Recognise writes to the GITS_TRANSLATER register and rewrite them to go to the GITS_TRANSLATE64R register. The DeviceID is expected to be in the bottom 32 bits of ExtendedID of the transaction. Debug transactions and reads are not rewritten. This component can also, optionally, apply a 16 bit 'label' to the top 16 bits of the MasterID in the same way that the Labeller component does.

Type: [MSIRewriter](#).**pci.pci_smmuv3_msirewriter.mapper**Type: [PVBusMapper](#).**pci.pci_smmuv3_msirewriter.pvbusmaster**Type: [PVBusMaster](#).**pci.pci_smmuv3_msirewriter.pvbusslave**Type: [PVBusSlave](#).

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

pctl.busslave

Type: [PVBusSlave](#).

pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

pctl.utility_bus3

Type: [PVBusMaster](#).

test_engine

Test Engine for base platform.

Type: [TestEngine](#).

test_engine.device0

SMMUv3 Test Engine.

Type: [SMMUv3TestEngine](#).

test_engine.device0.register_file[0]

Type: [PVBusSlave](#).

13. BaseR Platform FVPs

This chapter describes the BaseR Platform FVPs contained in the FVP Standard Library.

For the BaseR Platform memory map, see [BaseR Platform memory map](#) in the *Fast Models Reference Guide*.

13.1 FVP_BaseR_Cortex-R52Plus

List of instances in FVP_BaseR_Cortex-R52Plus.

FVP_BaseR_Cortex-R52Plus instances

address_map_terminator

Type: [PVBusMapper](#).

address_swapper

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBusSlave](#).

bp.ap_refclk.busbase1

Type: [PVBusSlave](#).

bp.ap_refclk.busbase10

Type: [PVBusSlave](#).

bp.ap_refclk.busbase11

Type: [PVBusSlave](#).

bp.ap_refclk.busbase12

Type: [PVBusSlave](#).

bp.ap_refclk.busbase13

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase14

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase15

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase2

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase3

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase4

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase5

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase6

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase7

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase8

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase9

Type: [PVBUSSlave](#).

bp.ap_refclk.buscctlbase

Type: [PVBUSSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.hdlcd0.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.hdlcd0.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.hdlcd0_labeller

Type: `Labeller`.

bp.hdlcd0_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.hostbridge

Host Socket Interface Component.

Type: `HostBridge`.

bp.lcd_security_map

Type: `PVBusMapper`.

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: `LS64TestingFIFO`.

bp.ls64_testing_fifo.pvbusslave

Type: `PVBusSlave`.

bp.mmc

Generic Multimedia Card.

Type: `MMC`.

bp.mmc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.mmc.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.mmc.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.mmc.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: `PVMemoryProtectionEngine`.

bp.mpe.mapper

Type: `PVBusMapper`.

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: `IntelStrataFlashJ3`.

bp.nontrustedrom.map

Type: `PVBusMapper`.

bp.nontrustedrom.mbs

Type: `PVBusSlave`.

bp.nontrustedrom.rmbs

Type: `PVBusSlave`.

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: `FlashLoader`.

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.ns_dram.bus_slave

Type: `PVBusSlave`.

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: `PL011_Uart`.

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBusSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smc_91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBUSSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: `NonVolatileCounter`.

bp.trusted_nv_counter.pvbuslave

Type: `PVBusSlave`.

bp.trusted_rng

Random Number Generator unit.

Type: `RandomNumberGenerator`.

bp.trusted_rng.pvbuslave

Type: `PVBusSlave`.

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: `SP805_Watchdog`.

bp.trusted_watchdog.busslave

Type: `PVBusSlave`.

bp.trusted_watchdog.clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.trusted_watchdog.clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.tzc_400

TrustZone Address Space Controller.

Type: `TZC_400`.

bp.tzc_400.apbslave[0]

Type: `PVBusSlave`.

bp.tzc_400.filter0
Type: `filter0`.

bp.tzc_400.filter0.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter1
Type: `filter1`.

bp.tzc_400.filter1.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

bp.virtio_rng.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).

bp.virtio_blockdevice.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice_labeller

Type: [Labeller](#).

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

bp.virtio_p9device.mmio_slave

Type: [PVBusSlave](#).

bp.virtio_p9device.virtio_master

Type: [PVBusMaster](#).

bp.virtio_p9device_labeller

Type: [Labeller](#).

bp.virtio_p9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-R52Plus Cluster CT model.

Type: [Cluster_ARM_Cortex-R52Plus](#).

cluster0.AMU

Type: [PVBUSLogger](#).

cluster0.AMU.mapper

Type: [PVBUSMapper](#).

cluster0.gic_iri.rd_0_0_0_2
Type: `GICv3Redistributor`.

cluster0.gic_iri.rd_0_0_0_3
Type: `GICv3Redistributor`.

cluster0.gic_iri.rd_0_0_0_4
Type: `GICv3Redistributor`.

cluster0.gic_iri.rd_t1
Type: `GICv3Distributor`.

cluster0.l2_flusher
Type: `AsyncCacheFlushUnit`.

cluster0_labeller

Type: [Labeller](#).

cluster0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

dapmemlogger.mapper

Type: [PVBusMapper](#).

elfloader

ELF loader component.

Type: [ElfLoader](#).

elfloader.pvbus_busmaster

Type: [PVBusMaster](#).

flash_ram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

flash_ram0.bus_slave

Type: [PVBusSlave](#).

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

pctl.busslave

Type: [PVBusSlave](#).

pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

Type: [PVBusMaster](#).

13.2 FVP_BaseR_Cortex-R52x1

List of instances in FVP_BaseR_Cortex-R52x1.

