpu2.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A73x4_A53x4.cluster1.cpu2.l1icache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A73x4_A53x4.cluster1.cpu3

ARM Cortex-A53 CT model.

Type: `ARM_Cortex-A53`.

FVP_Base_Cortex_A73x4_A53x4.cluster1.cpu3.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

FVP_Base_Cortex_A73x4_A53x4.cluster1.cpu3.l1dcache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A73x4_A53x4.cluster1.cpu3.l1icache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A73x4_A53x4.cluster1.l2_cache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_A73x4_A53x4.cluster1_labeller

Type: `Labeller`.

FVP_Base_Cortex_A73x4_A53x4.dapmemlogger

Bus Logger.

Type: `PVBusLogger`.

FVP_Base_Cortex_A73x4_A53x4.elfloader

ELF loader component.

Type: `ElfLoader`.

FVP_Base_Cortex_A73x4_A53x4.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: `GIC_IRI`.

FVP_Base_Cortex_A73x4_A53x4.pctl

Base Platforms Power Controller.

Type: `Base_PowerController`.

FVP_Base_Cortex_A73x4_A53x4.pctl.timer_reset

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A73x4_A53x4.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A73x4_A53x4.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A73x4_A53x4.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.47 FVP_Base_Cortex-A75

List of instances in FVP_Base_Cortex-A75.

FVP_Base_Cortex-A75 instances

FVP_Base_Cortex_A75

Base Platform Compute Subsystem for ARMCortexA75CT.

Type: [FVP_Base_Cortex_A75](#).

FVP_Base_Cortex_A75.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A75.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A75.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A75.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A75.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A75.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A75.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A75.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A75.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A75.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A75.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A75.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A75.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A75.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A75.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_A75.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A75.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A75.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A75.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A75.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A75.bp.hd1cd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A75.bp.hd1cd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A75.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A75.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A75.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A75.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A75.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A75.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A75.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A75.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A75.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A75.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A75.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A75.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A75.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A75.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A75.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A75.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A75.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A75.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A75.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A75.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A75.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A75.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A75.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A75.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A75.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A75.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A75.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A75.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A75.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A75.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A75.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A75.bp.p1011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A75.bp.p1011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A75.bp.p1011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A75.bp.p1031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A75.bp.p1031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A75.bp.p1031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A75.bp.p1031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A75.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A75.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A75.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A75.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A75.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A75.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A75.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A75.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A75.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A75.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A75.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A75.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A75.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A75.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A75.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A75.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A75.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A75.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A75.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A75.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A75.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A75.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A75.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A75.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A75.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A75.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A75.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A75.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A75.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A75.bp.r1_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A75.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A75.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A75.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A75.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A75.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A75.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A75.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A75.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A75.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A75.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A75.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A75.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A75.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A75.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A75.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A75.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A75.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A75.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A75.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A75.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A75.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A75.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A75.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A75.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A75.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A75.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A75.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A75.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A75.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A75.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A75.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A75.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `virtioEntropyMMIO`.

FVP_Base_Cortex_A75.bp.virtioBlockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A75.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A75.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A75.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A75.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A75.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A75.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A75.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A75.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A75.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A75.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A75.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A75.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A75.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A75.cluster0

ARM Cortex-A75 Cluster CT model.

Type: [cluster_ARM_Cortex-A75](#).

FVP_Base_Cortex_A75.cluster0.DSU.shared_cache

PV Cache.

Type: [pvcache](#).

FVP_Base_Cortex_A75.cluster0.cpu0

ARM Cortex-A75 CT model.

Type: [ARM_Cortex-A75](#).

FVP_Base_Cortex_A75.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [tlbCadi](#).

FVP_Base_Cortex_A75.cluster0.cpu0.l1dcache

PV Cache.

Type: [pvcache](#).

FVP_Base_Cortex_A75.cluster0.cpu0.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A75.cluster0.cpu0.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A75.cluster0.cpu1

ARM Cortex-A75 CT model.

Type: [ARM_Cortex-A75](#).

FVP_Base_Cortex_A75.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A75.cluster0.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A75.cluster0.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A75.cluster0.cpu1.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A75.cluster0.cpu2

ARM Cortex-A75 CT model.

Type: [ARM_Cortex-A75](#).

FVP_Base_Cortex_A75.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A75.cluster0.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A75.cluster0.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A75.cluster0.cpu2.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A75.cluster0.cpu3

ARM Cortex-A75 CT model.

Type: [ARM_Cortex-A75](#).

FVP_Base_Cortex_A75.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A75.cluster0.cpu3.l1dcache

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_A75.cluster0.cpu3.l1icache**

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_A75.cluster0.cpu3.l2cache**

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_A75.cluster0_labeller**Type: [Labeller](#).**FVP_Base_Cortex_A75.dapmemlogger**

Bus Logger.

Type: [PVBUSLogger](#).**FVP_Base_Cortex_A75.elfloader**

ELF loader component.

Type: [ElfLoader](#).**FVP_Base_Cortex_A75.gic_distributor**

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).**FVP_Base_Cortex_A75.pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).**FVP_Base_Cortex_A75.pctl.timer_reset**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).**FVP_Base_Cortex_A75.pctl.timer_reset.timer**

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).**FVP_Base_Cortex_A75.pctl.timer_reset.timer.thread**A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A75.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.48 FVP_Base_Cortex-A76

List of instances in FVP_Base_Cortex-A76.

FVP_Base_Cortex-A76 instances

FVP_Base_Cortex_A76

Base Platform Compute Subsystem for ARMCortexA76CT.

Type: [FVP_Base_Cortex_A76](#).

FVP_Base_Cortex_A76.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A76.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A76.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A76.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A76.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A76.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A76.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A76.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A76.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A76.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A76.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A76.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A76.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A76.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A76.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A76.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A76.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76.bp.hdld0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76.bp.hdld0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76.bp.hdld0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A76.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A76.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A76.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A76.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A76.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A76.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A76.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A76.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A76.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A76.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A76.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A76.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A76.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A76.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A76.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A76.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A76.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A76.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A76.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A76.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A76.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A76.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A76.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A76.bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_Base_Cortex_A76.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A76.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A76.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A76.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A76.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A76.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A76.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A76.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A76.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A76.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A76.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A76.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A76.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A76.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A76.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A76.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A76.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A76.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A76.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A76.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A76.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A76.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A76.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A76.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A76.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A76.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A76.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A76.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76.cluster0

ARM Cortex-A76 Cluster CT model.

Type: [Cluster_ARM_Cortex-A76](#).

FVP_Base_Cortex_A76.cluster0.DSU.shared_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A76.cluster0.cpu0

ARM Cortex-A76 CT model.

Type: [ARM_Cortex-A76](#).

FVP_Base_Cortex_A76.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A76.cluster0.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A76.cluster0.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A76.cluster0.cpu0.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A76.cluster0.cpu1

ARM Cortex-A76 CT model.

Type: [ARM_Cortex-A76](#).

FVP_Base_Cortex_A76.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A76.cluster0.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A76.cluster0.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A76.cluster0.cpu1.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A76.cluster0.cpu2

ARM Cortex-A76 CT model.

Type: [ARM_Cortex-A76](#).

FVP_Base_Cortex_A76.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A76.cluster0.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A76.cluster0.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A76.cluster0.cpu2.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A76.cluster0.cpu3

ARM Cortex-A76 CT model.

Type: [ARM_Cortex-A76](#).

FVP_Base_Cortex_A76.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A76.cluster0.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A76.cluster0.cpu3.l1icache

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_A76.cluster0.cpu3.l2cache**

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_A76.cluster0_labeller**Type: [Labeller](#).**FVP_Base_Cortex_A76.dapmemlogger**

Bus Logger.

Type: [PVBUSLogger](#).**FVP_Base_Cortex_A76.elfloader**

ELF loader component.

Type: [ElfLoader](#).**FVP_Base_Cortex_A76.gic_distributor**

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).**FVP_Base_Cortex_A76.pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).**FVP_Base_Cortex_A76.pctl.timer_reset**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).**FVP_Base_Cortex_A76.pctl.timer_reset.timer**

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).**FVP_Base_Cortex_A76.pctl.timer_reset.timer.thread**A [SchedulerThread](#) instance represents a co-routine thread in the simulation.Type: [SchedulerThread](#).

FVP_Base_Cortex_A76.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.49 FVP_Base_Cortex-A76AE

List of instances in FVP_Base_Cortex-A76AE.

FVP_Base_Cortex-A76AE instances

FVP_Base_Cortex_A76AE

Base Platform Compute Subsystem for ARMCortexA76AECT.

Type: [FVP_Base_Cortex_A76AE](#).

FVP_Base_Cortex_A76AE.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A76AE.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A76AE.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A76AE.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A76AE.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A76AE.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A76AE.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A76AE.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A76AE.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A76AE.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76AE.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76AE.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76AE.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76AE.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76AE.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A76AE.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A76AE.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A76AE.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A76AE.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A76AE.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A76AE.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A76AE.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76AE.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76AE.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76AE.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76AE.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A76AE.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A76AE.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A76AE.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76AE.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76AE.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76AE.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76AE.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A76AE.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A76AE.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A76AE.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76AE.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76AE.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A76AE.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76AE.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76AE.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76AE.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76AE.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A76AE.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76AE.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76AE.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76AE.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76AE.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A76AE.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A76AE.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A76AE.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A76AE.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76AE.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76AE.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76AE.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76AE.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A76AE.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A76AE.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A76AE.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76AE.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76AE.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76AE.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76AE.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A76AE.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76AE.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76AE.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76AE.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76AE.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76AE.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A76AE.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A76AE.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76AE.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76AE.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76AE.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76AE.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76AE.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A76AE.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A76AE.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A76AE.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A76AE.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76AE.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76AE.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76AE.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76AE.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A76AE.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76AE.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A76AE.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A76AE.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A76AE.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A76AE.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A76AE.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A76AE.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A76AE.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A76AE.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A76AE.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A76AE.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A76AE.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76AE.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A76AE.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A76AE.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A76AE.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A76AE.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A76AE.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A76AE.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A76AE.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A76AE.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A76AE.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A76AE.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A76AE.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A76AE.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A76AE.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A76AE.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A76AE.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A76AE.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A76AE.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A76AE.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A76AE.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A76AE.cluster0

ARM Cortex-A76AE Cluster CT model.

Type: [Cluster_ARM_Cortex-A76AE](#).

FVP_Base_Cortex_A76AE.cluster0.DSU.shared_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A76AE.cluster0.cpu0

ARM Cortex-A76AE CT model.

Type: [ARM_Cortex-A76AE](#).

FVP_Base_Cortex_A76AE.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A76AE.cluster0.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A76AE.cluster0.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A76AE.cluster0.cpu0.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A76AE.cluster0.cpu1

ARM Cortex-A76AE CT model.

Type: [ARM_Cortex-A76AE](#).

FVP_Base_Cortex_A76AE.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A76AE.cluster0.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A76AE.cluster0.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A76AE.cluster0.cpu1.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A76AE.cluster0.cpu2

ARM Cortex-A76AE CT model.

Type: [ARM_Cortex-A76AE](#).

FVP_Base_Cortex_A76AE.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A76AE.cluster0.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A76AE.cluster0.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A76AE.cluster0.cpu2.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A76AE.cluster0.cpu3

ARM Cortex-A76AE CT model.

Type: [ARM_Cortex-A76AE](#).

FVP_Base_Cortex_A76AE.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A76AE.cluster0.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A76AE.cluster0.cpu3.l1icache

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_A76AE.cluster0.cpu3.l2cache**

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_A76AE.cluster0_labeller**Type: [Labeller](#).**FVP_Base_Cortex_A76AE.dapmemlogger**

Bus Logger.

Type: [PVBusLogger](#).**FVP_Base_Cortex_A76AE.elfloader**

ELF loader component.

Type: [ElfLoader](#).**FVP_Base_Cortex_A76AE.gic_distributor**

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).**FVP_Base_Cortex_A76AE.pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).**FVP_Base_Cortex_A76AE.pctl.timer_reset**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).**FVP_Base_Cortex_A76AE.pctl.timer_reset.timer**

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).**FVP_Base_Cortex_A76AE.pctl.timer_reset.timer.thread**A [SchedulerThread](#) instance represents a co-routine thread in the simulation.Type: [SchedulerThread](#).

FVP_Base_Cortex_A76AE.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.50 FVP_Base_Cortex-A77

List of instances in FVP_Base_Cortex-A77.

FVP_Base_Cortex-A77 instances

FVP_Base_Cortex_A77

Base Platform Compute Subsystem for ARMCortexA77CT.

Type: [FVP_Base_Cortex_A77](#).

FVP_Base_Cortex_A77.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A77.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A77.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A77.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A77.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A77.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A77.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A77.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A77.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A77.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A77.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A77.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A77.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A77.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A77.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A77.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A77.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A77.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A77.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A77.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A77.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A77.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A77.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A77.bp.hdld0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A77.bp.hdld0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A77.bp.hdld0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A77.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A77.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A77.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A77.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A77.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A77.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A77.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A77.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A77.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A77.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A77.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A77.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A77.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A77.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A77.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A77.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A77.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A77.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A77.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A77.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A77.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A77.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A77.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A77.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A77.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A77.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A77.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A77.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A77.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A77.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A77.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A77.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A77.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A77.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A77.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A77.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A77.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A77.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A77.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A77.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A77.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A77.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A77.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A77.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A77.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A77.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A77.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A77.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A77.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A77.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A77.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A77.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A77.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A77.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A77.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A77.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A77.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A77.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A77.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A77.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A77.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A77.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A77.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A77.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A77.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A77.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A77.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A77.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A77.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A77.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A77.bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_Base_Cortex_A77.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A77.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A77.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A77.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A77.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A77.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A77.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A77.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A77.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A77.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A77.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A77.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A77.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A77.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A77.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A77.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A77.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A77.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A77.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A77.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A77.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A77.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A77.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A77.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A77.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A77.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A77.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A77.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A77.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A77.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A77.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A77.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A77.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A77.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A77.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A77.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A77.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A77.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A77.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A77.cluster0

ARM Cortex-A77 Cluster CT model.

Type: [Cluster_ARM_Cortex-A77](#).

FVP_Base_Cortex_A77.cluster0.DSU.shared_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A77.cluster0.cpu0

ARM Cortex-A77 CT model.

Type: [ARM_Cortex-A77](#).

FVP_Base_Cortex_A77.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A77.cluster0.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A77.cluster0.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A77.cluster0.cpu0.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A77.cluster0.cpu1

ARM Cortex-A77 CT model.

Type: [ARM_Cortex-A77](#).

FVP_Base_Cortex_A77.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A77.cluster0.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A77.cluster0.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A77.cluster0.cpu1.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A77.cluster0.cpu2

ARM Cortex-A77 CT model.

Type: [ARM_Cortex-A77](#).

FVP_Base_Cortex_A77.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A77.cluster0.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A77.cluster0.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A77.cluster0.cpu2.l2cache

PV Cache.

Type: pVCache.

ELF loader component.

Type: [ElfLoader](#).**FVP_Base_Cortex_A77.gic_distributor**

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).**FVP_Base_Cortex_A77.pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).**FVP_Base_Cortex_A77.pctl.timer_reset**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).**FVP_Base_Cortex_A77.pctl.timer_reset.timer**

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).**FVP_Base_Cortex_A77.pctl.timer_reset.timer.thread**A [SchedulerThread](#) instance represents a co-routine thread in the simulation.Type: [SchedulerThread](#).

FVP_Base_Cortex_A77.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.51 FVP_Base_Cortex-A78

List of instances in FVP_Base_Cortex-A78.

FVP_Base_Cortex-A78 instances

FVP_Base_Cortex_A78

Base Platform Compute Subsystem for ARMCortexA78CT.

Type: [FVP_Base_Cortex_A78](#).

FVP_Base_Cortex_A78.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A78.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A78.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A78.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A78.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A78.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A78.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A78.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A78.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A78.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A78.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A78.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A78.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A78.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A78.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A78.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A78.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A78.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A78.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A78.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A78.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A78.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A78.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A78.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A78.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A78.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A78.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A78.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A78.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A78.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A78.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A78.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A78.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A78.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A78.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A78.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A78.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A78.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A78.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A78.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A78.bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_Base_Cortex_A78.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A78.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A78.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A78.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A78.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A78.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A78.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A78.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A78.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A78.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A78.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A78.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A78.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A78.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A78.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A78.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A78.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A78.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A78.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A78.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A78.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A78.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A78.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A78.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A78.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A78.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A78.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A78.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78.cluster0

ARM Cortex-A78 Cluster CT model.

Type: [Cluster_ARM_Cortex-A78](#).

FVP_Base_Cortex_A78.cluster0.DSU.shared_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A78.cluster0.cpu0

ARM Cortex-A78 CT model.

Type: [ARM_Cortex-A78](#).

FVP_Base_Cortex_A78.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A78.cluster0.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A78.cluster0.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A78.cluster0.cpu0.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A78.cluster0.cpu1

ARM Cortex-A78 CT model.

Type: [ARM_Cortex-A78](#).

FVP_Base_Cortex_A78.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A78.cluster0.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A78.cluster0.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A78.cluster0.cpu1.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A78.cluster0.cpu2

ARM Cortex-A78 CT model.

Type: [ARM_Cortex-A78](#).

FVP_Base_Cortex_A78.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A78.cluster0.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A78.cluster0.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A78.cluster0.cpu2.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A78.cluster0.cpu3

ARM Cortex-A78 CT model.

Type: [ARM_Cortex-A78](#).

FVP_Base_Cortex_A78.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_A78.cluster0.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_A78.cluster0.cpu3.l1icache

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_A78.cluster0.cpu3.l2cache**

PV Cache.

Bus Logger.

Type: [PVBUSLogger](#).**FVP_Base_Cortex_A78.elfloader**

ELF loader component.

Type: [ElfLoader](#).**FVP_Base_Cortex_A78.gic_distributor**

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).**FVP_Base_Cortex_A78.pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).**FVP_Base_Cortex_A78.pctl.timer_reset**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).**FVP_Base_Cortex_A78.pctl.timer_reset.timer**

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).**FVP_Base_Cortex_A78.pctl.timer_reset.timer.thread**A [SchedulerThread](#) instance represents a co-routine thread in the simulation.Type: [SchedulerThread](#).

FVP_Base_Cortex_A78.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.52 FVP_Base_Cortex-A78AE

List of instances in FVP_Base_Cortex-A78AE.

FVP_Base_Cortex-A78AE instances

FVP_Base_Cortex_A78AE

Base Platform Compute Subsystem for ARMCortexA78AECT.

Type: [FVP_Base_Cortex_A78AE](#).

FVP_Base_Cortex_A78AE.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_A78AE.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A78AE.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A78AE.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A78AE.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A78AE.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A78AE.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A78AE.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A78AE.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A78AE.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78AE.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78AE.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78AE.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78AE.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78AE.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A78AE.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A78AE.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A78AE.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A78AE.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A78AE.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A78AE.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A78AE.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78AE.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78AE.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78AE.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78AE.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A78AE.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A78AE.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A78AE.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78AE.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78AE.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78AE.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78AE.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A78AE.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A78AE.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A78AE.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78AE.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78AE.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_A78AE.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78AE.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78AE.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78AE.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78AE.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A78AE.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78AE.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78AE.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78AE.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78AE.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A78AE.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A78AE.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A78AE.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A78AE.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78AE.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78AE.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78AE.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78AE.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A78AE.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A78AE.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A78AE.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78AE.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78AE.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78AE.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78AE.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A78AE.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78AE.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78AE.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78AE.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78AE.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78AE.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A78AE.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A78AE.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78AE.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78AE.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78AE.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78AE.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78AE.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A78AE.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A78AE.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A78AE.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A78AE.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78AE.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78AE.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78AE.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78AE.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A78AE.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78AE.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A78AE.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A78AE.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A78AE.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A78AE.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A78AE.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A78AE.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A78AE.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A78AE.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78AE.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78AE.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78AE.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78AE.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A78AE.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A78AE.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A78AE.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A78AE.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A78AE.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A78AE.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A78AE.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A78AE.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A78AE.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A78AE.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A78AE.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A78AE.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A78AE.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A78AE.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A78AE.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A78AE.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78AE.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78AE.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78AE.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A78AE.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A78C.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A78C.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_A78C.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_A78C.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A78C.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_A78C.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_A78C.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_A78C.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.dmc

Type: [RAMDevice](#).

FVP_Base_Cortex_A78C.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78C.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78C.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78C.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78C.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_A78C.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A78C.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A78C.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A78C.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A78C.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_A78C.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_A78C.bp.hdlcd0.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78C.bp.hdlcd0.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78C.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78C.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78C.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A78C.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_A78C.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_A78C.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78C.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78C.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78C.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78C.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_A78C.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A78C.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A78C.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78C.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A78C.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78C.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78C.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78C.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78C.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A78C.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78C.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78C.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78C.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78C.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A78C.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78C.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78C.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78C.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78C.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_A78C.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78C.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78C.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78C.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78C.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_A78C.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78C.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78C.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78C.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78C.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A78C.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_A78C.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_A78C.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_A78C.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78C.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78C.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78C.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78C.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A78C.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_A78C.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_A78C.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78C.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78C.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78C.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78C.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_A78C.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78C.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78C.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78C.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78C.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78C.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_A78C.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_A78C.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78C.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78C.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78C.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78C.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78C.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_A78C.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_A78C.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_A78C.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A78C.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78C.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78C.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78C.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78C.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_A78C.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78C.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A78C.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A78C.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A78C.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_A78C.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_A78C.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_A78C.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_A78C.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_A78C.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_A78C.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_A78C.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_A78C.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78C.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_A78C.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_A78C.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_A78C.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_A78C.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_A78C.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_A78C.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_A78C.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_A78C.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_A78C.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_A78C.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_A78C.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_A78C.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_A78C.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_A78C.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_A78C.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_A78C.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_A78C.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_A78C.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_A78C.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_A78C.cluster0

ARM Cortex-A78C Cluster CT model.

Type: [Cluster_ARM_Cortex-A78C](#).

FVP_Base_Cortex_A78C.cluster0.DSU.shared_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_A78C.cluster0.cpu0

ARM Cortex-A78C CT model.

Type: [ARM_Cortex-A78C](#).

FVP_Base_Cortex_A78C.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_A78C.cluster0.cpu0.l1dcache

FVP_Base_Cortex_X1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_X1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_X1.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_X1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_X1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_X1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_X1.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_X1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Cortex_X1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_X1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_X1.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_X1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_X1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_X1.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_X1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X1.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_X1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_X1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_X1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_X1.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_X1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_X1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_X1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_X1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_X1.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_X1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_X1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_X1.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X1.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_X1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_X1.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_X1.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X1.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X1.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X1.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_X1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_X1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_X1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_X1.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_X1.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_X1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_X1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_X1.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_X1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_X1.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_X1.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_X1.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_X1.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_X1.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_X1.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_X1.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_X1.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_X1.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_X1.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_X1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_X1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1.cluster0

ARM Cortex-X1 Cluster CT model.

Type: [Cluster_ARM_Cortex-X1](#).

FVP_Base_Cortex_X1.cluster0.DSU.shared_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_X1.cluster0.cpu0

ARM Cortex-X1 CT model.

Type: [ARM_Cortex-X1](#).

FVP_Base_Cortex_X1.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_X1.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_X1.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_X1.cluster0.cpu0.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X1.cluster0.cpu1

ARM Cortex-X1 CT model.

Type: [ARM_Cortex-X1](#).

FVP_Base_Cortex_X1.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X1.cluster0.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X1.cluster0.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X1.cluster0.cpu1.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X1.cluster0.cpu2

ARM Cortex-X1 CT model.

Type: [ARM_Cortex-X1](#).

FVP_Base_Cortex_X1.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X1.cluster0.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X1.cluster0.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X1.cluster0.cpu2.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X1.cluster0.cpu3

ARM Cortex-X1 CT model.

Type: [ARM_Cortex-X1](#).

FVP_Base_Cortex_X1.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X1.cluster0.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X1.cluster0.cpu3.l1icache

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_X1.cluster0.cpu3.l2cache**

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_X1.cluster0_labeller**Type: [Labeller](#).**FVP_Base_Cortex_X1.dapmemlogger**

Bus Logger.

Type: [PVBUSLogger](#).**FVP_Base_Cortex_X1.elfloader**

ELF loader component.

Type: [ElfLoader](#).**FVP_Base_Cortex_X1.gic_distributor**

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).**FVP_Base_Cortex_X1.pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).**FVP_Base_Cortex_X1.pctl.timer_reset**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).**FVP_Base_Cortex_X1.pctl.timer_reset.timer**

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).**FVP_Base_Cortex_X1.pctl.timer_reset.timer.thread**A [SchedulerThread](#) instance represents a co-routine thread in the simulation.Type: [SchedulerThread](#).

FVP_Base_Cortex_X1.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.55 FVP_Base_Cortex-X1C

List of instances in FVP_Base_Cortex-X1C.

FVP_Base_Cortex-X1C instances

FVP_Base_Cortex_X1C

Base Platform Compute Subsystem for ARMCortexX1CCT.

Type: [FVP_Base_Cortex_X1C](#).

FVP_Base_Cortex_X1C.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_X1C.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_X1C.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_X1C.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_X1C.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_X1C.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_X1C.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_X1C.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_X1C.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_X1C.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1C.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1C.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1C.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1C.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1C.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_X1C.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X1C.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X1C.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X1C.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X1C.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_X1C.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_X1C.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1C.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1C.bp.hd1cd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1C.bp.hd1cd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1C.bp.hd1cd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_X1C.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_X1C.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_X1C.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1C.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1C.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1C.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1C.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_X1C.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X1C.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X1C.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1C.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X1C.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1C.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1C.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1C.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1C.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X1C.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1C.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1C.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1C.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1C.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X1C.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1C.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1C.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1C.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1C.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X1C.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1C.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1C.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1C.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1C.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_X1C.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1C.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1C.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1C.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1C.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_X1C.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1C.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1C.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1C.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1C.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_X1C.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_X1C.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_X1C.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_X1C.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1C.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1C.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1C.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1C.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_X1C.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_X1C.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_X1C.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1C.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1C.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1C.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1C.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_X1C.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1C.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1C.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1C.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1C.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1C.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_X1C.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_X1C.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1C.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1C.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1C.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1C.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1C.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X1C.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X1C.bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_Base_Cortex_X1C.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_X1C.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1C.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1C.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1C.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1C.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_X1C.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1C.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X1C.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X1C.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X1C.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X1C.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_X1C.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_X1C.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_X1C.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_X1C.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X1C.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X1C.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X1C.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1C.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_X1C.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_X1C.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_X1C.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_X1C.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_X1C.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_X1C.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_X1C.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_X1C.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_X1C.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_X1C.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_X1C.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_X1C.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_X1C.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_X1C.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_X1C.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_X1C.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X1C.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X1C.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_X1C.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X1C.cluster0

ARM Cortex-X1C Cluster CT model.

Type: [Cluster_ARM_Cortex-X1C](#).

FVP_Base_Cortex_X1C.cluster0.DSU.shared_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_X1C.cluster0.cpu0

ARM Cortex-X1C CT model.

Type: [ARM_Cortex-X1C](#).

FVP_Base_Cortex_X1C.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_X1C.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_X1C.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_X1C.cluster0.cpu0.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X1C.cluster0.cpu1

ARM Cortex-X1C CT model.

Type: [ARM_Cortex-X1C](#).

FVP_Base_Cortex_X1C.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X1C.cluster0.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X1C.cluster0.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X1C.cluster0.cpu1.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X1C.cluster0.cpu2

ARM Cortex-X1C CT model.

Type: [ARM_Cortex-X1C](#).

FVP_Base_Cortex_X1C.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X1C.cluster0.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X1C.cluster0.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X1C.cluster0.cpu2.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X1C.cluster0.cpu3

ARM Cortex-X1C CT model.

Type: [ARM_Cortex-X1C](#).

FVP_Base_Cortex_X1C.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X1C.cluster0.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X1C.cluster0.cpu3.l1icache

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_X1C.cluster0.cpu3.l2cache**

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_X1C.cluster0_labeller**Type: [Labeller](#).**FVP_Base_Cortex_X1C.dapmemlogger**

Bus Logger.

Type: [PVBUSLogger](#).**FVP_Base_Cortex_X1C.elfloader**

ELF loader component.

Type: [ElfLoader](#).**FVP_Base_Cortex_X1C.gic_distributor**

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).**FVP_Base_Cortex_X1C.pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).**FVP_Base_Cortex_X1C.pctl.timer_reset**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).**FVP_Base_Cortex_X1C.pctl.timer_reset.timer**

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).**FVP_Base_Cortex_X1C.pctl.timer_reset.timer.thread**A [SchedulerThread](#) instance represents a co-routine thread in the simulation.Type: [SchedulerThread](#).

FVP_Base_Cortex_X1C.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.56 FVP_Base_Cortex-X2

List of instances in FVP_Base_Cortex-X2.

FVP_Base_Cortex-X2 instances

FVP_Base_Cortex_X2

Base Platform Compute Subsystem for ARMCortexX2CT.

Type: [FVP_Base_Cortex_X2](#).

FVP_Base_Cortex_X2.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_X2.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_X2.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_X2.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_X2.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_X2.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_X2.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_X2.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_X2.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_X2.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X2.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X2.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X2.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X2.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X2.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_X2.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X2.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X2.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X2.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X2.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_X2.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_X2.bp.hdlcd0.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X2.bp.hdlcd0.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X2.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X2.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X2.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_X2.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_X2.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_X2.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X2.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X2.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X2.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X2.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_X2.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X2.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X2.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X2.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X2.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X2.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X2.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X2.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X2.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X2.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X2.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X2.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X2.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X2.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X2.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X2.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X2.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X2.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X2.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X2.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X2.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X2.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X2.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X2.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_X2.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X2.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X2.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X2.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X2.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_X2.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X2.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X2.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X2.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X2.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_X2.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_X2.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_X2.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_X2.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X2.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X2.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_X2.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_X2.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_X2.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X2.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X2.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X2.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X2.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_X2.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X2.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X2.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X2.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X2.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X2.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_X2.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_X2.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X2.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X2.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X2.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X2.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X2.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X2.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X2.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_X2.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_X2.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X2.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X2.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X2.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X2.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_X2.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X2.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X2.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X2.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X2.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X2.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_X2.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_X2.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_X2.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_X2.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X2.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X2.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X2.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X2.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_X2.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_X2.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_X2.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_X2.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_X2.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_X2.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_X2.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_X2.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_X2.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_X2.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_X2.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_X2.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_X2.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_X2.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_X2.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_X2.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X2.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X2.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_X2.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X2.cluster0

ARM Cortex-X2 Cluster CT model.

Type: [Cluster_ARM_Cortex-X2](#).

FVP_Base_Cortex_X2.cluster0.DSU.shared_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_X2.cluster0.cpu0

ARM Cortex-X2 CT model.

Type: [ARM_Cortex-X2](#).

FVP_Base_Cortex_X2.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_X2.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_X2.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Cortex_X2.cluster0.cpu0.l2cache

PV Cache.

Type: `pvcache`.

FVP_Base_Cortex_X2.cluster0.cpu1

ARM Cortex-X2 CT model.

Type: [ARM_Cortex-X2](#).

FVP_Base_Cortex_X2.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

FVP_Base_Cortex_X2.cluster0.cpu1.l1dcache

PV Cache.

Type: `pvcache`.

FVP_Base_Cortex_X2.cluster0.cpu1.l1icache

PV Cache.

Type: `pvcache`.

FVP_Base_Cortex_X2.cluster0.cpu1.l2cache

PV Cache.

Type: `pvcache`.

FVP_Base_Cortex_X2.cluster0.cpu10

ARM Cortex-X2 CT model.

Type: [ARM_Cortex-X2](#).

FVP_Base_Cortex_X2.cluster0.cpu10.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

FVP_Base_Cortex_X2.cluster0.cpu10.l1dcache

PV Cache.

Type: `pvcache`.

FVP_Base_Cortex_X2.cluster0.cpu10.l1icache

PV Cache.

Type: `pvcache`.

FVP_Base_Cortex_X2.cluster0.cpu10.l2cache

PV Cache.

Type: `pvcache`.

FVP_Base_Cortex_X2.cluster0.cpu11

ARM Cortex-X2 CT model.

Type: [ARM_Cortex-X2](#).

FVP_Base_Cortex_X2.cluster0.cpu11.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

FVP_Base_Cortex_X2.cluster0.cpu11.l1dcache

PV Cache.

Type: `pvcache`.

FVP_Base_Cortex_X2.cluster0.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu1.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu2

ARM Cortex-X2 CT model.

Type: [ARM_Cortex-X2](#).**FVP_Base_Cortex_X2.cluster0.cpu2.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X2.cluster0.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu2.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu3

ARM Cortex-X2 CT model.

Type: [ARM_Cortex-X2](#).**FVP_Base_Cortex_X2.cluster0.cpu3.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X2.cluster0.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu3.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu3.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu4

ARM Cortex-X2 CT model.

Type: [ARM_Cortex-X2](#).

FVP_Base_Cortex_X2.cluster0.cpu4.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X2.cluster0.cpu4.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu4.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu4.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu5

ARM Cortex-X2 CT model.

Type: [ARM_Cortex-X2](#).**FVP_Base_Cortex_X2.cluster0.cpu5.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X2.cluster0.cpu5.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu5.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu5.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu6

ARM Cortex-X2 CT model.

Type: [ARM_Cortex-X2](#).**FVP_Base_Cortex_X2.cluster0.cpu6.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X2.cluster0.cpu6.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu6.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu6.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu7

ARM Cortex-X2 CT model.

Type: [ARM_Cortex-X2](#).**FVP_Base_Cortex_X2.cluster0.cpu7.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X2.cluster0.cpu7.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu7.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu7.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu8

ARM Cortex-X2 CT model.

Type: [ARM_Cortex-X2](#).**FVP_Base_Cortex_X2.cluster0.cpu8.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X2.cluster0.cpu8.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu8.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu8.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X2.cluster0.cpu9

ARM Cortex-X2 CT model.

Type: [ARM_Cortex-X2](#).**FVP_Base_Cortex_X2.cluster0.cpu9.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X2.cluster0.cpu9.l1dcache

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_X2.cluster0.cpu9.l1icache**

PV Cache.

Type: [PVCache](#).**FVP_Base_Cortex_X2.cluster0.cpu9.l2cache**

PV Cache.

Bus Logger.

Type: [PVBUSLogger](#).**FVP_Base_Cortex_X2.elfloader**

ELF loader component.

Type: [ElfLoader](#).**FVP_Base_Cortex_X2.gic_distributor**

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).**FVP_Base_Cortex_X2.pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).**FVP_Base_Cortex_X2.pctl.timer_reset**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).**FVP_Base_Cortex_X2.pctl.timer_reset.timer**

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).**FVP_Base_Cortex_X2.pctl.timer_reset.timer.thread**

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X2.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.57 FVP_Base_Cortex-X3

List of instances in FVP_Base_Cortex-X3.

FVP_Base_Cortex-X3 instances

FVP_Base_Cortex_X3

Base Platform Compute Subsystem for ARMCortexX3CT.

Type: [FVP_Base_Cortex_X3](#).

FVP_Base_Cortex_X3.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_X3.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_X3.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_X3.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_X3.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_X3.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_X3.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_X3.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_X3.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_X3.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X3.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X3.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X3.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X3.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X3.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_X3.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X3.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X3.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X3.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X3.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_X3.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_X3.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X3.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X3.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X3.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X3.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_X3.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_X3.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_X3.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X3.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X3.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X3.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X3.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_X3.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X3.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X3.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X3.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X3.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X3.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X3.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X3.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X3.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X3.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X3.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X3.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X3.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X3.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X3.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X3.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X3.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X3.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X3.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X3.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X3.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X3.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X3.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X3.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_X3.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X3.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X3.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X3.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X3.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_X3.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X3.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X3.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X3.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X3.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_X3.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_X3.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_X3.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_X3.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X3.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X3.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X3.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X3.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_X3.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_X3.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_X3.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X3.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X3.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X3.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X3.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_X3.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X3.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X3.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X3.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X3.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X3.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_X3.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_X3.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X3.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X3.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X3.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X3.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X3.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X3.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X3.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_X3.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_X3.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X3.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X3.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X3.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X3.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_X3.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X3.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X3.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X3.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X3.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X3.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_X3.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_X3.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_X3.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_X3.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X3.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X3.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X3.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X3.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_X3.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_X3.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_X3.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_X3.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_X3.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_X3.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_X3.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_X3.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_X3.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_X3.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_X3.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_X3.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_X3.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_X3.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_X3.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_X3.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X3.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X3.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_X3.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X3.cluster0

ARM Cortex-X3 Cluster CT model.

Type: [Cluster_ARM_Cortex-X3](#).

FVP_Base_Cortex_X3.cluster0.DSU.shared_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_X3.cluster0.cpu0

ARM Cortex-X3 CT model.

Type: [ARM_Cortex-X3](#).

FVP_Base_Cortex_X3.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_X3.cluster0.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_X3.cluster0.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_X3.cluster0.cpu0.l2cache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_X3.cluster0.cpu1

ARM Cortex-X3 CT model.

Type: [ARM_Cortex-X3](#).

FVP_Base_Cortex_X3.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

FVP_Base_Cortex_X3.cluster0.cpu1.l1dcache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_X3.cluster0.cpu1.l1icache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_X3.cluster0.cpu1.l2cache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_X3.cluster0.cpu10

ARM Cortex-X3 CT model.

Type: [ARM_Cortex-X3](#).

FVP_Base_Cortex_X3.cluster0.cpu10.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

FVP_Base_Cortex_X3.cluster0.cpu10.l1dcache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_X3.cluster0.cpu10.l1icache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_X3.cluster0.cpu10.l2cache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_X3.cluster0.cpu11

ARM Cortex-X3 CT model.

Type: [ARM_Cortex-X3](#).

FVP_Base_Cortex_X3.cluster0.cpu11.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

FVP_Base_Cortex_X3.cluster0.cpu11.l1dcache

PV Cache.

Type: `pVCache`.

FVP_Base_Cortex_X3.cluster0.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu1.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu2

ARM Cortex-X3 CT model.

Type: [ARM_Cortex-X3](#).**FVP_Base_Cortex_X3.cluster0.cpu2.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X3.cluster0.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu2.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu3

ARM Cortex-X3 CT model.

Type: [ARM_Cortex-X3](#).**FVP_Base_Cortex_X3.cluster0.cpu3.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X3.cluster0.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu3.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu3.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu4

ARM Cortex-X3 CT model.

Type: [ARM_Cortex-X3](#).

FVP_Base_Cortex_X3.cluster0.cpu4.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X3.cluster0.cpu4.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu4.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu4.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu5

ARM Cortex-X3 CT model.

Type: [ARM_Cortex-X3](#).**FVP_Base_Cortex_X3.cluster0.cpu5.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X3.cluster0.cpu5.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu5.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu5.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu6

ARM Cortex-X3 CT model.

Type: [ARM_Cortex-X3](#).**FVP_Base_Cortex_X3.cluster0.cpu6.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X3.cluster0.cpu6.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu6.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu6.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu7

ARM Cortex-X3 CT model.

Type: [ARM_Cortex-X3](#).**FVP_Base_Cortex_X3.cluster0.cpu7.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X3.cluster0.cpu7.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu7.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu7.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X3.cluster0.cpu8

ARM Cortex-X3 CT model.

Type: [ARM_Cortex-X3](#).**FVP_Base_Cortex_X3.cluster0.cpu8.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X3.cluster0.cpu8.l1dcache

PV Cache.