FVP_BaseR_Cortex-R52x1 instances

address_map_terminator

Type: [PVBusMapper](#).

address_swapper

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBusSlave](#).

bp.ap_refclk.busbase1

Type: [PVBusSlave](#).

bp.ap_refclk.busbase10

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase8

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase9

Type: [PVBUSSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBUSSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBUSMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbsType: [PVBusSlave](#).**bp.flash0.rmbs**Type: [PVBusSlave](#).**bp.flash1**

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).**bp.flash1.map**Type: [PVBusMapper](#).**bp.flash1.mbs**Type: [PVBusSlave](#).**bp.flash1.rmbs**Type: [PVBusSlave](#).**bp.flashloader0**

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).**bp.flashloader1**

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).**bp.generic_watchdog**

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).**bp.generic_watchdog.busctlbase**Type: [PVBusSlave](#).**bp.generic_watchdog.busrefbase**Type: [PVBusSlave](#).**bp.hdlcd0**

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).**bp.hdlcd0.busmaster**Type: [PVBusMaster](#).**bp.hdlcd0.busslave**Type: [PVBusSlave](#).**bp.hdlcd0.timer**

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke

wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBusSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBusSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBusSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl1111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.r1_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave
Type: [PVBusSlave](#).

bp.rt_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.rt_dram.bus_slave
Type: [PVBusSlave](#).

bp.s_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.s_dram.bus_slave
Type: [PVBusSlave](#).

bp.secureDRAM
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.secureDRAM.bus_slave
Type: [PVBusSlave](#).

bp.secureSRAM
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.secureSRAM.bus_slave
Type: [PVBusSlave](#).

bp.secureSRAM_limiter
Type: [PVBusMapper](#).

bp.secureflash
Intel Strata Flash J3 LISA+ model.
Type: [IntelStrataFlashJ3](#).

bp.secureflash.map
Type: [PVBusMapper](#).

bp.secureflash.mbs
Type: [PVBusSlave](#).

bp.secureflash.rmbs
Type: [PVBusSlave](#).

bp.secureflashloader
A device that can preload a gzipped image into flash at startup.
Type: [FlashLoader](#).

bp.smsc_91c111
SMSC 91C111 ethernet controller.
Type: [SMSC_91C111](#).

bp.smsc_91c111.SMSC slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBusSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TzC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0
Type: `filter0`.

bp.tzc_400.filter0.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter1
Type: `filter1`.

bp.tzc_400.filter1.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

bp.virtio_rng.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).

bp.virtio_blockdevice.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice_labeller

Type: [Labeller](#).

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

bp.virtio_p9device.mmio_slave

Type: [PVBusSlave](#).

bp.virtio_p9device.virtio_master

Type: [PVBusMaster](#).

bp.virtio_p9device_labeller

Type: [Labeller](#).

bp.virtio_p9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM CortexR52 MP Cluster CT model.

Type: [Cluster_ARM_Cortex-R52](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

Type: GICv3RedistributorInternal.

cluster0.gic_iri.rd_0_0_0_0

Type: GICv3Redistributor.

cluster0.gic_iri.rd_0_0_0_1

Type: GICv3Redistributor.

cluster0.gic_iri.rd_tl

Type: GICv3Distributor.

cluster0.l2_flusher

Type: AsyncCacheFlushUnit.

cluster0_labeller

Type: Labeller.

cluster0_labeller.pvbusmodifier

Type: PVBusMapper.

dapmemlogger

Bus Logger.

Type: PVBusLogger.

dapmemlogger.mapper

Type: PVBusMapper.

elfloader

ELF loader component.

Type: ElfLoader.

elfloader.pvbus_busmaster

Type: PVBusMaster.

flash_ram0

RAM device, can be dynamic or static ram.

Type: RAMDevice.

flash_ram0.bus_slave

Type: PVBusSlave.

pctl

Base Platforms Power Controller.

Type: Base_PowerController.

pctl.busslave

Type: PVBusSlave.

pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBUSSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBUSSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBusSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave
Type: [PVBusSlave](#).

bp.refcounter
Memory Mapped Counter Module for Generic Timers.
Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]
Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]
Type: [PVBusSlave](#).

bp.reset_or
Or Gate.
Type: [OrGate](#).

bp.rl_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.rl_dram.bus_slave
Type: [PVBusSlave](#).

bp.rt_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.rt_dram.bus_slave
Type: [PVBusSlave](#).

bp.s_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.s_dram.bus_slave
Type: [PVBusSlave](#).

bp.secureDRAM
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.secureDRAM.bus_slave
Type: [PVBusSlave](#).

bp.secureSRAM
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.secureSRAM.bus_slave
Type: [PVBusSlave](#).

bp.secureSRAM_limiter
Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

bp.sm5c_91c111.SM5C_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

`bp.trusted_watchdog.clocktimer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`bp.trusted_watchdog.clocktimer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`bp.tzc_400`

TrustZone Address Space Controller.

Type: [TZC_400](#).

`bp.tzc_400.apbslave[0]`

Type: [PVBusSlave](#).

`bp.tzc_400.filter0`

Type: `filter0`.

`bp.tzc_400.filter0.BusMapper`

Type: [PVBusMapper](#).

`bp.tzc_400.filter1`

Type: `filter1`.

`bp.tzc_400.filter1.BusMapper`

Type: [PVBusMapper](#).

`bp.tzc_400.filter2`

Type: `filter2`.

`bp.tzc_400.filter2.BusMapper`

Type: [PVBusMapper](#).

`bp.tzc_400.filter3`

Type: `filter3`.

`bp.tzc_400.filter3.BusMapper`

Type: [PVBusMapper](#).

`bp.utility_bus_map0`

Type: [PVBusMapper](#).

`bp.utility_bus_map1`

Type: [PVBusMapper](#).