Type: pVCache.

ELF loader component.

Type: [ElfLoader](#).**FVP_Base_Cortex_X3.gic_distributor**

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).**FVP_Base_Cortex_X3.pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).**FVP_Base_Cortex_X3.pctl.timer_reset**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).**FVP_Base_Cortex_X3.pctl.timer_reset.timer**

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).**FVP_Base_Cortex_X3.pctl.timer_reset.timer.thread**A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X3.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.58 FVP_Base_Cortex-X4

List of instances in FVP_Base_Cortex-X4.

FVP_Base_Cortex-X4 instances

FVP_Base_Cortex_X4

Base Platform Compute Subsystem for ARMCortexX4CT.

Type: [FVP_Base_Cortex_X4](#).

FVP_Base_Cortex_X4.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Cortex_X4.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_X4.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_X4.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Cortex_X4.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Cortex_X4.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_X4.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Cortex_X4.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Cortex_X4.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Cortex_X4.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X4.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X4.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X4.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X4.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X4.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Cortex_X4.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X4.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X4.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X4.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X4.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Cortex_X4.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Cortex_X4.bp.hdlcd0.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X4.bp.hdlcd0.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X4.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X4.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X4.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_X4.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Cortex_X4.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Cortex_X4.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X4.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X4.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X4.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X4.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Cortex_X4.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X4.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X4.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X4.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X4.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X4.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X4.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X4.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X4.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X4.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X4.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X4.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X4.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X4.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X4.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X4.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X4.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X4.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X4.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Cortex_X4.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X4.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X4.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X4.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X4.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Cortex_X4.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X4.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X4.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X4.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X4.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Cortex_X4.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X4.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X4.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X4.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X4.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_X4.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Cortex_X4.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Cortex_X4.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Cortex_X4.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X4.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X4.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Cortex_X4.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Cortex_X4.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Cortex_X4.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X4.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X4.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X4.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X4.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Cortex_X4.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X4.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X4.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X4.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X4.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X4.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Cortex_X4.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Cortex_X4.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X4.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X4.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X4.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X4.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X4.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Cortex_X4.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Cortex_X4.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Cortex_X4.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_X4.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X4.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X4.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X4.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X4.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Cortex_X4.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X4.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X4.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X4.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X4.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Cortex_X4.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Cortex_X4.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Cortex_X4.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Cortex_X4.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Cortex_X4.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X4.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X4.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X4.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X4.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Cortex_X4.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Cortex_X4.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Cortex_X4.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Cortex_X4.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Cortex_X4.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Cortex_X4.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Cortex_X4.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Cortex_X4.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Cortex_X4.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Cortex_X4.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Cortex_X4.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Cortex_X4.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Cortex_X4.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Cortex_X4.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Cortex_X4.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Cortex_X4.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Cortex_X4.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Cortex_X4.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Cortex_X4.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Cortex_X4.cluster0

ARM Cortex-X4 Cluster CT model.

Type: [Cluster_ARM_Cortex-X4](#).

FVP_Base_Cortex_X4.cluster0.DSU.shared_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_X4.cluster0.cpu0

ARM Cortex-X4 CT model.

Type: [ARM_Cortex-X4](#).

FVP_Base_Cortex_X4.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Cortex_X4.cluster0.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_X4.cluster0.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Cortex_X4.cluster0.cpu0.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu1

ARM Cortex-X4 CT model.

Type: [ARM_Cortex-X4](#).

FVP_Base_Cortex_X4.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X4.cluster0.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu1.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu10

ARM Cortex-X4 CT model.

Type: [ARM_Cortex-X4](#).

FVP_Base_Cortex_X4.cluster0.cpu10.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X4.cluster0.cpu10.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu10.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu10.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu11

ARM Cortex-X4 CT model.

Type: [ARM_Cortex-X4](#).

FVP_Base_Cortex_X4.cluster0.cpu11.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X4.cluster0.cpu11.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu11.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu11.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu12

ARM Cortex-X4 CT model.

Type: [ARM_Cortex-X4](#).**FVP_Base_Cortex_X4.cluster0.cpu12.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X4.cluster0.cpu12.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu12.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu12.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu13

ARM Cortex-X4 CT model.

Type: [ARM_Cortex-X4](#).**FVP_Base_Cortex_X4.cluster0.cpu13.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X4.cluster0.cpu13.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu13.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu13.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu2

ARM Cortex-X4 CT model.

Type: [ARM_Cortex-X4](#).

FVP_Base_Cortex_X4.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X4.cluster0.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu2.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu3

ARM Cortex-X4 CT model.

Type: [ARM_Cortex-X4](#).**FVP_Base_Cortex_X4.cluster0.cpu3.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X4.cluster0.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu3.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu3.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu4

ARM Cortex-X4 CT model.

Type: [ARM_Cortex-X4](#).**FVP_Base_Cortex_X4.cluster0.cpu4.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X4.cluster0.cpu4.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu4.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu4.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu5

ARM Cortex-X4 CT model.

Type: [ARM_Cortex-X4](#).**FVP_Base_Cortex_X4.cluster0.cpu5.dtlb**

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_X4.cluster0.cpu5.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu5.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu5.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu6

ARM Cortex-X4 CT model.

Type: [ARM_Cortex-X4](#).**FVP_Base_Cortex_X4.cluster0.cpu6.dtlb**

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Cortex_X4.cluster0.cpu9

ARM Cortex-X4 CT model.

Type: [ARM_Cortex-X4](#).

FVP_Base_Cortex_X4.cluster0.cpu9.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Cortex_X4.cluster0.cpu9.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu9.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0.cpu9.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Cortex_X4.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Cortex_X4.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Cortex_X4.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Cortex_X4.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Cortex_X4.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Cortex_X4.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Cortex_X4.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Cortex_X4.pctl.timer_reset.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Cortex_X4.pctl.timer_reset.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.59 FVP_Base_Neoverse-E1

List of instances in FVP_Base_Neoverse-E1.

FVP_Base_Neoverse-E1 instances

FVP_Base_Neoverse_E1

Base Platform Compute Subsystem for ARMNeoverseE1CT.

Type: `FVP_Base_Neoverse_E1`.

FVP_Base_Neoverse_E1.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Neoverse_E1.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Neoverse_E1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Neoverse_E1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Neoverse_E1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Neoverse_E1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Neoverse_E1.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Neoverse_E1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Neoverse_E1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Neoverse_E1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Neoverse_E1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Neoverse_E1.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Neoverse_E1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_E1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_E1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_E1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_E1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_E1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Neoverse_E1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_E1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_E1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_E1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_E1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Neoverse_E1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Neoverse_E1.bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_E1.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_E1.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_E1.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_E1.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_E1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Neoverse_E1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Neoverse_E1.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_E1.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_E1.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_E1.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_E1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Neoverse_E1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_E1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_E1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_E1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_E1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_E1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_E1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_E1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_E1.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_E1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_E1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_E1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_E1.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_E1.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_E1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_E1.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_E1.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_E1.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_E1.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_E1.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_E1.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_E1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_E1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_E1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Neoverse_E1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_E1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_E1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_E1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_E1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Neoverse_E1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_E1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_E1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_E1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_E1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Neoverse_E1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Neoverse_E1.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Neoverse_E1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Neoverse_E1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_E1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_E1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_E1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_E1.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_E1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Neoverse_E1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Neoverse_E1.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_E1.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_E1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_E1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_E1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Neoverse_E1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_E1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_E1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_E1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_E1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_E1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Neoverse_E1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Neoverse_E1.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_E1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_E1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_E1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_E1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_E1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_E1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_E1.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Neoverse_E1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Neoverse_E1.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_E1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_E1.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_E1.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_E1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Neoverse_E1.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_E1.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_E1.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_E1.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_E1.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_E1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Neoverse_E1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Neoverse_E1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Neoverse_E1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Neoverse_E1.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_E1.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_E1.bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_E1.bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_E1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Neoverse_E1.bp.ve_sysregs

Type: `VE_SysRegs`.

FVP_Base_Neoverse_E1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

FVP_Base_Neoverse_E1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Neoverse_E1.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_E1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

FVP_Base_Neoverse_E1.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `VirtioBlockMMIO`.

FVP_Base_Neoverse_E1.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_E1.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Neoverse_E1.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_E1.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Neoverse_E1.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Neoverse_E1.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_E1.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_E1.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_E1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_E1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_E1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Neoverse_E1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_E1.cluster0

ARM Neoverse-E1 Cluster CT model.

Type: [cluster_ARM_Neoverse-E1](#).

FVP_Base_Neoverse_E1.cluster0.DSU.shared_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Neoverse_E1.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Neoverse_E1.cluster0.cpu0.thread0

ARM Neoverse-E1 CT model.

Type: [ARM_Neoverse-E1](#).

FVP_Base_Neoverse_E1.cluster0.cpu0.thread1

ARM Neoverse-E1 CT model.

Type: [ARM_Neoverse-E1](#).

FVP_Base_Neoverse_E1.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Neoverse_E1.cluster0.cpu1.thread0

ARM Neoverse-E1 CT model.

Type: [ARM_Neoverse-E1](#).

FVP_Base_Neoverse_E1.cluster0.cpu1.thread1

ARM Neoverse-E1 CT model.

Type: [ARM_Neoverse-E1](#).

FVP_Base_Neoverse_E1.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Neoverse_E1.cluster0.cpu2.thread0

ARM Neoverse-E1 CT model.

Type: [ARM_Neoverse-E1](#).

FVP_Base_Neoverse_E1.cluster0.cpu2.thread1

ARM Neoverse-E1 CT model.

Type: [ARM_Neoverse-E1](#).

FVP_Base_Neoverse_E1.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Neoverse_E1.cluster0.cpu3.thread0

ARM Neoverse-E1 CT model.

Type: [ARM_Neoverse-E1](#).

FVP_Base_Neoverse_E1.cluster0.cpu3.thread1

ARM Neoverse-E1 CT model.

Type: [ARM_Neoverse-E1](#).

FVP_Base_Neoverse_E1.cluster0.cpu4.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Neoverse_E1.cluster0.cpu4.thread0

ARM Neoverse-E1 CT model.

Type: [ARM_Neoverse-E1](#).

FVP_Base_Neoverse_E1.cluster0.cpu4.thread1

ARM Neoverse-E1 CT model.

Type: [ARM_Neoverse-E1](#).

FVP_Base_Neoverse_E1.cluster0.cpu5.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Neoverse_E1.cluster0.cpu5.thread0

ARM Neoverse-E1 CT model.

Type: [ARM_Neoverse-E1](#).

FVP_Base_Neoverse_E1.cluster0.cpu5.thread1

ARM Neoverse-E1 CT model.

Type: [ARM_Neoverse-E1](#).

FVP_Base_Neoverse_E1.cluster0.cpu6.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Neoverse_E1.cluster0.cpu6.thread0

ARM Neoverse-E1 CT model.

Type: [ARM_Neoverse-E1](#).

FVP_Base_Neoverse_E1.cluster0.cpu6.thread1

ARM Neoverse-E1 CT model.

Type: [ARM_Neoverse-E1](#).

FVP_Base_Neoverse_E1.cluster0.cpu7.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_Base_Neoverse_E1.cluster0.cpu7.thread0

ARM Neoverse-E1 CT model.

Type: [ARM_Neoverse-E1](#).

FVP_Base_Neoverse_E1.cluster0.cpu7.thread1

ARM Neoverse-E1 CT model.

Type: [ARM_Neoverse-E1](#).

FVP_Base_Neoverse_E1.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_E1.dapmemlogger

Bus Logger.

Type: [PVBUSLogger](#).

FVP_Base_Neoverse_E1.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Neoverse_E1.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Neoverse_E1.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Neoverse_E1.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_E1.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_E1.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_E1.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.60 FVP_Base_Neoverse-N1

List of instances in FVP_Base_Neoverse-N1.

FVP_Base_Neoverse-N1 instances

FVP_Base_Neoverse_N1

Base Platform Compute Subsystem for ARMNeoverseN1CT.

Type: [FVP_Base_Neoverse_N1](#).

FVP_Base_Neoverse_N1.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Neoverse_N1.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Neoverse_N1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Neoverse_N1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Neoverse_N1.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Neoverse_N1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Neoverse_N1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Neoverse_N1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Neoverse_N1.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Neoverse_N1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Neoverse_N1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_N1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_N1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_N1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_N1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Neoverse_N1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Neoverse_N1.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N1.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N1.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N1.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N1.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_N1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Neoverse_N1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Neoverse_N1.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N1.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N1.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N1.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Neoverse_N1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_N1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_N1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_N1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N1.bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_N1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N1.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N1.bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_N1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N1.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N1.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N1.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N1.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_N1.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N1.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Neoverse_N1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Neoverse_N1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Neoverse_N1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Neoverse_N1.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Neoverse_N1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Neoverse_N1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N1.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_N1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Neoverse_N1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Neoverse_N1.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N1.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Neoverse_N1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Neoverse_N1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Neoverse_N1.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_N1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_N1.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Neoverse_N1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Neoverse_N1.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N1.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N1.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Neoverse_N1.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N1.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_N1.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_N1.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_N1.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_N1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Neoverse_N1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Neoverse_N1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Neoverse_N1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Neoverse_N1.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N1.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N1.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N1.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Neoverse_N1.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Neoverse_N1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Neoverse_N1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Neoverse_N1.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_N1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Neoverse_N1.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Neoverse_N1.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Neoverse_N1.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Neoverse_N1.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Neoverse_N1.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Neoverse_N1.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Neoverse_N1.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Neoverse_N1.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Neoverse_N1.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Neoverse_N1.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Neoverse_N1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Neoverse_N1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N1.cluster0

ARM Neoverse-N1 Cluster CT model.

Type: [Cluster_ARM_Neoverse-N1](#).

Type: [GIC_IRI](#).**FVP_Base_Neoverse_N1.pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).**FVP_Base_Neoverse_N1.pctl.timer_reset**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).**FVP_Base_Neoverse_N1.pctl.timer_reset.timer**

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).**FVP_Base_Neoverse_N1.pctl.timer_reset.timer.thread**A [SchedulerThread](#) instance represents a co-routine thread in the simulation.Type: [SchedulerThread](#).

FVP_Base_Neoverse_N1.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.61 FVP_Base_Neoverse-N2

List of instances in FVP_Base_Neoverse-N2.

FVP_Base_Neoverse-N2 instances

FVP_Base_Neoverse_N2

Base Platform Compute Subsystem for ARMNeoverseN2CT.

Type: [FVP_Base_Neoverse_N2](#).

FVP_Base_Neoverse_N2.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Neoverse_N2.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Neoverse_N2.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Neoverse_N2.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Neoverse_N2.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Neoverse_N2.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Neoverse_N2.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Neoverse_N2.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Neoverse_N2.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Neoverse_N2.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Neoverse_N2.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_N2.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_N2.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_N2.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_N2.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Neoverse_N2.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Neoverse_N2.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_N2.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Neoverse_N2.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Neoverse_N2.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Neoverse_N2.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_N2.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_N2.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_N2.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2.bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_N2.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2.bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_N2.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_N2.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Neoverse_N2.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Neoverse_N2.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Neoverse_N2.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Neoverse_N2.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Neoverse_N2.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Neoverse_N2.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_N2.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Neoverse_N2.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Neoverse_N2.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Neoverse_N2.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Neoverse_N2.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Neoverse_N2.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_N2.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_N2.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Neoverse_N2.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Neoverse_N2.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Neoverse_N2.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_N2.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_N2.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_N2.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_N2.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Neoverse_N2.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Neoverse_N2.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Neoverse_N2.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Neoverse_N2.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Neoverse_N2.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Neoverse_N2.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Neoverse_N2.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Neoverse_N2.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_N2.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Neoverse_N2.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Neoverse_N2.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Neoverse_N2.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Neoverse_N2.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Neoverse_N2.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Neoverse_N2.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Neoverse_N2.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Neoverse_N2.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Neoverse_N2.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Neoverse_N2.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Neoverse_N2.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Neoverse_N2.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2.cluster0

ARM Neoverse-N2 Cluster CT model.

Type: [Cluster_ARM_Neoverse-N2](#).

FVP_Base_Neoverse_N2.cluster0.DSU.shared_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Neoverse_N2.cluster0.cpu0

ARM Neoverse-N2 CT model.

Type: [ARM_Neoverse-N2](#).

FVP_Base_Neoverse_N2.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Neoverse_N2.cluster0.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Neoverse_N2.cluster0.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Neoverse_N2.cluster0.cpu0.l2cache

PV Cache.

Type: `PVCache`.

FVP_Base_Neoverse_N2.cluster0_labeller

Type: `Labeller`.

FVP_Base_Neoverse_N2.dapmemlogger

Bus Logger.

Type: `PVBusLogger`.

FVP_Base_Neoverse_N2.elfloader

ELF loader component.

Type: `ElfLoader`.

FVP_Base_Neoverse_N2.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: `GIC_IRI`.

FVP_Base_Neoverse_N2.pctl

Base Platforms Power Controller.

Type: `Base_PowerController`.

FVP_Base_Neoverse_N2.pctl.timer_reset

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Neoverse_N2.pctl.timer_reset.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Neoverse_N2.pctl.timer_reset.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Neoverse_N2.pctl.timer_reset.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

13.62 FVP_Base_Neoverse-N2x1-Neoverse-N2x1

List of instances in FVP_Base_Neoverse-N2x1-Neoverse-N2x1.

FVP_Base_Neoverse-N2x1-Neoverse-N2x1 instances

FVP_Base_Neoverse_N2x1_Neoverse_N2x1

Base Platform Compute Subsystem for ARMNeoverseN2x1CT and ARMNeoverseN2x1CT.

Type: `FVP_Base_Neoverse_N2x1_Neoverse_N2x1`.

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.hd1cd0_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.ve_sysregs

Type: `VE_SysRegs`.

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `VirtioBlockMMIO`.

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.cluster0

ARM Neoverse-N2 Cluster CT model.

Type: [cluster_ARM_Neoverse-N2](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.cluster0.DSU.shared_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.cluster0.cpu0

ARM Neoverse-N2 CT model.

Type: [ARM_Neoverse-N2](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.cluster0.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.cluster0.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.cluster0.cpu0.l2cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.cluster1

ARM Neoverse-N2 Cluster CT model.

Type: [cluster_ARM_Neoverse-N2](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.cluster1.DSU.shared_cache

PV Cache.

Type: [PVCache](#).**FVP_Base_Neoverse_N2x1_Neoverse_N2x1.cluster1.cpu0**

ARM Neoverse-N2 CT model.

Type: [ARM_Neoverse-N2](#).**FVP_Base_Neoverse_N2x1_Neoverse_N2x1.cluster1.cpu0.dtlb**

TLB - instruction, data or unified.

Type: [Tlbcadi](#).**FVP_Base_Neoverse_N2x1_Neoverse_N2x1.cluster1.cpu0.l1dcache**

PV Cache.

Type: [PVCache](#).**FVP_Base_Neoverse_N2x1_Neoverse_N2x1.cluster1.cpu0.l1icache**

PV Cache.

Type: [PVCache](#).**FVP_Base_Neoverse_N2x1_Neoverse_N2x1.cluster1.cpu0.l2cache**

PV Cache.

Type: [PVCache](#).**FVP_Base_Neoverse_N2x1_Neoverse_N2x1.cluster1.labeller**Type: [Labeller](#).**FVP_Base_Neoverse_N2x1_Neoverse_N2x1.dapmemlogger**

Bus Logger.

Type: [PVBusLogger](#).**FVP_Base_Neoverse_N2x1_Neoverse_N2x1.elfloader**

ELF loader component.

Type: [ElfLoader](#).**FVP_Base_Neoverse_N2x1_Neoverse_N2x1.gic_distributor**

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).**FVP_Base_Neoverse_N2x1_Neoverse_N2x1.pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).**FVP_Base_Neoverse_N2x1_Neoverse_N2x1.pctl1.timer_reset**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_N2x1_Neoverse_N2x1.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.63 FVP_Base_Neoverse-V1

List of instances in FVP_Base_Neoverse-V1.