`bp.utility_bus_map2`

Type: [PVBusMapper](#).

bp.utility_bus_map3
Type: [PVBusMapper](#).

bp.ve_sysregs
Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave
Type: [PVBusSlave](#).

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: [vEDCC](#).

bp.virtio_net
VirtioNet device over MMIO transport.
Type: [VirtioNetMMIO](#).

bp.virtio_net.dma_master
Type: [PVBusMaster](#).

bp.virtio_net_labeller
Type: [Labeller](#).

bp.virtio_net_labeller.pvbusmodifier
Type: [PVBusMapper](#).

bp.virtio_rng
VirtioEntropy device over MMIO transport.
Type: [VirtioEntropyMMIO](#).

bp.virtio_rng.dma_master
Type: [PVBusMaster](#).

bp.virtio_blockdevice
VirtioBlock device over MMIO transport.
Type: [virtioBlockMMIO](#).

bp.virtio_blockdevice.dma_master
Type: [PVBusMaster](#).

bp.virtio_blockdevice_labeller
Type: [Labeller](#).

bp.virtio_blockdevice_labeller.pvbusmodifier
Type: [PVBusMapper](#).

bp.virtio_p9device
virtio P9 server.
Type: [VirtioP9Device](#).

bp.virtio_p9device.mmio_slave
Type: [PVBusSlave](#).

bp.virtio_p9device.virtio_master
Type: [PVBusMaster](#).

bp.virtiop9device_labeller

Type: [Labeller](#).

bp.virtiop9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM CortexR52 MP Cluster CT model.

Type: [Cluster_ARM_Cortex-R52](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

ELF loader component.

Type: [ElfLoader](#).**elfloader.pvbus_busmaster**Type: [PVBusMaster](#).**flash_ram0**

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).**flash_ram0.bus_slave**Type: [PVBusSlave](#).**pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).**pctl.busslave**Type: [PVBusSlave](#).**pctl.timer_reset**

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

pctl.timer_reset.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

pctl.timer_reset.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

pctl.timer_reset.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

pctl.utility_bus0

Type: `PVBusMaster`.

pctl.utility_bus1

Type: `PVBusMaster`.

pctl.utility_bus2

Type: `PVBusMaster`.

pctl.utility_bus3

Type: `PVBusMaster`.

13.4 FVP_BaseR_Cortex-R52x4

List of instances in `FVP_BaseR_Cortex-R52x4`.

FVP_BaseR_Cortex-R52x4 instances

address_map_terminator

Type: `PVBusMapper`.

address_swapper

Type: `PVBusMapper`.

bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

bp.Timer_0_1.busslave

Type: `PVBusSlave`.

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

bp.Timer_2_3.busslave

Type: `PVBusSlave`.

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBusSlave](#).

bp.ap_refclk.busbase1

Type: [PVBusSlave](#).

Type: [PVBusSlave](#).

bp.ap_refclk.busbase7

Type: [PVBusSlave](#).

bp.ap_refclk.busbase8

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase9

Type: [PVBUSSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBUSSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave
Type: [PVBusSlave](#).

bp.exclusive_monitor
Global exclusive monitor.
Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper
Type: [PVBusMapper](#).

bp.fixed_security_map
Type: [PVBusMapper](#).

bp.flash0
Intel Strata Flash J3 LISA+ model.
Type: [IntelStrataFlashJ3](#).

bp.flash0.map
Type: [PVBusMapper](#).

bp.flash0.mbs
Type: [PVBusSlave](#).

bp.flash0.rmbs
Type: [PVBusSlave](#).

Intel Strata Flash J3 LISA+ model.
Type: [IntelStrataFlashJ3](#).

bp.flash1.map
Type: [PVBusMapper](#).

bp.flash1.mbs
Type: [PVBusSlave](#).

bp.flash1.rmbs
Type: [PVBusSlave](#).

bp.flashloader0
A device that can preload a gzipped image into flash at startup.
Type: [FlashLoader](#).

bp.flashloader1
A device that can preload a gzipped image into flash at startup.
Type: [FlashLoader](#).

bp.generic_watchdog
ARM Generic Watchdog.
Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase
Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBusSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave
Type: [PVBusSlave](#).

bp.refcounter
Memory Mapped Counter Module for Generic Timers.
Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]
Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]
Type: [PVBusSlave](#).

bp.reset_or
Or Gate.
Type: [OrGate](#).

bp.rl_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.rl_dram.bus_slave
Type: [PVBusSlave](#).

bp.rt_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.rt_dram.bus_slave
Type: [PVBusSlave](#).

bp.s_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.s_dram.bus_slave
Type: [PVBusSlave](#).

bp.secureDRAM
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.secureDRAM.bus_slave
Type: [PVBusSlave](#).

bp.secureSRAM
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.secureSRAM.bus_slave
Type: [PVBusSlave](#).

bp.secureSRAM_limiter
Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

bp.sm5c_91c111.SM5C_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter2

Type: [filter2](#).

bp.tzc_400.filter2.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter3

Type: [filter3](#).

bp.tzc_400.filter3.BusMapper

Type: [PVBusMapper](#).

bp.utility_bus_map0

Type: [PVBusMapper](#).

bp.utility_bus_map1

Type: [PVBusMapper](#).

bp.utility_bus_map2

Type: [PVBusMapper](#).

bp.utility_bus_map3
Type: [PVBusMapper](#).

bp.ve_sysregs
Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave
Type: [PVBusSlave](#).