FVP_Base_Neoverse-V1 instances

FVP_Base_Neoverse_V1

Base Platform Compute Subsystem for ARMNeoverseV1CT.

Type: [FVP_Base_Neoverse_V1](#).

FVP_Base_Neoverse_V1.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Neoverse_V1.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Neoverse_V1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Neoverse_V1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Neoverse_V1.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Neoverse_V1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Neoverse_V1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Neoverse_V1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Neoverse_V1.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Neoverse_V1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_Base_Neoverse_V1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_V1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_V1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_V1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_V1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Neoverse_V1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_Base_Neoverse_V1.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V1.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V1.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V1.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V1.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_V1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Neoverse_V1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Neoverse_V1.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V1.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V1.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V1.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Neoverse_V1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_V1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_V1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_V1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V1.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_V1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V1.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V1.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_V1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V1.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V1.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V1.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V1.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_V1.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V1.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Neoverse_V1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Neoverse_V1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Neoverse_V1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Neoverse_V1.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Neoverse_V1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Neoverse_V1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V1.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_V1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Neoverse_V1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Neoverse_V1.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V1.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Neoverse_V1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Neoverse_V1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Neoverse_V1.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_V1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_V1.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Neoverse_V1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Neoverse_V1.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V1.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V1.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Neoverse_V1.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V1.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_V1.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_V1.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_V1.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_V1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Neoverse_V1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Neoverse_V1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Neoverse_V1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Neoverse_V1.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V1.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V1.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V1.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Neoverse_V1.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Neoverse_V1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Neoverse_V1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Neoverse_V1.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_V1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `virtioEntropyMMIO`.

FVP_Base_Neoverse_V1.bp.virtioBlockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Neoverse_V1.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Neoverse_V1.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Neoverse_V1.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Neoverse_V1.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Neoverse_V1.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Neoverse_V1.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Neoverse_V1.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Neoverse_V1.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Neoverse_V1.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Neoverse_V1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V1.cluster0

ARM Neoverse-V1 Cluster CT model.

Type: [cluster_ARM_Neoverse-V1](#).

FVP_Base_Neoverse_V1.cluster0.DSU.shared_cache

PV Cache.

Type: [pVCache](#).

FVP_Base_Neoverse_V1.cluster0.cpu0

ARM Neoverse-V1 CT model.

Type: [ARM_Neoverse-V1](#).

FVP_Base_Neoverse_V1.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_Neoverse_V1.cluster0.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_Neoverse_V1.cluster0.cpu0.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Neoverse_V1.cluster0.cpu0.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Neoverse_V1.cluster0.cpu1

ARM Neoverse-V1 CT model.

Type: [ARM_Neoverse-V1](#).

FVP_Base_Neoverse_V1.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Neoverse_V1.cluster0.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Neoverse_V1.cluster0.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Neoverse_V1.cluster0.cpu1.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Neoverse_V1.cluster0.cpu2

ARM Neoverse-V1 CT model.

Type: [ARM_Neoverse-V1](#).

FVP_Base_Neoverse_V1.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Neoverse_V1.cluster0.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_Neoverse_V1.cluster0.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_Neoverse_V1.cluster0.cpu2.l2cache

PV Cache.

Type: pVCache.

FVP_Base_Neoverse_V1.cluster0.cpu3

ARM Neoverse-V1 CT model.

Type: [ARM_Neoverse-V1](#).

FVP_Base_Neoverse_V1.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_Neoverse_V1.cluster0.cpu3.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_Base_Neoverse_V1.cluster0.cpu3.l1icache

PV Cache.

Type: [PVCache](#).

FVP_Base_Neoverse_V1.cluster0.cpu3.l2cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Neoverse_V1.cluster0_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_V1.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_Neoverse_V1.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_Neoverse_V1.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Neoverse_V1.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Neoverse_V1.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V1.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V1.pctl.timer_reset.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V1.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.64 FVP_Base_Neoverse-V2x1-Neoverse-V2x1

List of instances in FVP_Base_Neoverse-V2x1-Neoverse-V2x1.

FVP_Base_Neoverse-V2x1-Neoverse-V2x1 instances

FVP_Base_Neoverse_V2x1_Neoverse_V2x1

Base Platform Compute Subsystem for ARMNeoverseV2x1CT and ARMNeoverseV2x1CT.

Type: [FVP_Base_Neoverse_V2x1_Neoverse_V2x1](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.telnet_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.telnet_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.telnet_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.telnet_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.cluster0

ARM Neoverse-V2 Cluster CT model.

Type: [Cluster_ARM_Neoverse-V2](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.cluster0.DSU.shared_cache

PV Cache.

Type: [PVCache](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.cluster0.cpu0

ARM Neoverse-V2 CT model.

Type: [ARM_Neoverse-V2](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [Tlbcadi](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.cluster0.cpu0.l1dcache

PV Cache.

Type: `pvcache`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.cluster0.cpu0.l1icache

PV Cache.

Type: `pvcache`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.cluster0.cpu0.l2cache

PV Cache.

Type: `pvcache`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.cluster0_labeller

Type: `Labeller`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.cluster1

ARM Neoverse-V2 Cluster CT model.

Type: `cluster_ARM_Neoverse-V2`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.cluster1.DSU.shared_cache

PV Cache.

Type: `pvcache`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.cluster1.cpu0

ARM Neoverse-V2 CT model.

Type: `ARM_Neoverse-V2`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: `tlbcadi`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.cluster1.cpu0.l1dcache

PV Cache.

Type: `pvcache`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.cluster1.cpu0.l1icache

PV Cache.

Type: `pvcache`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.cluster1.cpu0.l2cache

PV Cache.

Type: `pvcache`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.cluster1_labeller

Type: `Labeller`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.dapmemlogger

Bus Logger.

Type: `PVBusLogger`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.elfloader

ELF loader component.

Type: `ElfLoader`.

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_Neoverse_V2x1_Neoverse_V2x1.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

13.65 FVP_Base_RevC-2xAEMvA

List of instances in FVP_Base_RevC-2xAEMvA.

FVP_Base_RevC-2xAEMvA instances

FVP_Base_RevC_2xAEMvA

Base Platform Compute Subsystem for AEMvACT and AEMvACT.

Type: [FVP_Base_RevC_2xAEMvA](#).

FVP_Base_RevC_2xAEMvA.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_Base_RevC_2xAEMvA.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_RevC_2xAEMvA.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_RevC_2xAEMvA.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_RevC_2xAEMvA.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_Base_RevC_2xAEMvA.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_RevC_2xAEMvA.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_Base_RevC_2xAEMvA.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_Base_RevC_2xAEMvA.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_Base_RevC_2xAEMvA.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_RevC_2xAEMvA.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_RevC_2xAEMvA.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_RevC_2xAEMvA.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_RevC_2xAEMvA.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_RevC_2xAEMvA.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_Base_RevC_2xAEMvA.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_RevC_2xAEMvA.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_RevC_2xAEMvA.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_RevC_2xAEMvA.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_RevC_2xAEMvA.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_Base_RevC_2xAEMvA.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_Base_RevC_2xAEMvA.bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_RevC_2xAEMvA.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_RevC_2xAEMvA.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_RevC_2xAEMvA.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_RevC_2xAEMvA.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_Base_RevC_2xAEMvA.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_Base_RevC_2xAEMvA.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_Base_RevC_2xAEMvA.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_RevC_2xAEMvA.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_RevC_2xAEMvA.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_RevC_2xAEMvA.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_RevC_2xAEMvA.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_Base_RevC_2xAEMvA.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_RevC_2xAEMvA.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_RevC_2xAEMvA.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_RevC_2xAEMvA.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_RevC_2xAEMvA.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_Base_RevC_2xAEMvA.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_RevC_2xAEMvA.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_RevC_2xAEMvA.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_RevC_2xAEMvA.bp.pl031_rtc.timer.timer.thread.event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_RevC_2xAEMvA.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_Base_RevC_2xAEMvA.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_RevC_2xAEMvA.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_RevC_2xAEMvA.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_RevC_2xAEMvA.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_RevC_2xAEMvA.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_RevC_2xAEMvA.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_Base_RevC_2xAEMvA.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_Base_RevC_2xAEMvA.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_Base_RevC_2xAEMvA.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_RevC_2xAEMvA.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_RevC_2xAEMvA.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_RevC_2xAEMvA.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_RevC_2xAEMvA.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_Base_RevC_2xAEMvA.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_Base_RevC_2xAEMvA.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_Base_RevC_2xAEMvA.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_RevC_2xAEMvA.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_RevC_2xAEMvA.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_RevC_2xAEMvA.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_RevC_2xAEMvA.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_Base_RevC_2xAEMvA.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_RevC_2xAEMvA.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_RevC_2xAEMvA.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_RevC_2xAEMvA.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_RevC_2xAEMvA.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_RevC_2xAEMvA.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_Base_RevC_2xAEMvA.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_Base_RevC_2xAEMvA.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_RevC_2xAEMvA.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_RevC_2xAEMvA.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_RevC_2xAEMvA.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_RevC_2xAEMvA.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_RevC_2xAEMvA.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_Base_RevC_2xAEMvA.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_Base_RevC_2xAEMvA.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_Base_RevC_2xAEMvA.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_RevC_2xAEMvA.bp.sp805_wdog.clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_Base_RevC_2xAEMvA.bp.sp805_wdog.clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_Base_RevC_2xAEMvA.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_RevC_2xAEMvA.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_RevC_2xAEMvA.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_Base_RevC_2xAEMvA.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_RevC_2xAEMvA.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_RevC_2xAEMvA.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_RevC_2xAEMvA.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_RevC_2xAEMvA.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_Base_RevC_2xAEMvA.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_Base_RevC_2xAEMvA.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_Base_RevC_2xAEMvA.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_Base_RevC_2xAEMvA.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_Base_RevC_2xAEMvA.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_RevC_2xAEMvA.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_RevC_2xAEMvA.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_RevC_2xAEMvA.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_RevC_2xAEMvA.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).**FVP_Base_RevC_2xAEMvA.bp.ve_sysregs**Type: [VE_SysRegs](#).**FVP_Base_RevC_2xAEMvA.bp.vedcc**

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).**FVP_Base_RevC_2xAEMvA.bp.virtio_net**

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).**FVP_Base_RevC_2xAEMvA.bp.virtio_net_labeller**Type: [Labeller](#).**FVP_Base_RevC_2xAEMvA.bp.virtio_rng**

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).**FVP_Base_RevC_2xAEMvA.bp.virtio_blockdevice**

VirtioBlock device over MMIO transport.

Type: [VirtioBlockMMIO](#).**FVP_Base_RevC_2xAEMvA.bp.virtio_blockdevice_labeller**Type: [Labeller](#).**FVP_Base_RevC_2xAEMvA.bp.virtio_p9device**

virtio P9 server.

Type: [VirtioP9Device](#).**FVP_Base_RevC_2xAEMvA.bp.virtio_p9device_labeller**Type: [Labeller](#).**FVP_Base_RevC_2xAEMvA.bp.vis**

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).**FVP_Base_RevC_2xAEMvA.bp.vis.recorder**

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).**FVP_Base_RevC_2xAEMvA.bp.vis.recorder.playbackDivider**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_RevC_2xAEMvA.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_RevC_2xAEMvA.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_RevC_2xAEMvA.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_RevC_2xAEMvA.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_Base_RevC_2xAEMvA.cci550

This is a cache coherent interconnect.

Type: [CCI550](#).

FVP_Base_RevC_2xAEMvA.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_Base_RevC_2xAEMvA.cluster0

ARM AEMvA Cluster CT model.

Type: [cluster_ARM_AEM-A_MP](#).

FVP_Base_RevC_2xAEMvA.cluster0.cpu0

ARM AEM-A MP CT model.

Type: [ARM_AEM-A_MP](#).

FVP_Base_RevC_2xAEMvA.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_RevC_2xAEMvA.cluster0.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_RevC_2xAEMvA.cluster0.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_RevC_2xAEMvA.cluster0.cpu1

ARM AEM-A MP CT model.

Type: [ARM_AEM-A_MP](#).

FVP_Base_RevC_2xAEMvA.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_RevC_2xAEMvA.cluster0.cpu1.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_Base_RevC_2xAEMvA.cluster0.cpu1.l1icache

PV Cache.

Type: [pVCache](#).

FVP_Base_RevC_2xAEMvA.cluster0.cpu2

ARM AEM-A MP CT model.

Type: [ARM_AEM-A_MP](#).

FVP_Base_RevC_2xAEMvA.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_Base_RevC_2xAEMvA.cluster0.cpu2.l1dcache

PV Cache.

Type: `pvcache`.

FVP_Base_RevC_2xAEMvA.cluster0.cpu2.l1icache

PV Cache.

Type: `pvcache`.

FVP_Base_RevC_2xAEMvA.cluster0.cpu3

ARM AEM-A MP CT model.

Type: `ARM_AEM-A_MP`.

FVP_Base_RevC_2xAEMvA.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: `tlbcadi`.

FVP_Base_RevC_2xAEMvA.cluster0.cpu3.l1dcache

PV Cache.

Type: `pvcache`.

FVP_Base_RevC_2xAEMvA.cluster0.cpu3.l1icache

PV Cache.

Type: `pvcache`.

FVP_Base_RevC_2xAEMvA.cluster0.l2_cache

PV Cache.

Type: `pvcache`.

FVP_Base_RevC_2xAEMvA.cluster0_labeller

Type: `Labeller`.

FVP_Base_RevC_2xAEMvA.cluster1

ARM AEMvA Cluster CT model.

Type: `Cluster_ARM_AEM-A_MP`.

FVP_Base_RevC_2xAEMvA.cluster1.cpu0

ARM AEM-A MP CT model.

Type: `ARM_AEM-A_MP`.

FVP_Base_RevC_2xAEMvA.cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: `tlbcadi`.

FVP_Base_RevC_2xAEMvA.cluster1.cpu0.l1dcache

PV Cache.

Type: `pvcache`.

FVP_Base_RevC_2xAEMvA.cluster1.cpu0.l1icache

PV Cache.

Type: `pvcache`.

FVP_Base_RevC_2xAEMvA.cluster1.cpu1

ARM AEM-A MP CT model.

Type: `ARM_AEM-A_MP`.

FVP_Base_RevC_2xAEMvA.cluster1.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_RevC_2xAEMvA.cluster1.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_RevC_2xAEMvA.cluster1.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_Base_RevC_2xAEMvA.cluster1.cpu2

ARM AEM-A MP CT model.

Type: [ARM_AEM-A_MP](#).**FVP_Base_RevC_2xAEMvA.cluster1.cpu2.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_RevC_2xAEMvA.cluster1.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_RevC_2xAEMvA.cluster1.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_Base_RevC_2xAEMvA.cluster1.cpu3

ARM AEM-A MP CT model.

Type: [ARM_AEM-A_MP](#).**FVP_Base_RevC_2xAEMvA.cluster1.cpu3.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_Base_RevC_2xAEMvA.cluster1.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_Base_RevC_2xAEMvA.cluster1.cpu3.l1icache

PV Cache.

Type: pVCache.

FVP_Base_RevC_2xAEMvA.cluster1.l2_cache

PV Cache.

Type: pVCache.

FVP_Base_RevC_2xAEMvA.cluster1_labellerType: [Labeller](#).**FVP_Base_RevC_2xAEMvA.dapmemlogger**

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_RevC_2xAEMvA.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_Base_RevC_2xAEMvA.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_Base_RevC_2xAEMvA.gpu

G76 addon for the Base Platform.

Type: [G76_DB](#).

FVP_Base_RevC_2xAEMvA.gpu.gpu

ARM Mali-G76 GPU.

Type: [Mali_G76](#).

FVP_Base_RevC_2xAEMvA.pci

PCI addon for the Base Platform.

Type: [BasePlatformPCISBSA](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4

Type: [DMA330x4](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac0

ARM PrimeCell DMA Controller(PL330).

Type: [PL330_DMACE](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac1

ARM PrimeCell DMA Controller(PL330).

Type: [PL330_DMACH](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac2

ARM PrimeCell DMA Controller(PL330).

Type: [PL330_DMACH](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac3

ARM PrimeCell DMA Controller(PL330).

Type: [PL330_DMACE](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.dmac3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_RevC_2xAEMvA.pci.dma330x4.smmuv3testengine

SMMUv3 Test Engine.

Type: [SMMUv3TestEngine](#).**FVP_Base_RevC_2xAEMvA.pci.pci_smmuv3**

System MMUv3 configured for PCI-E Sub-system.

Type: [SMMUv3_FOR_PCIE](#).**FVP_Base_RevC_2xAEMvA.pci.pci_smmuv3.mmu**

SMMUv3 AEM.

Type: [SMMUv3AEM](#).**FVP_Base_RevC_2xAEMvA.pci.pci_smmuv3.msirewriter**

Recognise writes to the GITS_TRANSLATER register and rewrite them to go to the GITS_TRANSLATE64R register. The DeviceID is expected to be in the bottom 32 bits of ExtendedID of the transaction. Debug transactions and reads are not rewritten. This component can also, optionally, apply a 16 bit 'label' to the top 16 bits of the MasterID in the same way that the Labeller component does.

Type: [MSIRewriter](#).**FVP_Base_RevC_2xAEMvA.pci.pcie_rc**

PCleRootComplex.

Type: [PCIERootComplex](#).**FVP_Base_RevC_2xAEMvA.pci.pcie_rc.ahci0.endpoint**

PCleEndpoint.

Type: [PCIEEndpoint](#).**FVP_Base_RevC_2xAEMvA.pci.pcie_rc.rootport0**

PCleBridge.

Type: [PCIEBridge](#).**FVP_Base_RevC_2xAEMvA.pci.pcie_rc.rootport1**

PCleBridge.

Type: [PCIEBridge](#).**FVP_Base_RevC_2xAEMvA.pci.pcie_rc.rootport2**

PCleBridge.

Type: [PCIEBridge](#).**FVP_Base_RevC_2xAEMvA.pci.pcie_rc.rootport3**

PCleBridge.

Type: [PCIEBridge](#).**FVP_Base_RevC_2xAEMvA.pci.pcie_rc.smmuv3testengine0.endpoint**

PCleEndpoint.

Type: [PCIEEndpoint](#).**FVP_Base_RevC_2xAEMvA.pci.pcie_rc.smmuv3testengine0.smmuv3testengine**

SMMUv3 Test Engine.

Type: [SMMUv3TestEngine](#).

FVP_Base_RevC_2xAEMvA.pci.pcie_rc.smmuv3testengine1.endpoint

PCIEEndpoint.

Type: PCIEEndpoint.

FVP_Base_RevC_2xAEMvA.pci.pcie_rc.smmuv3testengine1.smmuv3testengine

SMMUv3 Test Engine.

Type: [SMMUv3TestEngine](#).

FVP_Base_RevC_2xAEMvA.pci.pcie_rc.smmuv3testengine2.endpoint

PCIEEndpoint.

Type: PCIEEndpoint.

FVP_Base_RevC_2xAEMvA.pci.pcie_rc.smmuv3testengine2.smmuv3testengine

SMMUv3 Test Engine.

Type: [SMMUv3TestEngine](#).

FVP_Base_RevC_2xAEMvA.pci.pcie_rc.smmuv3testengine3.endpoint

PCIEEndpoint.

Type: PCIEEndpoint.

FVP_Base_RevC_2xAEMvA.pci.pcie_rc.smmuv3testengine3.smmuv3testengine

SMMUv3 Test Engine.

Type: [SMMUv3TestEngine](#).

FVP_Base_RevC_2xAEMvA.pci.pcie_rc.smmuv3testengine4.endpoint

PCIEEndpoint.

Type: PCIEEndpoint.

FVP_Base_RevC_2xAEMvA.pci.pcie_rc.smmuv3testengine4.smmuv3testengine

SMMUv3 Test Engine.