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: [vEDCC](#).

bp.virtio_net
VirtioNet device over MMIO transport.
Type: [VirtioNetMMIO](#).

bp.virtio_net.dma_master
Type: [PVBusMaster](#).

bp.virtio_net_labeller
Type: [Labeller](#).

bp.virtio_net_labeller.pvbusmodifier
Type: [PVBusMapper](#).

bp.virtio_rng
VirtioEntropy device over MMIO transport.
Type: [VirtioEntropyMMIO](#).

bp.virtio_rng.dma_master
Type: [PVBusMaster](#).

bp.virtio_blockdevice
VirtioBlock device over MMIO transport.
Type: [virtioBlockMMIO](#).

bp.virtio_blockdevice.dma_master
Type: [PVBusMaster](#).

bp.virtio_blockdevice_labeller
Type: [Labeller](#).

bp.virtio_blockdevice_labeller.pvbusmodifier
Type: [PVBusMapper](#).

bp.virtio_p9device
virtio P9 server.
Type: [VirtioP9Device](#).

bp.virtio_p9device.mmio_slave
Type: [PVBusSlave](#).

bp.virtio_p9device.virtio_master
Type: [PVBusMaster](#).

bp.virtiop9device_labeller

Type: [Labeller](#).

bp.virtiop9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM CortexR52 MP Cluster CT model.

Type: [cluster_ARM_Cortex-R52](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

cluster0.DAP

Type: [PVBusLogger](#).

cluster0.DAP.mapper

Type: [PVBusMapper](#).

cluster0.MMAP

Type: [PVBusLogger](#).

cluster0.MMAP.mapper

Type: [PVBusMapper](#).

cluster0.acp_mapper

Type: [PVBusMapper](#).

cluster0.cpu0

ARM CortexR52 MP CT model.

Type: [ARM_CortexR52](#).

cluster0.cpu0.UTLB

Type: [TLB](#).

cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

cluster0.cpu0.gicv3_cpu_if

Type: [GICv3CPUInterface](#).

cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

cluster0.cpu0.l1dcache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu0.l1icache

PV Cache.

Type: `PVCache`.**cluster0.cpu0.l1icache.upstream[0]**Type: `PVBusSlave`.**cluster0.cpu1**

ARM CortexR52 MP CT model.

Type: `ARM_CortexR52`.**cluster0.cpu1.UTLB**Type: `TLB`.**cluster0.cpu1.dtlb**

TLB - instruction, data or unified.

Type: `TlbCadi`.**cluster0.cpu1.gicv3_cpu_if**Type: `GICv3CPUInterface`.**cluster0.cpu1.l1dcache**

PV Cache.

Type: `PVCache`.**cluster0.cpu1.l1dcache.upstream[0]**Type: `PVBusSlave`.**cluster0.cpu1.l1icache**

PV Cache.

Type: `PVCache`.**cluster0.cpu1.l1icache.upstream[0]**Type: `PVBusSlave`.**cluster0.cpu2**

ARM CortexR52 MP CT model.

Type: `ARM_CortexR52`.**cluster0.cpu2.UTLB**Type: `TLB`.**cluster0.cpu2.dtlb**

TLB - instruction, data or unified.

Type: `TlbCadi`.**cluster0.cpu2.gicv3_cpu_if**Type: `GICv3CPUInterface`.**cluster0.cpu2.l1dcache**

PV Cache.

Type: `PVCache`.

cluster0.cpu2.l1dcache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu2.l1icache

PV Cache.

Type: [PVCache](#).

cluster0.cpu2.l1icache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu3

ARM CortexR52 MP CT model.

Type: [ARM_CortexR52](#).

cluster0.cpu3.UTLB

Type: [TLB](#).

cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: [Tlbcadi](#).

cluster0.cpu3.gicv3_cpu_if

Type: [GICv3CPUInterface](#).

cluster0.cpu3.l1dcache

PV Cache.

Type: [PVCache](#).

cluster0.cpu3.l1dcache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu3.l1icache

PV Cache.

Type: [PVCache](#).

Type: [PVBusLogger](#).

cluster0.ext_bus.mapper

Type: [PVBusMapper](#).

cluster0.gic_cpuif_decoder_cluster

Type: [GICv3CPUInterfaceDecoder](#).

cluster0.gic_iri

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

cluster0.gic_iri.rd_0

Type: [GICv3RedistributorInternal](#).

cluster0.gic_iri.rd_0_0

Type: GICv3RedistributorInternal.

cluster0.gic_iri.rd_0_0_0

Type: GICv3RedistributorInternal.

cluster0.gic_iri.rd_0_0_0_0

Type: GICv3Redistributor.

cluster0.gic_iri.rd_0_0_0_1

Type: GICv3Redistributor.

cluster0.gic_iri.rd_0_0_0_2

Type: GICv3Redistributor.

cluster0.gic_iri.rd_0_0_0_3

Type: GICv3Redistributor.

cluster0.gic_iri.rd_0_0_0_4

Type: GICv3Redistributor.

cluster0.gic_iri.rd_tl

Type: GICv3Distributor.

cluster0.l2_flusher

Type: AsyncCacheFlushUnit.

cluster0_labeller

Type: [Labeller](#).

cluster0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

dapmemlogger.mapper

Type: [PVBusMapper](#).

elfloader

ELF loader component.

Type: [ElfLoader](#).

elfloader.pvbus_busmaster

Type: [PVBusMaster](#).

flash_ram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

flash_ram0.bus_slave

Type: [PVBusSlave](#).

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

pctl.busslave

Type: [PVBusSlave](#).

pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

pctl.utility_bus3

Type: [PVBusMaster](#).

13.5 FVP_BaseR_Cortex-R82

List of instances in FVP_BaseR_Cortex-R82.

FVP_BaseR_Cortex-R82 instances

address_map_terminator

Type: [PVBusMapper](#).

address_remap_switch

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

address_remap_switch.pvbus_mapper

Type: [PVBusMapper](#).

address_swapper

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBusSlave](#).

bp.ap_refclk.busbase1

Type: [PVBusSlave](#).

bp.ap_refclk.busbase10

Type: [PVBusSlave](#).

bp.ap_refclk.busbase11

Type: [PVBusSlave](#).

bp.ap_refclk.busbase12

Type: [PVBusSlave](#).

bp.ap_refclk.busbase13

Type: [PVBusSlave](#).

bp.ap_refclk.busbase14

Type: [PVBusSlave](#).

bp.ap_refclk.busbase15

Type: [PVBusSlave](#).

bp.ap_refclk.busbase2

Type: [PVBusSlave](#).

bp.ap_refclk.busbase3

Type: [PVBusSlave](#).

bp.ap_refclk.busbase4

Type: [PVBusSlave](#).

bp.ap_refclk.busbase5

Type: [PVBusSlave](#).

bp.ap_refclk.busbase6

Type: [PVBusSlave](#).

bp.ap_refclk.busbase7

Type: [PVBusSlave](#).

bp.ap_refclk.busbase8

Type: [PVBusSlave](#).

bp.ap_refclk.busbase9

Type: [PVBusSlave](#).

bp.ap_refclk.buscctlbase

Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`bp.mmc.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`bp.mmc.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`bp.mpe`

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: `PVMemoryProtectionEngine`.

`bp.mpe.mapper`

Type: `PVBusMapper`.

`bp.nontrustedrom`

Intel Strata Flash J3 LISA+ model.

Type: `IntelStrataFlashJ3`.

`bp.nontrustedrom.map`

Type: `PVBusMapper`.

`bp.nontrustedrom.mbs`

Type: `PVBusSlave`.

`bp.nontrustedrom.rmbs`

Type: `PVBusSlave`.

`bp.nontrustedromloader`

A device that can preload a gzipped image into flash at startup.

Type: `FlashLoader`.

`bp.ns_dram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.ns_dram.bus_slave`

Type: `PVBusSlave`.

`bp.pl011_uart0`

ARM PrimeCell UART(PL011).

Type: `PL011_Uart`.

`bp.pl011_uart0.busslave`

Type: `PVBusSlave`.

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmb

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smc_91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBUSSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0
Type: filter0.

bp.tzc_400.filter0.BusMapper
Type: [PVBusMapper](#).

bp.tzc_400.filter1
Type: filter1.

bp.tzc_400.filter1.BusMapper
Type: [PVBusMapper](#).

bp.tzc_400.filter2
Type: filter2.

bp.tzc_400.filter2.BusMapper
Type: [PVBusMapper](#).

bp.tzc_400.filter3
Type: filter3.

bp.tzc_400.filter3.BusMapper
Type: [PVBusMapper](#).

bp.utility_bus_map0
Type: [PVBusMapper](#).

bp.utility_bus_map1
Type: [PVBusMapper](#).

bp.utility_bus_map2
Type: [PVBusMapper](#).

bp.utility_bus_map3
Type: [PVBusMapper](#).

bp.ve_sysregs
Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave
Type: [PVBusSlave](#).

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: [vEDCC](#).

bp.virtio_net
VirtioNet device over MMIO transport.
Type: [VirtioNetMMIO](#).

bp.virtio_net.dma_master
Type: [PVBusMaster](#).

bp.virtio_net_labeller
Type: [Labeller](#).

bp.virtio_net_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

bp.virtio_rng.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).

bp.virtio_blockdevice.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice_labeller

Type: [Labeller](#).

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

bp.virtio_p9device.mmio_slave

Type: [PVBusSlave](#).

bp.virtio_p9device.virtio_master

Type: [PVBusMaster](#).

bp.virtio_p9device_labeller

Type: [Labeller](#).

bp.virtio_p9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-R82 Cluster CT model.

Type: [Cluster_ARM_Cortex-R82](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: GICv3Distributor.

l1ram0
RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

l1ram0.bus_slave

Type: `PVBusSlave`.

pctl

Base Platforms Power Controller.

Type: `Base_PowerController`.

pctl.busslave

Type: `PVBusSlave`.

pctl.timer_reset

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

pctl.timer_reset.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

pctl.timer_reset.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

pctl.timer_reset.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

pctl.utility_bus0

Type: `PVBusMaster`.

pctl.utility_bus1

Type: `PVBusMaster`.

pctl.utility_bus2

Type: `PVBusMaster`.

pctl.utility_bus3

Type: `PVBusMaster`.

13.6 FVP_BaseR_Cortex-R82AE

List of instances in FVP_BaseR_Cortex-R82AE.

FVP_BaseR_Cortex-R82AE instances

address_map_terminator

Type: [PVBusMapper](#).

address_remap_switch

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

address_remap_switch.pvbus_mapper

Type: [PVBusMapper](#).

address_swapper

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBusSlave](#).

bp.ap_refclk.busbase1

Type: [PVBusSlave](#).

bp.ap_refclk.busbase10

Type: [PVBusSlave](#).

bp.ap_refclk.busbase11

Type: [PVBusSlave](#).

bp.ap_refclk.busbase12

Type: [PVBusSlave](#).

bp.ap_refclk.busbase13

Type: [PVBusSlave](#).

bp.ap_refclk.busbase14

Type: [PVBusSlave](#).

bp.ap_refclk.busbase15

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase2

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase3

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase4

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase5

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase6

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase7

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase8

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase9

Type: [PVBUSSlave](#).

bp.ap_refclk.buscctlbase

Type: [PVBUSSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave
Type: [PVBusSlave](#).

bp.dram_limiter
Type: [PVBusMapper](#).

bp.dummy_local_dap_rom
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave
Type: [PVBusSlave](#).

bp.dummy_ram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.dummy_ram.bus_slave
Type: [PVBusSlave](#).

bp.dummy_usb
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.dummy_usb.bus_slave
Type: [PVBusSlave](#).

bp.exclusive_monitor
Global exclusive monitor.
Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper
Type: [PVBusMapper](#).

bp.fixed_security_map
Type: [PVBusMapper](#).

bp.flash0
Intel Strata Flash J3 LISA+ model.
Type: [IntelStrataFlashJ3](#).

bp.flash0.map
Type: [PVBusMapper](#).

bp.flash0.mbs
Type: [PVBusSlave](#).

bp.flash0.rmbs
Type: [PVBusSlave](#).

bp.flash1
Intel Strata Flash J3 LISA+ model.
Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`bp.mmc.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`bp.mmc.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`bp.mpe`

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: `PVMemoryProtectionEngine`.