Type: [SMMUv3TestEngine](#).

FVP_Base_RevC_2xAEMvA.pci.pcie_rc.smmuv3testengine5.endpoint

PCIEEndpoint.

Type: PCIEEndpoint.

FVP_Base_RevC_2xAEMvA.pci.pcie_rc.smmuv3testengine5.smmuv3testengine

SMMUv3 Test Engine.

Type: [SMMUv3TestEngine](#).

PCIEEndpoint.

Type: PCIEEndpoint.

FVP_Base_RevC_2xAEMvA.pci.pcie_rc.smmuv3testengine6.smmuv3testengine

SMMUv3 Test Engine.

Type: [SMMUv3TestEngine](#).

FVP_Base_RevC_2xAEMvA.pci.pcie_rc.smmuv3testengine7.endpoint

PCIEEndpoint.

Type: PCIEEndpoint.

FVP_Base_RevC_2xAEMvA.pci.pcie_rc.smmuv3testengine7.smmuv3testengine

SMMUv3 Test Engine.

Type: [SMMUv3TestEngine](#).

FVP_Base_RevC_2xAEMvA.pci.pcie_rc.smmuv3testengine8.endpoint

PCleEndpoint.

Type: [PCIEEndpoint](#).

FVP_Base_RevC_2xAEMvA.pci.pcie_rc.smmuv3testengine8.smmuv3testengine

SMMUv3 Test Engine.

Type: [SMMUv3TestEngine](#).

FVP_Base_RevC_2xAEMvA.pci.pcie_rc.smmuv3testengine9.endpoint

PCleEndpoint.

Type: [PCIEEndpoint](#).

FVP_Base_RevC_2xAEMvA.pci.pcie_rc.smmuv3testengine9.smmuv3testengine

SMMUv3 Test Engine.

Type: [SMMUv3TestEngine](#).

FVP_Base_RevC_2xAEMvA.pci.smmulogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_RevC_2xAEMvA.pci.tbu0_pre_smmu_logger

Bus Logger.

Type: [PVBusLogger](#).

FVP_Base_RevC_2xAEMvA.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_Base_RevC_2xAEMvA.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_Base_RevC_2xAEMvA.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_Base_RevC_2xAEMvA.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_Base_RevC_2xAEMvA.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_Base_RevC_2xAEMvA.test_engine

Test Engine for base platform.

Type: [TestEngine](#).

FVP_Base_RevC_2xAEMvA.test_engine.device0

SMMUv3 Test Engine.

Type: [SMMUv3TestEngine](#).

14. BaseR Platform FVPs

This chapter describes the BaseR Platform FVPs contained in the FVP Standard Library.

For the BaseR Platform memory map, see [BaseR Platform memory map](#) in the *Fast Models Reference Guide*.

14.1 FVP_BaseR_Cortex-R52Plus

List of instances in FVP_BaseR_Cortex-R52Plus.

FVP_BaseR_Cortex-R52Plus instances

FVP_BaseR_Cortex_R52Plus

Base Platform Compute Subsystem for ARM Cortex R52PlusCT.

Type: `FVP_BaseR_Cortex_R52Plus`.

FVP_BaseR_Cortex_R52Plus.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_BaseR_Cortex_R52Plus.bp.Timer_0_1

ARM Dual-Timer Module (SP804).

Type: `SP804_Timer`.

FVP_BaseR_Cortex_R52Plus.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R52Plus.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R52Plus.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_BaseR_Cortex_R52Plus.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_BaseR_Cortex_R52Plus.bp.Timer_2_3

ARM Dual-Timer Module (SP804).

Type: [SP804_Timer](#).

FVP_BaseR_Cortex_R52Plus.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_BaseR_Cortex_R52Plus.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_BaseR_Cortex_R52Plus.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_BaseR_Cortex_R52Plus.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_BaseR_Cortex_R52Plus.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52Plus.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52Plus.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52Plus.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52Plus.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52Plus.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_BaseR_Cortex_R52Plus.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R52Plus.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R52Plus.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R52Plus.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R52Plus.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_BaseR_Cortex_R52Plus.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_BaseR_Cortex_R52Plus.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52Plus.bp.hd1cd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.hd1cd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52Plus.bp.hd1cd0_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R52Plus.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_BaseR_Cortex_R52Plus.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_BaseR_Cortex_R52Plus.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52Plus.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52Plus.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_BaseR_Cortex_R52Plus.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R52Plus.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R52Plus.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52Plus.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_BaseR_Cortex_R52Plus.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52Plus.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52Plus.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_BaseR_Cortex_R52Plus.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52Plus.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52Plus.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_BaseR_Cortex_R52Plus.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_BaseR_Cortex_R52Plus.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_BaseR_Cortex_R52Plus.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_BaseR_Cortex_R52Plus.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52Plus.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52Plus.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R52Plus.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_BaseR_Cortex_R52Plus.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_BaseR_Cortex_R52Plus.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52Plus.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52Plus.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_BaseR_Cortex_R52Plus.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52Plus.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52Plus.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52Plus.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_BaseR_Cortex_R52Plus.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_BaseR_Cortex_R52Plus.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52Plus.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52Plus.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52Plus.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52Plus.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52Plus.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R52Plus.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R52Plus.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_BaseR_Cortex_R52Plus.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_BaseR_Cortex_R52Plus.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52Plus.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52Plus.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_BaseR_Cortex_R52Plus.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52Plus.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R52Plus.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R52Plus.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R52Plus.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R52Plus.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_BaseR_Cortex_R52Plus.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_BaseR_Cortex_R52Plus.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_BaseR_Cortex_R52Plus.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_BaseR_Cortex_R52Plus.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52Plus.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52Plus.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52Plus.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_BaseR_Cortex_R52Plus.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_BaseR_Cortex_R52Plus.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_BaseR_Cortex_R52Plus.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_BaseR_Cortex_R52Plus.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R52Plus.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_BaseR_Cortex_R52Plus.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_BaseR_Cortex_R52Plus.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_BaseR_Cortex_R52Plus.bp.virtiop9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_BaseR_Cortex_R52Plus.bp.virtiop9device_labeller

Type: `Labeller`.

FVP_BaseR_Cortex_R52Plus.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_BaseR_Cortex_R52Plus.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_BaseR_Cortex_R52Plus.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R52Plus.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_BaseR_Cortex_R52Plus.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_BaseR_Cortex_R52Plus.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_BaseR_Cortex_R52Plus.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52Plus.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52Plus.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_BaseR_Cortex_R52Plus.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52Plus.cluster0

ARM Cortex-R52Plus Cluster CT model.

Type: [Cluster_ARM_Cortex-R52Plus](#).

FVP_BaseR_Cortex_R52Plus.cluster0.cpu0

ARM Cortex-R52Plus CT model.

Type: [ARM_Cortex-R52Plus](#).

FVP_BaseR_Cortex_R52Plus.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_BaseR_Cortex_R52Plus.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R52Plus.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R52Plus.cluster0.cpu1

ARM Cortex-R52Plus CT model.

Type: [ARM_Cortex-R52Plus](#).

FVP_BaseR_Cortex_R52Plus.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

FVP_BaseR_Cortex_R52Plus.cluster0.cpu1.l1dcache

PV Cache.

Type: `PVCache`.

FVP_BaseR_Cortex_R52Plus.cluster0.cpu1.l1icache

PV Cache.

Type: `PVCache`.

FVP_BaseR_Cortex_R52Plus.cluster0.cpu2

ARM Cortex-R52Plus CT model.

Type: `ARM_Cortex-R52Plus`.

FVP_BaseR_Cortex_R52Plus.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

FVP_BaseR_Cortex_R52Plus.cluster0.cpu2.l1dcache

PV Cache.

Type: `PVCache`.

FVP_BaseR_Cortex_R52Plus.cluster0.cpu2.l1icache

PV Cache.

Type: `PVCache`.

FVP_BaseR_Cortex_R52Plus.cluster0.cpu3

ARM Cortex-R52Plus CT model.

Type: `ARM_Cortex-R52Plus`.

FVP_BaseR_Cortex_R52Plus.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

FVP_BaseR_Cortex_R52Plus.cluster0.cpu3.l1dcache

PV Cache.

Type: `PVCache`.

FVP_BaseR_Cortex_R52Plus.cluster0.cpu3.l1icache

PV Cache.

Type: `PVCache`.

FVP_BaseR_Cortex_R52Plus.cluster0.gic_iri

GIC IRI internal to cluster.

Type: `gic_iri`.

FVP_BaseR_Cortex_R52Plus.cluster0.labeller

Type: `Labeller`.

FVP_BaseR_Cortex_R52Plus.dapmemlogger

Bus Logger.

Type: `PVBusLogger`.

FVP_BaseR_Cortex_R52Plus.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_BaseR_Cortex_R52Plus.flash_ram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52Plus.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_BaseR_Cortex_R52Plus.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52Plus.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52Plus.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52Plus.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

14.2 FVP_BaseR_Cortex-R52x1

List of instances in FVP_BaseR_Cortex-R52x1.

FVP_BaseR_Cortex-R52x1 instances

FVP_BaseR_Cortex_R52x1

Base Platform Compute Subsystem for ARMCortexR52x1CT.

Type: [FVP_BaseR_Cortex_R52x1](#).

FVP_BaseR_Cortex_R52x1.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_BaseR_Cortex_R52x1.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_BaseR_Cortex_R52x1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R52x1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R52x1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_BaseR_Cortex_R52x1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_BaseR_Cortex_R52x1.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_BaseR_Cortex_R52x1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R52x1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R52x1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_BaseR_Cortex_R52x1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_BaseR_Cortex_R52x1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_BaseR_Cortex_R52x1.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_BaseR_Cortex_R52x1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_BaseR_Cortex_R52x1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R52x1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R52x1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R52x1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R52x1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_BaseR_Cortex_R52x1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_BaseR_Cortex_R52x1.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x1.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x1.bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x1.bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x1.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R52x1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_BaseR_Cortex_R52x1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_BaseR_Cortex_R52x1.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x1.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x1.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x1.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_BaseR_Cortex_R52x1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R52x1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R52x1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_BaseR_Cortex_R52x1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_BaseR_Cortex_R52x1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_BaseR_Cortex_R52x1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_BaseR_Cortex_R52x1.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_BaseR_Cortex_R52x1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_BaseR_Cortex_R52x1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x1.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R52x1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_BaseR_Cortex_R52x1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked `PS2Data` signals which can be routed to a `PL050_KMI` component.

Type: [PS2Keyboard](#).

FVP_BaseR_Cortex_R52x1.bp.ps2keyboard.ps2_clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x1.bp.ps2keyboard.ps2_clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_BaseR_Cortex_R52x1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_BaseR_Cortex_R52x1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_BaseR_Cortex_R52x1.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R52x1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R52x1.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_BaseR_Cortex_R52x1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_BaseR_Cortex_R52x1.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_BaseR_Cortex_R52x1.bp.sp805_wdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_BaseR_Cortex_R52x1.bp.sp805_wdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_BaseR_Cortex_R52x1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

FVP_BaseR_Cortex_R52x1.bp.sp810_sysctrl.clkdiv_clk0

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R52x1.bp.sp810_sysctrl.clkdiv_clk1

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R52x1.bp.sp810_sysctrl.clkdiv_clk2

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R52x1.bp.sp810_sysctrl.clkdiv_clk3

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R52x1.bp.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_BaseR_Cortex_R52x1.bp.telnet_0

Telnet terminal interface.

Type: `TelnetTerminal`.

FVP_BaseR_Cortex_R52x1.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R52x1.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R52x1.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R52x1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_BaseR_Cortex_R52x1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_BaseR_Cortex_R52x1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_BaseR_Cortex_R52x1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_BaseR_Cortex_R52x1.bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x1.bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x1.bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x1.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_BaseR_Cortex_R52x1.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_BaseR_Cortex_R52x1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_BaseR_Cortex_R52x1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_BaseR_Cortex_R52x1.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R52x1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_BaseR_Cortex_R52x1.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [VirtioBlockMMIO](#).

FVP_BaseR_Cortex_R52x1.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R52x1.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_BaseR_Cortex_R52x1.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R52x1.bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_BaseR_Cortex_R52x1.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_BaseR_Cortex_R52x1.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x1.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x1.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x1.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_BaseR_Cortex_R52x1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x1.cluster0

ARM CortexR52 MP Cluster CT model.

Type: [cluster_ARM_Cortex-R52](#).

FVP_BaseR_Cortex_R52x1.cluster0.cpu0

ARM CortexR52 MP CT model.

Type: [ARM_CortexR52](#).

FVP_BaseR_Cortex_R52x1.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_BaseR_Cortex_R52x1.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R52x1.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R52x1.cluster0.gic_iri

GIC IRI internal to cluster.

Type: [gic_iri](#).

FVP_BaseR_Cortex_R52x1.cluster0.labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R52x1.dapmemlogger

Bus Logger.

Type: [PVBUSLogger](#).

FVP_BaseR_Cortex_R52x1.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_BaseR_Cortex_R52x1.flash_ram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x1.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_BaseR_Cortex_R52x1.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x1.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x1.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x1.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

14.3 FVP_BaseR_Cortex-R52x2

List of instances in FVP_BaseR_Cortex-R52x2.

FVP_BaseR_Cortex-R52x2 instances

FVP_BaseR_Cortex_R52x2

Base Platform Compute Subsystem for ARMCortexR52x2CT.

Type: [FVP_BaseR_Cortex_R52x2](#).

FVP_BaseR_Cortex_R52x2.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_BaseR_Cortex_R52x2.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_BaseR_Cortex_R52x2.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_BaseR_Cortex_R52x2.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_BaseR_Cortex_R52x2.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_BaseR_Cortex_R52x2.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_BaseR_Cortex_R52x2.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_BaseR_Cortex_R52x2.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_BaseR_Cortex_R52x2.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_BaseR_Cortex_R52x2.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x2.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x2.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x2.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x2.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x2.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_BaseR_Cortex_R52x2.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R52x2.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R52x2.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R52x2.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R52x2.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_BaseR_Cortex_R52x2.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_BaseR_Cortex_R52x2.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x2.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x2.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x2.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x2.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R52x2.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_BaseR_Cortex_R52x2.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_BaseR_Cortex_R52x2.bp.mmc.timer.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x2.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x2.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x2.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x2.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_BaseR_Cortex_R52x2.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R52x2.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R52x2.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x2.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x2.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_BaseR_Cortex_R52x2.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x2.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x2.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x2.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x2.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_BaseR_Cortex_R52x2.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x2.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x2.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x2.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x2.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_BaseR_Cortex_R52x2.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_BaseR_Cortex_R52x2.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_BaseR_Cortex_R52x2.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_BaseR_Cortex_R52x2.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x2.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x2.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R52x2.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_BaseR_Cortex_R52x2.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_BaseR_Cortex_R52x2.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x2.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x2.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x2.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x2.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_BaseR_Cortex_R52x2.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x2.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x2.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x2.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x2.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x2.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_BaseR_Cortex_R52x2.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_BaseR_Cortex_R52x2.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x2.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x2.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x2.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x2.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x2.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R52x2.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R52x2.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_BaseR_Cortex_R52x2.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_BaseR_Cortex_R52x2.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x2.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x2.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x2.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x2.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_BaseR_Cortex_R52x2.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x2.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R52x2.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R52x2.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R52x2.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R52x2.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_BaseR_Cortex_R52x2.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_BaseR_Cortex_R52x2.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_BaseR_Cortex_R52x2.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_BaseR_Cortex_R52x2.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x2.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x2.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x2.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x2.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_BaseR_Cortex_R52x2.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_BaseR_Cortex_R52x2.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_BaseR_Cortex_R52x2.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_BaseR_Cortex_R52x2.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R52x2.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `virtioEntropyMMIO`.

FVP_BaseR_Cortex_R52x2.bp.virtioBlockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_BaseR_Cortex_R52x2.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_BaseR_Cortex_R52x2.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_BaseR_Cortex_R52x2.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_BaseR_Cortex_R52x2.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_BaseR_Cortex_R52x2.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_BaseR_Cortex_R52x2.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R52x2.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_BaseR_Cortex_R52x2.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_BaseR_Cortex_R52x2.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x2.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x2.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x2.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_BaseR_Cortex_R52x2.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x2.cluster0

ARM CortexR52 MP Cluster CT model.

Type: [Cluster_ARM_Cortex-R52](#).

FVP_BaseR_Cortex_R52x2.cluster0.cpu0

ARM CortexR52 MP CT model.

Type: [ARM_CortexR52](#).

FVP_BaseR_Cortex_R52x2.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_BaseR_Cortex_R52x2.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R52x2.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R52x2.cluster0.cpu1

ARM CortexR52 MP CT model.

Type: [ARM_CortexR52](#).

FVP_BaseR_Cortex_R52x2.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_BaseR_Cortex_R52x2.cluster0.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R52x2.cluster0.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R52x2.cluster0.gic_iri

GIC IRI internal to cluster.

Type: [gic_iri](#).

FVP_BaseR_Cortex_R52x2.cluster0_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R52x2.dapmemlogger

Bus Logger.

Type: [PVBUSLogger](#).

FVP_BaseR_Cortex_R52x2.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_BaseR_Cortex_R52x2.flash_ram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x2.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_BaseR_Cortex_R52x2.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x2.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x2.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x2.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

14.4 FVP_BaseR_Cortex-R52x4

List of instances in FVP_BaseR_Cortex-R52x4.

FVP_BaseR_Cortex-R52x4 instances

FVP_BaseR_Cortex_R52x4

Base Platform Compute Subsystem for ARMCortexR52x4CT.

Type: [FVP_BaseR_Cortex_R52x4](#).

FVP_BaseR_Cortex_R52x4.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_BaseR_Cortex_R52x4.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_BaseR_Cortex_R52x4.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_BaseR_Cortex_R52x4.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_BaseR_Cortex_R52x4.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_BaseR_Cortex_R52x4.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_BaseR_Cortex_R52x4.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_BaseR_Cortex_R52x4.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_BaseR_Cortex_R52x4.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_BaseR_Cortex_R52x4.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x4.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x4.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x4.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x4.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x4.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_BaseR_Cortex_R52x4.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R52x4.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R52x4.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R52x4.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R52x4.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_BaseR_Cortex_R52x4.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_BaseR_Cortex_R52x4.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x4.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x4.bp.hd1cd0.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x4.bp.hd1cd0.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x4.bp.hd1cd0_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R52x4.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_BaseR_Cortex_R52x4.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_BaseR_Cortex_R52x4.bp.mmc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x4.bp.mmc.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x4.bp.mmc.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x4.bp.mmc.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x4.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_BaseR_Cortex_R52x4.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R52x4.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R52x4.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x4.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x4.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_BaseR_Cortex_R52x4.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x4.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x4.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x4.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x4.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_BaseR_Cortex_R52x4.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x4.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x4.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x4.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x4.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_BaseR_Cortex_R52x4.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_BaseR_Cortex_R52x4.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_BaseR_Cortex_R52x4.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_BaseR_Cortex_R52x4.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x4.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x4.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R52x4.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_BaseR_Cortex_R52x4.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_BaseR_Cortex_R52x4.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x4.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x4.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x4.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x4.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_BaseR_Cortex_R52x4.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x4.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x4.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x4.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x4.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x4.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_BaseR_Cortex_R52x4.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_BaseR_Cortex_R52x4.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x4.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x4.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x4.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x4.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x4.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R52x4.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R52x4.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_BaseR_Cortex_R52x4.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_BaseR_Cortex_R52x4.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x4.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x4.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x4.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x4.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_BaseR_Cortex_R52x4.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x4.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R52x4.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R52x4.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R52x4.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R52x4.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_BaseR_Cortex_R52x4.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_BaseR_Cortex_R52x4.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_BaseR_Cortex_R52x4.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_BaseR_Cortex_R52x4.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x4.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x4.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x4.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x4.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_BaseR_Cortex_R52x4.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_BaseR_Cortex_R52x4.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_BaseR_Cortex_R52x4.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_BaseR_Cortex_R52x4.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R52x4.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_BaseR_Cortex_R52x4.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_BaseR_Cortex_R52x4.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_BaseR_Cortex_R52x4.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_BaseR_Cortex_R52x4.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_BaseR_Cortex_R52x4.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_BaseR_Cortex_R52x4.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_BaseR_Cortex_R52x4.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R52x4.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_BaseR_Cortex_R52x4.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_BaseR_Cortex_R52x4.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_BaseR_Cortex_R52x4.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R52x4.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x4.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_BaseR_Cortex_R52x4.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R52x4.cluster0

ARM CortexR52 MP Cluster CT model.

Type: [Cluster_ARM_Cortex-R52](#).

FVP_BaseR_Cortex_R52x4.cluster0.cpu0

ARM CortexR52 MP CT model.

Type: [ARM_CortexR52](#).

FVP_BaseR_Cortex_R52x4.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_BaseR_Cortex_R52x4.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R52x4.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R52x4.cluster0.cpu1

ARM CortexR52 MP CT model.

Type: [ARM_CortexR52](#).

FVP_BaseR_Cortex_R52x4.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_BaseR_Cortex_R52x4.cluster0.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R52x4.cluster0.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R52x4.cluster0.cpu2

ARM CortexR52 MP CT model.

Type: [ARM_CortexR52](#).

FVP_BaseR_Cortex_R52x4.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_BaseR_Cortex_R52x4.cluster0.cpu2.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R52x4.cluster0.cpu2.l1icache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R52x4.cluster0.cpu3

ARM CortexR52 MP CT model.

Type: [ARM_CortexR52](#).

FVP_BaseR_Cortex_R52x4.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_BaseR_Cortex_R52x4.cluster0.cpu3.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R52x4.cluster0.cpu3.l1icache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R52x4.cluster0.gic_iri

GIC IRI internal to cluster.

Type: [gic_iri](#).

FVP_BaseR_Cortex_R52x4.cluster0.labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R52x4.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_BaseR_Cortex_R52x4.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_BaseR_Cortex_R52x4.flash_ram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R52x4.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_BaseR_Cortex_R52x4.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R52x4.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R52x4.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R52x4.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

14.5 FVP_BaseR_Cortex-R82R1

List of instances in FVP_BaseR_Cortex-R82R1.

FVP_BaseR_Cortex-R82R1 instances

FVP_BaseR_Cortex_R82R1

Base Platform Compute Subsystem for ARMCortexR82CT.

Type: [FVP_BaseR_Cortex_R82R1](#).

FVP_BaseR_Cortex_R82R1.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_BaseR_Cortex_R82R1.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_BaseR_Cortex_R82R1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R82R1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R82R1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_BaseR_Cortex_R82R1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_BaseR_Cortex_R82R1.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_BaseR_Cortex_R82R1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R82R1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R82R1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_BaseR_Cortex_R82R1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_BaseR_Cortex_R82R1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_BaseR_Cortex_R82R1.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_BaseR_Cortex_R82R1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82R1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82R1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82R1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82R1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82R1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82R1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82R1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82R1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82R1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82R1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82R1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82R1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82R1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_BaseR_Cortex_R82R1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R82R1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R82R1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R82R1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R82R1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_BaseR_Cortex_R82R1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_BaseR_Cortex_R82R1.bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82R1.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82R1.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82R1.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82R1.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R82R1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_BaseR_Cortex_R82R1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_BaseR_Cortex_R82R1.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82R1.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82R1.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82R1.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82R1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_BaseR_Cortex_R82R1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R82R1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R82R1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82R1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82R1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_BaseR_Cortex_R82R1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82R1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82R1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82R1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82R1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_BaseR_Cortex_R82R1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82R1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82R1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82R1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82R1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_BaseR_Cortex_R82R1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82R1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_BaseR_Cortex_R82R1.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82R1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_BaseR_Cortex_R82R1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_BaseR_Cortex_R82R1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82R1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82R1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82R1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82R1.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R82R1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_BaseR_Cortex_R82R1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked `PS2Data` signals which can be routed to a `PL050_KMI` component.

Type: [PS2Keyboard](#).

FVP_BaseR_Cortex_R82R1.bp.ps2keyboard.ps2_clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82R1.bp.ps2keyboard.ps2_clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82R1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82R1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82R1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_BaseR_Cortex_R82R1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82R1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82R1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82R1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82R1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82R1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_BaseR_Cortex_R82R1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_BaseR_Cortex_R82R1.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82R1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82R1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82R1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82R1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82R1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R82R1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R82R1.bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_BaseR_Cortex_R82R1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_BaseR_Cortex_R82R1.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82R1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_BaseR_Cortex_R82R1.bp.sp805_wdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_BaseR_Cortex_R82R1.bp.sp805_wdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_BaseR_Cortex_R82R1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

FVP_BaseR_Cortex_R82R1.bp.sp810_sysctrl.clkdiv_clk0

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R82R1.bp.sp810_sysctrl.clkdiv_clk1

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R82R1.bp.sp810_sysctrl.clkdiv_clk2

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R82R1.bp.sp810_sysctrl.clkdiv_clk3

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R82R1.bp.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_BaseR_Cortex_R82R1.bp.telnet_0

Telnet terminal interface.

Type: `TelnetTerminal`.

FVP_BaseR_Cortex_R82R1.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R82R1.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R82R1.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R82R1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_BaseR_Cortex_R82R1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_BaseR_Cortex_R82R1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_BaseR_Cortex_R82R1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_BaseR_Cortex_R82R1.bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82R1.bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82R1.bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82R1.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82R1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_BaseR_Cortex_R82R1.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_BaseR_Cortex_R82R1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_BaseR_Cortex_R82R1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_BaseR_Cortex_R82R1.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R82R1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_BaseR_Cortex_R82R1.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [VirtioBlockMMIO](#).

FVP_BaseR_Cortex_R82R1.bp.virtio_blockdevice_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R82R1.bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_BaseR_Cortex_R82R1.bp.virtio_p9device_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R82R1.bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_BaseR_Cortex_R82R1.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_BaseR_Cortex_R82R1.bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82R1.bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82R1.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82R1.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82R1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82R1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82R1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82R1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_BaseR_Cortex_R82R1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82R1.cluster0

ARM Cortex-R82 Cluster CT model.

Type: [cluster_ARM_Cortex-R82](#).

FVP_BaseR_Cortex_R82R1.cluster0.cpu0

ARM Cortex-R82 CT model.

Type: [ARM_Cortex-R82](#).

FVP_BaseR_Cortex_R82R1.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_BaseR_Cortex_R82R1.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R82R1.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R82R1.cluster0.cpu1

ARM Cortex-R82 CT model.

Type: [ARM_Cortex-R82](#).

FVP_BaseR_Cortex_R82R1.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_BaseR_Cortex_R82R1.cluster0.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R82R1.cluster0.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R82R1.cluster0.cpu2

ARM Cortex-R82 CT model.

Type: [ARM_Cortex-R82](#).

FVP_BaseR_Cortex_R82R1.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_BaseR_Cortex_R82R1.cluster0.cpu2.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R82R1.cluster0.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_BaseR_Cortex_R82R1.cluster0.cpu3

ARM Cortex-R82 CT model.

Type: [ARM_Cortex-R82](#).

FVP_BaseR_Cortex_R82R1.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_BaseR_Cortex_R82R1.cluster0.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_BaseR_Cortex_R82R1.cluster0.cpu3.l1icache

PV Cache.

Type: pVCache.

Bus Logger.

Type: [pVBusLogger](#).**FVP_BaseR_Cortex_R82R1.elfloader**

ELF loader component.

Type: [ElfLoader](#).**FVP_BaseR_Cortex_R82R1.gic_distributor**

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).**FVP_BaseR_Cortex_R82R1.l1ram0**

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).**FVP_BaseR_Cortex_R82R1.pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_BaseR_Cortex_R82R1.pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82R1.pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82R1.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82R1.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

14.6 FVP_BaseR_Cortex-R82x1

List of instances in FVP_BaseR_Cortex-R82x1.

FVP_BaseR_Cortex-R82x1 instances

FVP_BaseR_Cortex_R82x1

Base Platform Compute Subsystem for ARMCortexR82x1CT.

Type: [FVP_BaseR_Cortex_R82x1](#).

FVP_BaseR_Cortex_R82x1.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_BaseR_Cortex_R82x1.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_BaseR_Cortex_R82x1.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_BaseR_Cortex_R82x1.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_BaseR_Cortex_R82x1.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_BaseR_Cortex_R82x1.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_BaseR_Cortex_R82x1.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_BaseR_Cortex_R82x1.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_BaseR_Cortex_R82x1.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_BaseR_Cortex_R82x1.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x1.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x1.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x1.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x1.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x1.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_BaseR_Cortex_R82x1.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R82x1.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R82x1.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R82x1.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R82x1.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_BaseR_Cortex_R82x1.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_BaseR_Cortex_R82x1.bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x1.bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x1.bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x1.bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x1.bp.hdlcd0_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R82x1.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_BaseR_Cortex_R82x1.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_BaseR_Cortex_R82x1.bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x1.bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x1.bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x1.bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x1.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_BaseR_Cortex_R82x1.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R82x1.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R82x1.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x1.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x1.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_BaseR_Cortex_R82x1.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x1.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x1.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x1.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x1.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_BaseR_Cortex_R82x1.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x1.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x1.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x1.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x1.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_BaseR_Cortex_R82x1.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_BaseR_Cortex_R82x1.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_BaseR_Cortex_R82x1.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_BaseR_Cortex_R82x1.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x1.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x1.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x1.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R82x1.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_BaseR_Cortex_R82x1.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_BaseR_Cortex_R82x1.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x1.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x1.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x1.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x1.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Mouse](#).

FVP_BaseR_Cortex_R82x1.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x1.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x1.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x1.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x1.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x1.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_BaseR_Cortex_R82x1.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_BaseR_Cortex_R82x1.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x1.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x1.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x1.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x1.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x1.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R82x1.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R82x1.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_BaseR_Cortex_R82x1.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_BaseR_Cortex_R82x1.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x1.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x1.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x1.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x1.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_BaseR_Cortex_R82x1.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x1.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R82x1.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R82x1.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R82x1.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R82x1.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_BaseR_Cortex_R82x1.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_BaseR_Cortex_R82x1.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_BaseR_Cortex_R82x1.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_BaseR_Cortex_R82x1.bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x1.bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x1.bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x1.bp.trusted_watchdog.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x1.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_BaseR_Cortex_R82x1.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_BaseR_Cortex_R82x1.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

FVP_BaseR_Cortex_R82x1.bp.virtio_net

VirtioNet device over MMIO transport.

Type: `VirtioNetMMIO`.

FVP_BaseR_Cortex_R82x1.bp.virtio_net_labeller

Type: `Labeller`.

FVP_BaseR_Cortex_R82x1.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

FVP_BaseR_Cortex_R82x1.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `VirtioBlockMMIO`.

FVP_BaseR_Cortex_R82x1.bp.virtio_blockdevice_labeller

Type: `Labeller`.

FVP_BaseR_Cortex_R82x1.bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_BaseR_Cortex_R82x1.bp.virtio_p9device_labeller

Type: `Labeller`.

FVP_BaseR_Cortex_R82x1.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_BaseR_Cortex_R82x1.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_BaseR_Cortex_R82x1.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R82x1.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x1.bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x1.bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x1.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x1.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x1.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_BaseR_Cortex_R82x1.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x1.cluster0

ARM Cortex-R82 Cluster CT model.

Type: [cluster_ARM_Cortex-R82](#).

FVP_BaseR_Cortex_R82x1.cluster0.cpu0

ARM Cortex-R82 CT model.

Type: [ARM_Cortex-R82](#).

FVP_BaseR_Cortex_R82x1.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_BaseR_Cortex_R82x1.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R82x1.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R82x1.cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R82x1.cluster0.labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R82x1.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_BaseR_Cortex_R82x1.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_BaseR_Cortex_R82x1.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_BaseR_Cortex_R82x1.l1ram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x1.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_BaseR_Cortex_R82x1.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x1.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_BaseR_Cortex_R82x1.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_BaseR_Cortex_R82x1.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

14.7 FVP_BaseR_Cortex-R82x2

List of instances in FVP_BaseR_Cortex-R82x2.

FVP_BaseR_Cortex-R82x2 instances

FVP_BaseR_Cortex_R82x2

Base Platform Compute Subsystem for ARMCortexR82x2CT.

Type: `FVP_BaseR_Cortex_R82x2`.

FVP_BaseR_Cortex_R82x2.bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

FVP_BaseR_Cortex_R82x2.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_BaseR_Cortex_R82x2.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R82x2.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R82x2.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_BaseR_Cortex_R82x2.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_BaseR_Cortex_R82x2.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_BaseR_Cortex_R82x2.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_BaseR_Cortex_R82x2.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_BaseR_Cortex_R82x2.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_BaseR_Cortex_R82x2.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_BaseR_Cortex_R82x2.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x2.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x2.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x2.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x2.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x2.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_BaseR_Cortex_R82x2.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R82x2.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R82x2.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R82x2.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R82x2.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_BaseR_Cortex_R82x2.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_BaseR_Cortex_R82x2.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x2.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x2.bp.hd1cd0.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x2.bp.hd1cd0.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x2.bp.hd1cd0_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R82x2.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_BaseR_Cortex_R82x2.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_BaseR_Cortex_R82x2.bp.mmc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x2.bp.mmc.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x2.bp.mmc.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x2.bp.mmc.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x2.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_BaseR_Cortex_R82x2.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R82x2.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R82x2.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x2.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x2.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_BaseR_Cortex_R82x2.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x2.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x2.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x2.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x2.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_BaseR_Cortex_R82x2.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x2.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x2.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x2.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x2.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_BaseR_Cortex_R82x2.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_BaseR_Cortex_R82x2.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_BaseR_Cortex_R82x2.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_BaseR_Cortex_R82x2.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x2.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x2.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x2.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R82x2.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_BaseR_Cortex_R82x2.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_BaseR_Cortex_R82x2.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x2.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x2.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x2.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x2.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_BaseR_Cortex_R82x2.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x2.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x2.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x2.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x2.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x2.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_BaseR_Cortex_R82x2.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_BaseR_Cortex_R82x2.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x2.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x2.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x2.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x2.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x2.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R82x2.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R82x2.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_BaseR_Cortex_R82x2.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_BaseR_Cortex_R82x2.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x2.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x2.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x2.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x2.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_BaseR_Cortex_R82x2.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x2.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R82x2.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R82x2.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R82x2.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R82x2.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_BaseR_Cortex_R82x2.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_BaseR_Cortex_R82x2.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_BaseR_Cortex_R82x2.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_BaseR_Cortex_R82x2.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x2.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x2.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x2.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x2.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_BaseR_Cortex_R82x2.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_BaseR_Cortex_R82x2.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_BaseR_Cortex_R82x2.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_BaseR_Cortex_R82x2.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R82x2.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_BaseR_Cortex_R82x2.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_BaseR_Cortex_R82x2.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_BaseR_Cortex_R82x2.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_BaseR_Cortex_R82x2.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_BaseR_Cortex_R82x2.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_BaseR_Cortex_R82x2.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_BaseR_Cortex_R82x2.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R82x2.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_BaseR_Cortex_R82x2.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_BaseR_Cortex_R82x2.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_BaseR_Cortex_R82x2.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x2.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x2.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_BaseR_Cortex_R82x2.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x2.cluster0

ARM Cortex-R82 Cluster CT model.

Type: [Cluster_ARM_Cortex-R82](#).

FVP_BaseR_Cortex_R82x2.cluster0.cpu0

ARM Cortex-R82 CT model.

Type: [ARM_Cortex-R82](#).

FVP_BaseR_Cortex_R82x2.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_BaseR_Cortex_R82x2.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R82x2.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R82x2.cluster0.cpu1

ARM Cortex-R82 CT model.

Type: [ARM_Cortex-R82](#).

FVP_BaseR_Cortex_R82x2.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_BaseR_Cortex_R82x2.cluster0.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R82x2.cluster0.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R82x2.cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R82x2.cluster0.labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R82x2.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_BaseR_Cortex_R82x2.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_BaseR_Cortex_R82x2.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_BaseR_Cortex_R82x2.l1ram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x2.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_BaseR_Cortex_R82x2.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x2.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x2.pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x2.pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

14.8 FVP_BaseR_Cortex-R82x4

List of instances in FVP_BaseR_Cortex-R82x4.

FVP_BaseR_Cortex-R82x4 instances

FVP_BaseR_Cortex_R82x4

Base Platform Compute Subsystem for ARMCortexR82x4CT.

Type: [FVP_BaseR_Cortex_R82x4](#).

FVP_BaseR_Cortex_R82x4.bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

FVP_BaseR_Cortex_R82x4.bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_BaseR_Cortex_R82x4.bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_BaseR_Cortex_R82x4.bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_BaseR_Cortex_R82x4.bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_BaseR_Cortex_R82x4.bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_BaseR_Cortex_R82x4.bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_BaseR_Cortex_R82x4.bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

FVP_BaseR_Cortex_R82x4.bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_BaseR_Cortex_R82x4.bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x4.bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x4.bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x4.bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x4.bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x4.bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_BaseR_Cortex_R82x4.bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R82x4.bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R82x4.bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R82x4.bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R82x4.bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

FVP_BaseR_Cortex_R82x4.bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_BaseR_Cortex_R82x4.bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x4.bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x4.bp.hd1cd0.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x4.bp.hd1cd0.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x4.bp.hd1cd0_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R82x4.bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_BaseR_Cortex_R82x4.bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_BaseR_Cortex_R82x4.bp.mmc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x4.bp.mmc.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x4.bp.mmc.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x4.bp.mmc.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x4.bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

FVP_BaseR_Cortex_R82x4.bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R82x4.bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R82x4.bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x4.bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x4.bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_BaseR_Cortex_R82x4.bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x4.bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x4.bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x4.bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x4.bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_BaseR_Cortex_R82x4.bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x4.bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x4.bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x4.bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x4.bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_BaseR_Cortex_R82x4.bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_BaseR_Cortex_R82x4.bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_BaseR_Cortex_R82x4.bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_BaseR_Cortex_R82x4.bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x4.bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x4.bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x4.bp.pl111_clcd_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R82x4.bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_BaseR_Cortex_R82x4.bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_BaseR_Cortex_R82x4.bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x4.bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x4.bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x4.bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x4.bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_BaseR_Cortex_R82x4.bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x4.bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x4.bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x4.bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x4.bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x4.bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_BaseR_Cortex_R82x4.bp.reset_or

Or Gate.

Type: [OrGate](#).

FVP_BaseR_Cortex_R82x4.bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x4.bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x4.bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x4.bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x4.bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x4.bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_BaseR_Cortex_R82x4.bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_BaseR_Cortex_R82x4.bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_BaseR_Cortex_R82x4.bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_BaseR_Cortex_R82x4.bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x4.bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x4.bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x4.bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x4.bp.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_BaseR_Cortex_R82x4.bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x4.bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R82x4.bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R82x4.bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R82x4.bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_BaseR_Cortex_R82x4.bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

FVP_BaseR_Cortex_R82x4.bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

FVP_BaseR_Cortex_R82x4.bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

FVP_BaseR_Cortex_R82x4.bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_BaseR_Cortex_R82x4.bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x4.bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x4.bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x4.bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x4.bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

FVP_BaseR_Cortex_R82x4.bp.ve_sysregs

Type: [VE_SysRegs](#).

FVP_BaseR_Cortex_R82x4.bp.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_BaseR_Cortex_R82x4.bp.virtio_net

VirtioNet device over MMIO transport.

Type: [VirtioNetMMIO](#).

FVP_BaseR_Cortex_R82x4.bp.virtio_net_labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R82x4.bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

FVP_BaseR_Cortex_R82x4.bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

FVP_BaseR_Cortex_R82x4.bp.virtioBlockdevice_labeller

Type: `Labeller`.