`bp.mpe.mapper`

Type: `PVBusMapper`.

`bp.nontrustedrom`

Intel Strata Flash J3 LISA+ model.

Type: `IntelStrataFlashJ3`.

`bp.nontrustedrom.map`

Type: `PVBusMapper`.

`bp.nontrustedrom.mbs`

Type: `PVBusSlave`.

`bp.nontrustedrom.rmbs`

Type: `PVBusSlave`.

`bp.nontrustedromloader`

A device that can preload a gzipped image into flash at startup.

Type: `FlashLoader`.

`bp.ns_dram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.ns_dram.bus_slave`

Type: `PVBusSlave`.

`bp.pl011_uart0`

ARM PrimeCell UART(PL011).

Type: `PL011_Uart`.

`bp.pl011_uart0.busslave`

Type: `PVBusSlave`.

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smc_91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBUSSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: `NonVolatileCounter`.

bp.trusted_nv_counter.pvbuslave

Type: `PVBusSlave`.

bp.trusted_rng

Random Number Generator unit.

Type: `RandomNumberGenerator`.

bp.trusted_rng.pvbuslave

Type: `PVBusSlave`.

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: `SP805_Watchdog`.

bp.trusted_watchdog.busslave

Type: `PVBusSlave`.

bp.trusted_watchdog.clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.trusted_watchdog.clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.tzc_400

TrustZone Address Space Controller.

Type: `TZC_400`.

bp.tzc_400.apbslave[0]

Type: `PVBusSlave`.

bp.tzc_400.filter0
Type: `filter0`.

bp.tzc_400.filter0.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter1
Type: `filter1`.

bp.tzc_400.filter1.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

bp.virtio_rng.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).

bp.virtio_blockdevice.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice_labeller

Type: [Labeller](#).

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

gic_distributor.rd_t1
Type: GICv3Distributor.

l1ram0
RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

l1ram0.bus_slave

Type: `PVBusSlave`.

pctl

Base Platforms Power Controller.

Type: `Base_PowerController`.

pctl.busslave

Type: `PVBusSlave`.

pctl.timer_reset

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

pctl.timer_reset.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

pctl.timer_reset.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

pctl.timer_reset.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

pctl.utility_bus0

Type: `PVBusMaster`.

pctl.utility_bus1

Type: `PVBusMaster`.

pctl.utility_bus2

Type: `PVBusMaster`.

pctl.utility_bus3

Type: `PVBusMaster`.

13.7 FVP_BaseR_Cortex-R82x1

List of instances in FVP_BaseR_Cortex-R82x1.

FVP_BaseR_Cortex-R82x1 instances

address_map_terminator

Type: [PVBusMapper](#).

address_remap_switch

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

address_remap_switch.pvbus_mapper

Type: [PVBusMapper](#).

address_swapper

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBusSlave](#).

bp.ap_refclk.busbase1

Type: [PVBusSlave](#).

bp.ap_refclk.busbase10

Type: [PVBusSlave](#).

bp.ap_refclk.busbase11

Type: [PVBusSlave](#).

bp.ap_refclk.busbase12

Type: [PVBusSlave](#).

bp.ap_refclk.busbase13

Type: [PVBusSlave](#).

bp.ap_refclk.busbase14

Type: [PVBusSlave](#).

bp.ap_refclk.busbase15

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase3

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase4

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase5

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase6

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase7

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase8

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase9

Type: [PVBUSSlave](#).

bp.ap_refclk.buscctlbase

Type: [PVBUSSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave
Type: [PVBusSlave](#).

bp.dram_limiter
Type: [PVBusMapper](#).

bp.dummy_local_dap_rom
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave
Type: [PVBusSlave](#).

bp.dummy_ram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.dummy_ram.bus_slave
Type: [PVBusSlave](#).

bp.dummy_usb
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.dummy_usb.bus_slave
Type: [PVBusSlave](#).

bp.exclusive_monitor
Global exclusive monitor.
Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper
Type: [PVBusMapper](#).

bp.fixed_security_map
Type: [PVBusMapper](#).

bp.flash0
Intel Strata Flash J3 LISA+ model.
Type: [IntelStrataFlashJ3](#).

bp.flash0.map
Type: [PVBusMapper](#).

bp.flash0.mbs
Type: [PVBusSlave](#).

bp.flash0.rmbs
Type: [PVBusSlave](#).

bp.flash1
Intel Strata Flash J3 LISA+ model.
Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`bp.mmc.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`bp.mmc.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`bp.mpe`

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: `PVMemoryProtectionEngine`.

`bp.mpe.mapper`

Type: `PVBusMapper`.

`bp.nontrustedrom`

Intel Strata Flash J3 LISA+ model.

Type: `IntelStrataFlashJ3`.

`bp.nontrustedrom.map`

Type: `PVBusMapper`.

`bp.nontrustedrom.mbs`

Type: `PVBusSlave`.

`bp.nontrustedrom.rmbs`

Type: `PVBusSlave`.