FVP_BaseR_Cortex_R82x4.bp.virtioP9device

virtio P9 server.

Type: `VirtioP9Device`.

FVP_BaseR_Cortex_R82x4.bp.virtioP9device_labeller

Type: `Labeller`.

FVP_BaseR_Cortex_R82x4.bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

FVP_BaseR_Cortex_R82x4.bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

FVP_BaseR_Cortex_R82x4.bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_BaseR_Cortex_R82x4.bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_BaseR_Cortex_R82x4.bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_BaseR_Cortex_R82x4.bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_BaseR_Cortex_R82x4.bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_BaseR_Cortex_R82x4.bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x4.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_BaseR_Cortex_R82x4.clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_BaseR_Cortex_R82x4.cluster0

ARM Cortex-R82 Cluster CT model.

Type: [Cluster_ARM_Cortex-R82](#).

FVP_BaseR_Cortex_R82x4.cluster0.cpu0

ARM Cortex-R82 CT model.

Type: [ARM_Cortex-R82](#).

FVP_BaseR_Cortex_R82x4.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_BaseR_Cortex_R82x4.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R82x4.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_BaseR_Cortex_R82x4.cluster0.cpu1

ARM Cortex-R82 CT model.

Type: [ARM_Cortex-R82](#).

FVP_BaseR_Cortex_R82x4.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_BaseR_Cortex_R82x4.cluster0.cpu1.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_BaseR_Cortex_R82x4.cluster0.cpu1.l1icache

PV Cache.

Type: [pVCache](#).

FVP_BaseR_Cortex_R82x4.cluster0.cpu2

ARM Cortex-R82 CT model.

Type: [ARM_Cortex-R82](#).

FVP_BaseR_Cortex_R82x4.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_BaseR_Cortex_R82x4.cluster0.cpu2.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_BaseR_Cortex_R82x4.cluster0.cpu2.l1icache

PV Cache.

Type: [pVCache](#).

FVP_BaseR_Cortex_R82x4.cluster0.cpu3

ARM Cortex-R82 CT model.

Type: [ARM_Cortex-R82](#).

FVP_BaseR_Cortex_R82x4.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_BaseR_Cortex_R82x4.cluster0.cpu3.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_BaseR_Cortex_R82x4.cluster0.cpu3.l1icache

PV Cache.

Type: [pVCache](#).

FVP_BaseR_Cortex_R82x4.cluster0.l2_cache

PV Cache.

Type: [pVCache](#).

FVP_BaseR_Cortex_R82x4.cluster0.labeller

Type: [Labeller](#).

FVP_BaseR_Cortex_R82x4.dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

FVP_BaseR_Cortex_R82x4.elfloader

ELF loader component.

Type: [ElfLoader](#).

FVP_BaseR_Cortex_R82x4.gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

FVP_BaseR_Cortex_R82x4.llram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_BaseR_Cortex_R82x4.pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

FVP_BaseR_Cortex_R82x4.pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_BaseR_Cortex_R82x4.pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_BaseR_Cortex_R82x4.pctl.timer_reset.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_BaseR_Cortex_R82x4.pctl.timer_reset.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

15. VE Platform FVPs

This chapter describes the VE Platform FVPs contained in the FVP Standard Library.

For the VE memory maps, see [VE memory map for Cortex-A series](#) and [VE memory map for Cortex-R series](#) in the Fast Models Reference Guide.

15.1 FVP_VE_Cortex-A15x1

List of instances in FVP_VE_Cortex-A15x1.

FVP_VE_Cortex-A15x1 instances

FVP_VE_Cortex_A15x1

Top level component of the Cortex_A15x1 Versatile Express inspired model.

Type: FVP_VE_Cortex_A15x1.

FVP_VE_Cortex_A15x1.cluster

ARM Cortex-A15 Cluster CT model.

Type: cluster_ARM_Cortex-A15.

FVP_VE_Cortex_A15x1.cluster.cpu0

ARM Cortex-A15 CT model.

Type: [ARM_Cortex-A15](#).

FVP_VE_Cortex_A15x1.cluster.cpu0.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A15x1.cluster.cpu0.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A15x1.cluster.cpu0.l1dcache

PV Cache.

Type: pvcache.

FVP_VE_Cortex_A15x1.cluster.cpu0.l1icache

PV Cache.

Type: pvcache.

FVP_VE_Cortex_A15x1.cluster.l2_cache

PV Cache.

Type: pvcache.

FVP_VE_Cortex_A15x1.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: vEDaughterBoard.

FVP_VE_Cortex_A15x1.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x1.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x1.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x1.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_VE_Cortex_A15x1.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_VE_Cortex_A15x1.daughterboard.hdlcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1.daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1.daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1.daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_A15x1.daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x1.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A15x1.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A15x1.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1.daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x1.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

FVP_VE_Cortex_A15x1.globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: `MemoryMappedCounterModule`.

FVP_VE_Cortex_A15x1.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: `VEMotherBoard`.

FVP_VE_Cortex_A15x1.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_VE_Cortex_A15x1.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_VE_Cortex_A15x1.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_VE_Cortex_A15x1.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_VE_Cortex_A15x1.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

FVP_VE_Cortex_A15x1.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

FVP_VE_Cortex_A15x1.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_VE_Cortex_A15x1.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A15x1.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A15x1.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A15x1.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A15x1.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A15x1.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A15x1.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A15x1.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A15x1.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A15x1.motherboard.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1.motherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1.motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1.motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A15x1.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A15x1.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A15x1.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A15x1.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A15x1.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A15x1.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A15x1.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A15x1.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_A15x1.motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1.motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1.motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_A15x1.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A15x1.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A15x1.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x1.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x1.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x1.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x1.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A15x1.motherboard.virtioblockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A15x1.motherboard.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A15x1.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A15x1.motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A15x1.motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1.motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1.motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

15.2 FVP_VE_Cortex-A15x1-A7x1

List of instances in FVP_VE_Cortex-A15x1-A7x1.

FVP_VE_Cortex-A15x1-A7x1 instances

FVP_VE_Cortex_A15x1_A7x1

Top level component of the Cortex A15x1 A7x1 Versatile Express inspired model.

Type: [FVP_VE_Cortex_A15x1_A7x1](#).

FVP_VE_Cortex_A15x1_A7x1.coretile

Dual cluster ARM Cortex-A15x1 and ARM Cortex-A7x1 Core Tile.

Type: [ARM_Cortex_A15x1_A7x1_CT](#).

FVP_VE_Cortex_A15x1_A7x1.coretile.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_VE_Cortex_A15x1_A7x1.coretile.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.coretile.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.coretile.cluster0

ARM Cortex-A15 Cluster CT model.

Type: [Cluster_ARM_Cortex-A15](#).

FVP_VE_Cortex_A15x1_A7x1.coretile.cluster0.cpu0

ARM Cortex-A15 CT model.

Type: [ARM_Cortex-A15](#).

FVP_VE_Cortex_A15x1_A7x1.coretile.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: `Tlbcadi`.

FVP_VE_Cortex_A15x1_A7x1.coretile.cluster0.cpu0.itlb

TLB - instruction, data or unified.

Type: `Tlbcadi`.

FVP_VE_Cortex_A15x1_A7x1.coretile.cluster0.cpu0.l1dcache

PV Cache.

Type: `pvcache`.

FVP_VE_Cortex_A15x1_A7x1.coretile.cluster0.cpu0.l1icache

PV Cache.

Type: `pvcache`.

FVP_VE_Cortex_A15x1_A7x1.coretile.cluster0.l2_cache

PV Cache.

Type: `pvcache`.

FVP_VE_Cortex_A15x1_A7x1.coretile.cluster1

ARM Cortex-A7 Cluster CT model.

Type: `cluster_ARM_Cortex-A7`.

FVP_VE_Cortex_A15x1_A7x1.coretile.cluster1.cpu0

ARM Cortex-A7 CT model.

Type: [ARM_Cortex-A7](#).

FVP_VE_Cortex_A15x1_A7x1.coretile.cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: `Tlbcadi`.

FVP_VE_Cortex_A15x1_A7x1.coretile.cluster1.cpu0.itlb

TLB - instruction, data or unified.

Type: `Tlbcadi`.

FVP_VE_Cortex_A15x1_A7x1.coretile.cluster1.cpu0.l1dcache

PV Cache.

Type: `pvcache`.

FVP_VE_Cortex_A15x1_A7x1.coretile.cluster1.cpu0.l1icache

PV Cache.

Type: `pvcache`.

FVP_VE_Cortex_A15x1_A7x1.coretile.cluster1.l2_cache

PV Cache.

Type: `pvcache`.

FVP_VE_Cortex_A15x1_A7x1.coretile.dualclustersystemconfigurationblock

Dual Cluster System Configuration Block.

Type: [DualClusterSystemConfigurationBlock](#).

FVP_VE_Cortex_A15x1_A7x1.coretile.globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_VE_Cortex_A15x1_A7x1.coretile.v7_vgic

System VGIC architecture version v7.

Type: [v7_VGIC](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.hdlcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1_A7x1.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A15x1_A7x1.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A15x1_A7x1.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.virtioBlockDevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.virtioP9Device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x1_A7x1.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

15.3 FVP_VE_Cortex-A15x2

List of instances in FVP_VE_Cortex-A15x2.

FVP_VE_Cortex-A15x2 instances

FVP_VE_Cortex_A15x2

Top level component of the Cortex_A15x2 Versatile Express inspired model.

Type: [FVP_VE_Cortex_A15x2](#).

FVP_VE_Cortex_A15x2.cluster

ARM Cortex-A15 Cluster CT model.

Type: [Cluster_ARM_Cortex-A15](#).

FVP_VE_Cortex_A15x2.cluster.cpu0

ARM Cortex-A15 CT model.

Type: [ARM_Cortex-A15](#).

FVP_VE_Cortex_A15x2.cluster.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A15x2.cluster.cpu0.itlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A15x2.cluster.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A15x2.cluster.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A15x2.cluster.cpu1

ARM Cortex-A15 CT model.

Type: [ARM_Cortex-A15](#).

FVP_VE_Cortex_A15x2.cluster.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A15x2.cluster.cpu1.itlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A15x2.cluster.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A15x2.cluster.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A15x2.cluster.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A15x2.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

FVP_VE_Cortex_A15x2.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x2.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x2.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x2.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_VE_Cortex_A15x2.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_VE_Cortex_A15x2.daughterboard.hdlcd.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2.daughterboard.hdlcd.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2.daughterboard.hdlcd.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2.daughterboard.hdlcd.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_A15x2.daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x2.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A15x2.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A15x2.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2.daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x2.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_VE_Cortex_A15x2.globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_VE_Cortex_A15x2.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

FVP_VE_Cortex_A15x2.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A15x2.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A15x2.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A15x2.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A15x2.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A15x2.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A15x2.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A15x2.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A15x2.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A15x2.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A15x2.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A15x2.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A15x2.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A15x2.motherboard.mmc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2.motherboard.mmc.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2.motherboard.mmc.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2.motherboard.mmc.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart0.clk_divider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart0.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A15x2.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A15x2.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A15x2.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A15x2.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A15x2.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A15x2.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A15x2.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A15x2.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_A15x2.motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2.motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2.motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_A15x2.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A15x2.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A15x2.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x2.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x2.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x2.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x2.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A15x2.motherboard.virtio_blockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A15x2.motherboard.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A15x2.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A15x2.motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A15x2.motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2.motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2.motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

15.4 FVP_VE_Cortex-A15x2-A7x2

List of instances in FVP_VE_Cortex-A15x2-A7x2.

FVP_VE_Cortex-A15x2-A7x2 instances

FVP_VE_Cortex_A15x2_A7x2

Top level component of the Cortex A15x2 A7x2 Versatile Express inspired model.

Type: [FVP_VE_Cortex_A15x2_A7x2](#).

FVP_VE_Cortex_A15x2_A7x2.coretile

Dual cluster ARM Cortex-A15x2 and ARM Cortex-A7x2 Core Tile.

Type: [ARM_Cortex_A15x2_A7x2_CT](#).

FVP_VE_Cortex_A15x2_A7x2.coretile.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_VE_Cortex_A15x2_A7x2.coretile.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.coretile.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster0

ARM Cortex-A15 Cluster CT model.

Type: [Cluster_ARM_Cortex-A15](#).

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster0.cpu0

ARM Cortex-A15 CT model.

Type: [ARM_Cortex-A15](#).

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster0.cpu0.itlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster0.cpu1

ARM Cortex-A15 CT model.

Type: [ARM_Cortex-A15](#).

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster0.cpu1.itlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster0.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster0.cpu1.l1icache

PV Cache.

Type: pvcache.

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster0.l2_cache

PV Cache.

Type: pvcache.

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster1

ARM Cortex-A7 Cluster CT model.

Type: cluster_ARM_Cortex-A7.

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster1.cpu0

ARM Cortex-A7 CT model.

Type: [ARM_Cortex-A7](#).

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster1.cpu0.itlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster1.cpu0.l1dcache

PV Cache.

Type: pvcache.

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster1.cpu0.l1icache

PV Cache.

Type: pvcache.

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster1.cpu1

ARM Cortex-A7 CT model.

Type: [ARM_Cortex-A7](#).

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster1.cpu1.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster1.cpu1.itlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster1.cpu1.l1dcache

PV Cache.

Type: pvcache.

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster1.cpu1.l1icache

PV Cache.

Type: pvcache.

FVP_VE_Cortex_A15x2_A7x2.coretile.cluster1.l2_cache

PV Cache.

Type: pvcache.

FVP_VE_Cortex_A15x2_A7x2.coretile.dualclustersystemconfigurationblock

Dual Cluster System Configuration Block.

Type: [DualClusterSystemConfigurationBlock](#).

FVP_VE_Cortex_A15x2_A7x2.coretile.globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_VE_Cortex_A15x2_A7x2.coretile.v7_vgic

System VGIC architecture version v7.

Type: [v7_VGIC](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.hdlcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2_A7x2.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.virtioBlockDevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.virtioP9Device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x2_A7x2.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

15.5 FVP_VE_Cortex-A15x4

List of instances in FVP_VE_Cortex-A15x4.

FVP_VE_Cortex-A15x4 instances

FVP_VE_Cortex_A15x4

Top level component of the Cortex_A15x4 Versatile Express inspired model.

Type: [FVP_VE_Cortex_A15x4](#).

FVP_VE_Cortex_A15x4.cluster

ARM Cortex-A15 Cluster CT model.

Type: [Cluster_ARM_Cortex-A15](#).

FVP_VE_Cortex_A15x4.cluster.cpu0

ARM Cortex-A15 CT model.

Type: [ARM_Cortex-A15](#).

FVP_VE_Cortex_A15x4.cluster.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A15x4.cluster.cpu0.itlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A15x4.cluster.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A15x4.cluster.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A15x4.cluster.cpu1

ARM Cortex-A15 CT model.

Type: [ARM_Cortex-A15](#).

FVP_VE_Cortex_A15x4.cluster.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A15x4.cluster.cpu1.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A15x4.cluster.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4.cluster.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4.cluster.cpu2

ARM Cortex-A15 CT model.

Type: [ARM_Cortex-A15](#).

FVP_VE_Cortex_A15x4.cluster.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A15x4.cluster.cpu2.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A15x4.cluster.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4.cluster.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4.cluster.cpu3

ARM Cortex-A15 CT model.

Type: [ARM_Cortex-A15](#).

FVP_VE_Cortex_A15x4.cluster.cpu3.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A15x4.cluster.cpu3.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A15x4.cluster.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4.cluster.cpu3.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4.cluster.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A15x4.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

FVP_VE_Cortex_A15x4.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x4.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x4.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x4.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_VE_Cortex_A15x4.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_VE_Cortex_A15x4.daughterboard.hdlcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4.daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4.daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4.daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_A15x4.daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x4.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A15x4.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A15x4.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4.daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x4.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_VE_Cortex_A15x4.globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_VE_Cortex_A15x4.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

FVP_VE_Cortex_A15x4.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A15x4.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A15x4.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A15x4.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A15x4.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A15x4.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A15x4.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A15x4.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A15x4.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A15x4.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A15x4.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A15x4.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A15x4.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A15x4.motherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4.motherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4.motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4.motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A15x4.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A15x4.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A15x4.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A15x4.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A15x4.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A15x4.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A15x4.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A15x4.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_A15x4.motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4.motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4.motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_A15x4.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A15x4.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A15x4.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x4.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x4.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x4.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x4.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A15x4.motherboard.virtioblockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A15x4.motherboard.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A15x4.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A15x4.motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A15x4.motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4.motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4.motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

15.6 FVP_VE_Cortex-A15x4-A7x4

List of instances in FVP_VE_Cortex-A15x4-A7x4.

FVP_VE_Cortex-A15x4-A7x4 instances

FVP_VE_Cortex_A15x4_A7x4

Top level component of the Cortex A15x4 A7x4 Versatile Express inspired model.

Type: [FVP_VE_Cortex_A15x4_A7x4](#).

FVP_VE_Cortex_A15x4_A7x4.coretile

Dual cluster ARM Cortex-A15x4 and ARM Cortex-A7x4 Core Tile.

Type: [ARM_Cortex_A15x4_A7x4_CT](#).

FVP_VE_Cortex_A15x4_A7x4.coretile.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_VE_Cortex_A15x4_A7x4.coretile.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.coretile.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0

ARM Cortex-A15 Cluster CT model.

Type: [Cluster_ARM_Cortex-A15](#).

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.cpu0

ARM Cortex-A15 CT model.

Type: [ARM_Cortex-A15](#).

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.cpu0.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.cpu0.l1dcache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.cpu0.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.cpu1

ARM Cortex-A15 CT model.

Type: [ARM_Cortex-A15](#).

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.cpu1.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.cpu2

ARM Cortex-A15 CT model.

Type: [ARM_Cortex-A15](#).

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.cpu2.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.cpu3

ARM Cortex-A15 CT model.

Type: [ARM_Cortex-A15](#).

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.cpu3.itlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.cpu3.l1licache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster0.l2_cache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1

ARM Cortex-A7 Cluster CT model.

Type: [Cluster_ARM_Cortex-A7](#).

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu0

ARM Cortex-A7 CT model.

Type: [ARM_Cortex-A7](#).

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu0.itlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu0.l1dcache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu0.l1licache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu1

ARM Cortex-A7 CT model.

Type: [ARM_Cortex-A7](#).**FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu1.dtlb**

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu1.itlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu2

ARM Cortex-A7 CT model.

Type: [ARM_Cortex-A7](#).**FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu2.dtlb**

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu2.itlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu3

ARM Cortex-A7 CT model.

Type: [ARM_Cortex-A7](#).**FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu3.dtlb**

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu3.itlb

TLB - instruction, data or unified.

Type: Tlbcadi.

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu3.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.cpu3.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A15x4_A7x4.coretile.cluster1.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A15x4_A7x4.coretile.dualclustersystemconfigurationblock

Dual Cluster System Configuration Block.

Type: [DualClusterSystemConfigurationBlock](#).

FVP_VE_Cortex_A15x4_A7x4.coretile.globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_VE_Cortex_A15x4_A7x4.coretile.v7_vgic

System VGIC architecture version v7.

Type: [v7_VGIC](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.hdlcd.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.hdlcd.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.hdlcd.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.hdlcd.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4_A7x4.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A15x4_A7x4.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A15x4_A7x4.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A15x4_A7x4.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A15x4_A7x4.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.virtio_blockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A15x4_A7x4.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

15.7 FVP_VE_Cortex-A17x1

List of instances in FVP_VE_Cortex-A17x1.

FVP_VE_Cortex-A17x1 instances

FVP_VE_Cortex_A17x1

Top level component of the Cortex_A17x1 Versatile Express inspired model.

Type: [FVP_VE_Cortex_A17x1](#).