`bp.nontrustedromloader`

A device that can preload a gzipped image into flash at startup.

Type: `FlashLoader`.

`bp.ns_dram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.ns_dram.bus_slave`

Type: `PVBusSlave`.

`bp.pl011_uart0`

ARM PrimeCell UART(PL011).

Type: `PL011_Uart`.

`bp.pl011_uart0.busslave`

Type: `PVBusSlave`.

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmb

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smc_91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBUSSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TzC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0
Type: `filter0`.

bp.tzc_400.filter0.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter1
Type: `filter1`.

bp.tzc_400.filter1.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifierType: [PVBusMapper](#).**bp.virtio_rng**

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).**bp.virtio_rng.dma_master**Type: [PVBusMaster](#).**bp.virtio_blockdevice**

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).**bp.virtio_blockdevice.dma_master**Type: [PVBusMaster](#).**bp.virtio_blockdevice_labeller**Type: [Labeller](#).**bp.virtio_blockdevice_labeller.pvbusmodifier**Type: [PVBusMapper](#).**bp.virtio_p9device**

virtio P9 server.

Type: [VirtioP9Device](#).**bp.virtio_p9device.mmio_slave**Type: [PVBusSlave](#).**bp.virtio_p9device.virtio_master**Type: [PVBusMaster](#).**bp.virtio_p9device_labeller**Type: [Labeller](#).**bp.virtio_p9device_labeller.pvbusmodifier**Type: [PVBusMapper](#).**bp.vis**

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).**bp.vis.recorder**

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).**bp.vis.recorder.playbackDivider**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-R82 Cluster CT model.

Type: [Cluster_ARM_Cortex-R82](#).

cluster0.AMU

Type: [PVBUSLogger](#).

cluster0.AMU.mapper

Type: [PVBUSMapper](#).

cluster0.DAP

Type: [PVBUSLogger](#).

cluster0.DAP.mapper

Type: [PVBUSMapper](#).

cluster0.DSU

Type: DSU.

cluster0.DSU.PPU_cluster

Type: PPUv1.

cluster0.DSU.PPU_cluster.busslave

Type: PVBusSlave.

cluster0.DSU.PPU_core0

Type: PPUv1.

cluster0.DSU.PPU_core0.busslave

Type: PVBusSlave.

cluster0.DSU.utility_slave[0]

Type: PVBusSlave.

cluster0.MMAP

Type: PVBusLogger.

cluster0.MMAP.mapper

Type: PVBusMapper.

cluster0.cpu0

ARM Cortex-R82 CT model.

Type: ARM_Cortex-R82.

cluster0.cpu0.UTLB

Type: TLB.

cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

cluster0.cpu0.gicv3_cpu_if

Type: GICv3CPUInterface.

cluster0.cpu0.l1dcache

PV Cache.

Type: Pvcache.

cluster0.cpu0.l1dcache.upstream[0]

Type: PVBusSlave.

cluster0.cpu0.l1icache

PV Cache.

Type: Pvcache.

cluster0.cpu0.l1icache.upstream[0]

Type: PVBusSlave.

cluster0.ext_bus

Type: PVBusLogger.

cluster0.ext_bus.mapper

Type: [PVBusMapper](#).

cluster0.gic_cpuif_decoder_cluster

Type: [GICv3CPUInterfaceDecoder](#).

cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

cluster0.l2_cache.upstream[0]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[10]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[11]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[12]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[13]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[14]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[15]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[16]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[1]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[2]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[3]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[4]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[5]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[6]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[7]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[8]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[9]

Type: [PVBusSlave](#).

cluster0_labeller

Type: [Labeller](#).

cluster0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

dapmemlogger.mapper

Type: [PVBusMapper](#).

elfloader

ELF loader component.

Type: [ElfLoader](#).

elfloader.pvbus_busmaster

Type: [PVBusMaster](#).

gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

gic_distributor.rd_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0_0_0

Type: [GICv3Redistributor](#).

gic_distributor.rd_t1

Type: [GICv3Distributor](#).

l1ram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

l1ram0.bus_slave

Type: [PVBusSlave](#).

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

pctl.busslave

Type: [PVBusSlave](#).

pctl.timer_reset

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

pctl.utility_bus3

Type: [PVBusMaster](#).

13.8 FVP_BaseR_Cortex-R82x2

List of instances in FVP_BaseR_Cortex-R82x2.

FVP_BaseR_Cortex-R82x2 instances

address_map_terminator

Type: [PVBusMapper](#).

address_remap_switch

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

address_remap_switch.pvbus_mapper

Type: [PVBusMapper](#).

address_swapper

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBUSSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase1

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase10

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase11

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase12

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase13

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase14

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase15

Type: [PVBusSlave](#).

bp.ap_refclk.busbase2

Type: [PVBusSlave](#).

bp.ap_refclk.busbase3

Type: [PVBusSlave](#).

bp.ap_refclk.busbase4

Type: [PVBusSlave](#).

bp.ap_refclk.busbase5

Type: [PVBusSlave](#).

bp.ap_refclk.busbase6

Type: [PVBusSlave](#).

bp.ap_refclk.busbase7

Type: [PVBusSlave](#).

bp.ap_refclk.busbase8

Type: [PVBusSlave](#).

bp.ap_refclk.busbase9

Type: [PVBusSlave](#).

bp.ap_refclk.buscctlbase

Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave
Type: [PVBusSlave](#).

bp.dram_limiter
Type: [PVBusMapper](#).

bp.dummy_local_dap_rom
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave
Type: [PVBusSlave](#).

bp.dummy_ram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.dummy_ram.bus_slave
Type: [PVBusSlave](#).

bp.dummy_usb
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.dummy_usb.bus_slave
Type: [PVBusSlave](#).

bp.exclusive_monitor
Global exclusive monitor.
Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper
Type: [PVBusMapper](#).

bp.fixed_security_map
Type: [PVBusMapper](#).

bp.flash0
Intel Strata Flash J3 LISA+ model.
Type: [IntelStrataFlashJ3](#).

bp.flash0.map
Type: [PVBusMapper](#).

bp.flash0.mbs
Type: [PVBusSlave](#).

bp.flash0.rmbs
Type: [PVBusSlave](#).

bp.flash1
Intel Strata Flash J3 LISA+ model.
Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`bp.mmc.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`bp.mmc.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`bp.mpe`

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: `PVMemoryProtectionEngine`.