FVP_VE_Cortex_A17x1.cluster

ARM Cortex-A17 Cluster CT model.

Type: [Cluster_ARM_Cortex-A17](#).

FVP_VE_Cortex_A17x1.cluster.cpu0

ARM Cortex-A17 CT model.

Type: [ARM_Cortex-A17](#).

FVP_VE_Cortex_A17x1.cluster.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A17x1.cluster.cpu0.itlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A17x1.cluster.cpu0.l1dcache

PV Cache.

Type: [pVCache](#).

FVP_VE_Cortex_A17x1.cluster.cpu0.l1icache

PV Cache.

Type: [pVCache](#).

FVP_VE_Cortex_A17x1.cluster.l2_cache

PV Cache.

Type: [pVCache](#).

FVP_VE_Cortex_A17x1.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [vEDaughterBoard](#).

FVP_VE_Cortex_A17x1.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x1.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x1.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x1.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x1.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x1.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x1.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_VE_Cortex_A17x1.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLC](#).

FVP_VE_Cortex_A17x1.daughterboard.hdlcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1.daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1.daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1.daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_A17x1.daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x1.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x1.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A17x1.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A17x1.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x1.daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x1.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x1.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_VE_Cortex_A17x1.gic400

GIC-400 Generic Interrupt Controller.

Type: [GIC_400](#).

FVP_VE_Cortex_A17x1.globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_VE_Cortex_A17x1.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

FVP_VE_Cortex_A17x1.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A17x1.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A17x1.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A17x1.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A17x1.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A17x1.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A17x1.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A17x1.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x1.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x1.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x1.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A17x1.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A17x1.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A17x1.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A17x1.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A17x1.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A17x1.motherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1.motherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1.motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1.motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A17x1.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A17x1.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A17x1.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A17x1.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A17x1.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A17x1.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A17x1.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A17x1.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_A17x1.motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1.motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x1.motherboard.sm5c111

SM5C111 ethernet controller.

Type: [SM5C111](#).

FVP_VE_Cortex_A17x1.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A17x1.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A17x1.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x1.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x1.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x1.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x1.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A17x1.motherboard.virtio_blockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A17x1.motherboard.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A17x1.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A17x1.motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A17x1.motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1.motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1.motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

15.8 FVP_VE_Cortex-A17x1-A7x1

List of instances in FVP_VE_Cortex-A17x1-A7x1.

FVP_VE_Cortex-A17x1-A7x1 instances

FVP_VE_Cortex_A17x1_A7x1

Top level component of the Cortex A17x1 A7x1 Versatile Express inspired model.

Type: [FVP_VE_Cortex_A17x1_A7x1](#).

FVP_VE_Cortex_A17x1_A7x1.coretile

Dual cluster ARM Cortex-A17x1 and ARM Cortex-A7x1 Core Tile.

Type: [ARM_Cortex_A17x1_A7x1_CT](#).

FVP_VE_Cortex_A17x1_A7x1.coretile.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_VE_Cortex_A17x1_A7x1.coretile.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.coretile.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.coretile.cluster0

ARM Cortex-A17 Cluster CT model.

Type: [Cluster_ARM_Cortex-A17](#).

FVP_VE_Cortex_A17x1_A7x1.coretile.cluster0.cpu0

ARM Cortex-A17 CT model.

Type: [ARM_Cortex-A17](#).

FVP_VE_Cortex_A17x1_A7x1.coretile.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [Tlbcadi](#).

FVP_VE_Cortex_A17x1_A7x1.coretile.cluster0.cpu0.itlb

TLB - instruction, data or unified.

Type: [Tlbcadi](#).

FVP_VE_Cortex_A17x1_A7x1.coretile.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A17x1_A7x1.coretile.cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A17x1_A7x1.coretile.cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A17x1_A7x1.coretile.cluster1

ARM Cortex-A7 Cluster CT model.

Type: [Cluster_ARM_Cortex-A7](#).

FVP_VE_Cortex_A17x1_A7x1.coretile.cluster1.cpu0

ARM Cortex-A7 CT model.

Type: [ARM_Cortex-A7](#).

FVP_VE_Cortex_A17x1_A7x1.coretile.cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: [Tlbcadi](#).

FVP_VE_Cortex_A17x1_A7x1.coretile.cluster1.cpu0.itlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

FVP_VE_Cortex_A17x1_A7x1.coretile.cluster1.cpu0.l1dcache

PV Cache.

Type: `PVCache`.

FVP_VE_Cortex_A17x1_A7x1.coretile.cluster1.cpu0.l1icache

PV Cache.

Type: `PVCache`.

FVP_VE_Cortex_A17x1_A7x1.coretile.cluster1.l2_cache

PV Cache.

Type: `PVCache`.

FVP_VE_Cortex_A17x1_A7x1.coretile.dualclustersystemconfigurationblock

Dual Cluster System Configuration Block.

Type: `DualClusterSystemConfigurationBlock`.

FVP_VE_Cortex_A17x1_A7x1.coretile.globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: `MemoryMappedCounterModule`.

FVP_VE_Cortex_A17x1_A7x1.coretile.v7_vgic

System VGIC architecture version v7.

Type: `v7_VGIC`.

FVP_VE_Cortex_A17x1_A7x1.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: `VEDaughterBoard`.

FVP_VE_Cortex_A17x1_A7x1.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_VE_Cortex_A17x1_A7x1.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

FVP_VE_Cortex_A17x1_A7x1.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_VE_Cortex_A17x1_A7x1.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_VE_Cortex_A17x1_A7x1.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x1_A7x1.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x1_A7x1.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x1_A7x1.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x1_A7x1.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_VE_Cortex_A17x1_A7x1.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_VE_Cortex_A17x1_A7x1.daughterboard.hdlcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1_A7x1.daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1_A7x1.daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1_A7x1.daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1_A7x1.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_A17x1_A7x1.daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x1_A7x1.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x1_A7x1.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A17x1_A7x1.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A17x1_A7x1.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x1_A7x1.daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x1_A7x1.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x1_A7x1.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A17x1_A7x1.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A17x1_A7x1.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A17x1_A7x1.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A17x1_A7x1.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.virtio_blockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x1_A7x1.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

15.9 FVP_VE_Cortex-A17x2

List of instances in FVP_VE_Cortex-A17x2.

FVP_VE_Cortex-A17x2 instances

FVP_VE_Cortex_A17x2

Top level component of the Cortex_A17x2 Versatile Express inspired model.

Type: [FVP_VE_Cortex_A17x2](#).

FVP_VE_Cortex_A17x2.cluster

ARM Cortex-A17 Cluster CT model.

Type: [Cluster_ARM_Cortex-A17](#).

FVP_VE_Cortex_A17x2.cluster.cpu0

ARM Cortex-A17 CT model.

Type: [ARM_Cortex-A17](#).

FVP_VE_Cortex_A17x2.cluster.cpu0.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A17x2.cluster.cpu0.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A17x2.cluster.cpu0.l1dcache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A17x2.cluster.cpu0.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A17x2.cluster.cpu1

ARM Cortex-A17 CT model.

Type: [ARM_Cortex-A17](#).**FVP_VE_Cortex_A17x2.cluster.cpu1.dtlb**

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A17x2.cluster.cpu1.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A17x2.cluster.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A17x2.cluster.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A17x2.cluster.l2_cache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A17x2.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: vEDaughterBoard.

FVP_VE_Cortex_A17x2.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x2.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x2.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x2.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x2.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x2.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x2.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

FVP_VE_Cortex_A17x2.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

FVP_VE_Cortex_A17x2.daughterboard.hdlcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x2.daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_VE_Cortex_A17x2.daughterboard.hdlcd.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_VE_Cortex_A17x2.daughterboard.hdlcd.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_VE_Cortex_A17x2.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: `VEInterruptMapper`.

FVP_VE_Cortex_A17x2.daughterboard.nonsecure_region

Allow `TrustZone` secure/normal bus signals to be routed separately.

Type: `TZSwitch`.

FVP_VE_Cortex_A17x2.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_VE_Cortex_A17x2.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: `IntelStrataFlashJ3`.

FVP_VE_Cortex_A17x2.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: `FlashLoader`.

FVP_VE_Cortex_A17x2.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_VE_Cortex_A17x2.daughterboard.secure_region

Allow `TrustZone` secure/normal bus signals to be routed separately.

Type: `TZSwitch`.

FVP_VE_Cortex_A17x2.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

FVP_VE_Cortex_A17x2.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

FVP_VE_Cortex_A17x2.gic400

GIC-400 Generic Interrupt Controller.

Type: [GIC_400](#).

FVP_VE_Cortex_A17x2.globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_VE_Cortex_A17x2.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

FVP_VE_Cortex_A17x2.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A17x2.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A17x2.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A17x2.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A17x2.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A17x2.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A17x2.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A17x2.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x2.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x2.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x2.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A17x2.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A17x2.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A17x2.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A17x2.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A17x2.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A17x2.motherboard.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x2.motherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x2.motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x2.motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x2.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x2.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A17x2.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x2.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x2.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x2.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x2.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A17x2.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x2.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x2.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x2.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x2.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A17x2.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A17x2.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A17x2.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A17x2.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x2.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x2.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x2.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x2.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A17x2.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A17x2.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x2.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_VE_Cortex_A17x2.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_VE_Cortex_A17x2.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_VE_Cortex_A17x2.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked `PS2Data` signals which can be routed to a `PL050_KMI` component.

Type: `PS2Mouse`.

FVP_VE_Cortex_A17x2.motherboard.ps2mouse.ps2_clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

FVP_VE_Cortex_A17x2.motherboard.ps2mouse.ps2_clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

FVP_VE_Cortex_A17x2.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

FVP_VE_Cortex_A17x2.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

FVP_VE_Cortex_A17x2.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x2.motherboard.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_A17x2.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A17x2.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x2.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x2.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x2.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x2.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A17x2.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x2.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x2.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x2.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x2.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A17x2.motherboard.virtio_blockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A17x2.motherboard.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A17x2.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A17x2.motherboard.vis_recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A17x2.motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x2.motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x2.motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x2.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x2.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x2.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

15.10 FVP_VE_Cortex-A17x4

List of instances in FVP_VE_Cortex-A17x4.

FVP_VE_Cortex-A17x4 instances

FVP_VE_Cortex_A17x4

Top level component of the Cortex_A17x4 Versatile Express inspired model.

Type: `FVP_VE_Cortex_A17x4`.

FVP_VE_Cortex_A17x4.cluster

ARM Cortex-A17 Cluster CT model.

Type: `cluster_ARM_Cortex-A17`.

FVP_VE_Cortex_A17x4.cluster.cpu0

ARM Cortex-A17 CT model.

Type: `ARM_Cortex-A17`.

FVP_VE_Cortex_A17x4.cluster.cpu0.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

FVP_VE_Cortex_A17x4.cluster.cpu0.itlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

FVP_VE_Cortex_A17x4.cluster.cpu0.l1dcache

PV Cache.

Type: `PVCache`.

FVP_VE_Cortex_A17x4.cluster.cpu0.l1icache

PV Cache.

Type: `PVCache`.

FVP_VE_Cortex_A17x4.cluster.cpu1

ARM Cortex-A17 CT model.

Type: `ARM_Cortex-A17`.

FVP_VE_Cortex_A17x4.cluster.cpu1.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

FVP_VE_Cortex_A17x4.cluster.cpu1.itlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

FVP_VE_Cortex_A17x4.cluster.cpu1.l1dcache

PV Cache.

Type: `PVCache`.

FVP_VE_Cortex_A17x4.cluster.cpu1.l1icache

PV Cache.

Type: `PVCache`.

FVP_VE_Cortex_A17x4.cluster.cpu2

ARM Cortex-A17 CT model.

Type: [ARM_Cortex-A17](#).

FVP_VE_Cortex_A17x4.cluster.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A17x4.cluster.cpu2.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A17x4.cluster.cpu2.l1dcache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A17x4.cluster.cpu2.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A17x4.cluster.cpu3

ARM Cortex-A17 CT model.

Type: [ARM_Cortex-A17](#).

FVP_VE_Cortex_A17x4.cluster.cpu3.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A17x4.cluster.cpu3.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A17x4.cluster.cpu3.l1dcache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A17x4.cluster.cpu3.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A17x4.cluster.l2_cache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A17x4.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: vEDaughterBoard.

FVP_VE_Cortex_A17x4.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x4.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x4.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x4.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_VE_Cortex_A17x4.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_VE_Cortex_A17x4.daughterboard.hdlcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4.daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4.daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4.daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_A17x4.daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x4.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A17x4.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A17x4.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4.daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x4.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_VE_Cortex_A17x4.gic400

GIC-400 Generic Interrupt Controller.

Type: [GIC_400](#).

FVP_VE_Cortex_A17x4.globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_VE_Cortex_A17x4.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

FVP_VE_Cortex_A17x4.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A17x4.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A17x4.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A17x4.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A17x4.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A17x4.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A17x4.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A17x4.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A17x4.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A17x4.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A17x4.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A17x4.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A17x4.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A17x4.motherboard.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4.motherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4.motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4.motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A17x4.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A17x4.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A17x4.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A17x4.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A17x4.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A17x4.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A17x4.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A17x4.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_A17x4.motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4.motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4.motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_A17x4.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A17x4.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A17x4.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x4.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x4.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x4.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x4.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A17x4.motherboard.virtioblockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A17x4.motherboard.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A17x4.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A17x4.motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A17x4.motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4.motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4.motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

15.11 FVP_VE_Cortex-A17x4-A7x4

List of instances in FVP_VE_Cortex-A17x4-A7x4.

FVP_VE_Cortex-A17x4-A7x4 instances

FVP_VE_Cortex_A17x4_A7x4

Top level component of the Cortex A17x4 A7x4 Versatile Express inspired model.

Type: [FVP_VE_Cortex_A17x4_A7x4](#).

FVP_VE_Cortex_A17x4_A7x4.coretile

Dual cluster ARM Cortex-A17x4 and ARM Cortex-A7x4 Core Tile.

Type: [ARM_Cortex_A17x4_A7x4_CT](#).

FVP_VE_Cortex_A17x4_A7x4.coretile.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

FVP_VE_Cortex_A17x4_A7x4.coretile.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.coretile.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.coretile.cluster0

ARM Cortex-A17 Cluster CT model.

Type: [Cluster_ARM_Cortex-A17](#).

FVP_VE_Cortex_A17x4_A7x4.coretile.cluster0.cpu0

ARM Cortex-A17 CT model.

Type: [ARM_Cortex-A17](#).

FVP_VE_Cortex_A17x4_A7x4.coretile.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A17x4_A7x4.coretile.cluster0.cpu0.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A17x4_A7x4.coretile.cluster0.cpu0.l1dcache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A17x4_A7x4.coretile.cluster0.cpu0.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A17x4_A7x4.coretile.cluster0.cpu1

ARM Cortex-A17 CT model.

Type: [ARM_Cortex-A17](#).

FVP_VE_Cortex_A17x4_A7x4.coretile.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A17x4_A7x4.coretile.cluster0.cpu1.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A17x4_A7x4.coretile.cluster0.cpu1.l1dcache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A17x4_A7x4.coretile.cluster0.cpu1.l1icache

PV Cache.

Type: pVCache.

FVP_VE_Cortex_A17x4_A7x4.coretile.cluster0.cpu2

ARM Cortex-A17 CT model.

Type: [ARM_Cortex-A17](#).

FVP_VE_Cortex_A17x4_A7x4.coretile.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A17x4_A7x4.coretile.cluster0.cpu2.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

FVP_VE_Cortex_A17x4_A7x4.coretile.dualclustersystemconfigurationblock

Dual Cluster System Configuration Block.

Type: [DualClusterSystemConfigurationBlock](#).

FVP_VE_Cortex_A17x4_A7x4.coretile.globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

FVP_VE_Cortex_A17x4_A7x4.coretile.v7_vgic

System VGIC architecture version v7.

Type: [v7_VGIC](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.hdlcd.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.hdlcd.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.hdlcd.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.hdlcd.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4_A7x4.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A17x4_A7x4.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A17x4_A7x4.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A17x4_A7x4.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A17x4_A7x4.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.virtio_blockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A17x4_A7x4.motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

15.12 FVP_VE_Cortex-A5x1

List of instances in FVP_VE_Cortex-A5x1.

FVP_VE_Cortex-A5x1 instances

FVP_VE_Cortex_A5x1

Top level component of the Cortex-A5x1 Versatile Express inspired model.

Type: [FVP_VE_Cortex_A5x1](#).

FVP_VE_Cortex_A5x1.cluster

ARM CORTEXA5MP Cluster CT model.

Type: [Cluster_ARM_Cortex-A5MP](#).

FVP_VE_Cortex_A5x1.cluster.cpu0

ARM CORTEXA5MP CT model.

Type: [ARM_Cortex-A5MP](#).

FVP_VE_Cortex_A5x1.cluster.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A5x1.cluster.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

FVP_VE_Cortex_A5x1.cluster.cpu0.utlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

FVP_VE_Cortex_A5x1.daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

FVP_VE_Cortex_A5x1.daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x1.daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x1.daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x1.daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A5x1.daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A5x1.daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A5x1.daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

FVP_VE_Cortex_A5x1.daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLC](#).

FVP_VE_Cortex_A5x1.daughterboard.hdlcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x1.daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x1.daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x1.daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x1.daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

FVP_VE_Cortex_A5x1.daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A5x1.daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x1.daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A5x1.daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A5x1.daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x1.daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

FVP_VE_Cortex_A5x1.daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x1.daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

FVP_VE_Cortex_A5x1.motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

FVP_VE_Cortex_A5x1.motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A5x1.motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A5x1.motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

FVP_VE_Cortex_A5x1.motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

FVP_VE_Cortex_A5x1.motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A5x1.motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

FVP_VE_Cortex_A5x1.motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

FVP_VE_Cortex_A5x1.motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x1.motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x1.motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x1.motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A5x1.motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

FVP_VE_Cortex_A5x1.motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A5x1.motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

FVP_VE_Cortex_A5x1.motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

FVP_VE_Cortex_A5x1.motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

FVP_VE_Cortex_A5x1.motherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x1.motherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x1.motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x1.motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x1.motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x1.motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

FVP_VE_Cortex_A5x1.motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x1.motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x1.motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x1.motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x1.motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

FVP_VE_Cortex_A5x1.motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x1.motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x1.motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x1.motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x1.motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A5x1.motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

FVP_VE_Cortex_A5x1.motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

FVP_VE_Cortex_A5x1.motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

FVP_VE_Cortex_A5x1.motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x1.motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x1.motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

FVP_VE_Cortex_A5x1.motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

FVP_VE_Cortex_A5x1.motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x1.motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x1.motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x1.motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x1.motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

FVP_VE_Cortex_A5x1.motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x1.motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x1.motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x1.motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x1.motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

FVP_VE_Cortex_A5x1.motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

FVP_VE_Cortex_A5x1.motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

FVP_VE_Cortex_A5x1.motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

FVP_VE_Cortex_A5x1.motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

FVP_VE_Cortex_A5x1.motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

FVP_VE_Cortex_A5x1.motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

FVP_VE_Cortex_A5x1.motherboard.sp810_sysctrl

Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

FVP_VE_Cortex_A5x1.motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

FVP_VE_Cortex_A5x1.motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A5x1.motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A5x1.motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A5x1.motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

FVP_VE_Cortex_A5x1.motherboard.ve_sysregs

Type: [VE_SysRegs](#).

FVP_VE_Cortex_A5x1.motherboard.virtioblockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

FVP_VE_Cortex_A5x1.motherboard.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

FVP_VE_Cortex_A5x1.motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

FVP_VE_Cortex_A5x1.motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

FVP_VE_Cortex_A5x1.motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).