`bp.mpe.mapper`

Type: `PVBusMapper`.

`bp.nontrustedrom`

Intel Strata Flash J3 LISA+ model.

Type: `IntelStrataFlashJ3`.

`bp.nontrustedrom.map`

Type: `PVBusMapper`.

`bp.nontrustedrom.mbs`

Type: `PVBusSlave`.

`bp.nontrustedrom.rmbs`

Type: `PVBusSlave`.

`bp.nontrustedromloader`

A device that can preload a gzipped image into flash at startup.

Type: `FlashLoader`.

`bp.ns_dram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.ns_dram.bus_slave`

Type: `PVBusSlave`.

`bp.pl011_uart0`

ARM PrimeCell UART(PL011).

Type: `PL011_Uart`.

`bp.pl011_uart0.busslave`

Type: `PVBusSlave`.

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmb

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smc_91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBUSSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: `NonVolatileCounter`.

bp.trusted_nv_counter.pvbuslave

Type: `PVBusSlave`.

bp.trusted_rng

Random Number Generator unit.

Type: `RandomNumberGenerator`.

bp.trusted_rng.pvbuslave

Type: `PVBusSlave`.

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: `SP805_Watchdog`.

bp.trusted_watchdog.busslave

Type: `PVBusSlave`.

bp.trusted_watchdog.clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.trusted_watchdog.clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.tzc_400

TrustZone Address Space Controller.

Type: `TZC_400`.

bp.tzc_400.apbslave[0]

Type: `PVBusSlave`.

bp.tzc_400.filter0
Type: `filter0`.

bp.tzc_400.filter0.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter1
Type: `filter1`.

bp.tzc_400.filter1.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

bp.virtio_rng.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).

bp.virtio_blockdevice.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice_labeller

Type: [Labeller](#).

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

bp.virtio_p9device.mmio_slave

Type: [PVBusSlave](#).

bp.virtio_p9device.virtio_master

Type: [PVBusMaster](#).

bp.virtio_p9device_labeller

Type: [Labeller](#).

bp.virtio_p9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-R82 Cluster CT model.

Type: [Cluster_ARM_Cortex-R82](#).

cluster0.AMU

Type: [PVBUSLogger](#).

cluster0.AMU.mapper

Type: [PVBUSMapper](#).

cluster0.DAP

Type: [PVBUSLogger](#).

cluster0.DAP.mapper

Type: [PVBUSMapper](#).

cluster0.DSU

Type: DSU.

cluster0.DSU.PPU_cluster

Type: PPUv1.

cluster0.DSU.PPU_cluster.busslave

Type: PVBusSlave.

cluster0.DSU.PPU_core0

Type: PPUv1.

cluster0.DSU.PPU_core0.busslave

Type: PVBusSlave.

cluster0.DSU.PPU_core1

Type: PPUv1.

cluster0.DSU.PPU_core1.busslave

Type: PVBusSlave.

cluster0.DSU.utility_slave[0]

Type: PVBusSlave.

cluster0.MMAP

Type: PVBusLogger.

cluster0.MMAP.mapper

Type: PVBusMapper.

cluster0.cpu0

ARM Cortex-R82 CT model.

Type: ARM_Cortex-R82.

cluster0.cpu0.UTLB

Type: TLB.

cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

cluster0.cpu0.gicv3_cpu_if

Type: GICv3CPUInterface.

cluster0.cpu0.l1dcache

PV Cache.

Type: PVCache.

cluster0.cpu0.l1dcache.upstream[0]

Type: PVBusSlave.

cluster0.cpu0.l1icache

PV Cache.

Type: PVCache.

cluster0.cpu0.l1icache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu1

ARM Cortex-R82 CT model.

Type: [ARM_Cortex-R82](#).

cluster0.cpu1.UTLB

Type: TLB.

cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

cluster0.cpu1.gicv3_cpu_if

Type: GICv3CPUInterface.

cluster0.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

cluster0.cpu1.l1dcache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

cluster0.cpu1.l1icache.upstream[0]

Type: [PVBusSlave](#).

cluster0.ext_bus

Type: [PVBusLogger](#).

cluster0.ext_bus.mapper

Type: [PVBusMapper](#).

cluster0.gic_cpuif_decoder_cluster

Type: GICv3CPUInterfaceDecoder.

cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

cluster0.l2_cache.upstream[0]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[10]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[11]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[12]

Type: [PVBusSlave](#).

cluster0.12_cache.upstream[13]

Type: [PVBusSlave](#).

cluster0.12_cache.upstream[14]

Type: [PVBusSlave](#).

cluster0.12_cache.upstream[15]

Type: [PVBusSlave](#).

cluster0.12_cache.upstream[16]

Type: [PVBusSlave](#).

cluster0.12_cache.upstream[1]

Type: [PVBusSlave](#).

cluster0.12_cache.upstream[2]

Type: [PVBusSlave](#).

cluster0.12_cache.upstream[3]

Type: [PVBusSlave](#).

cluster0.12_cache.upstream[4]

Type: [PVBusSlave](#).

cluster0.12_cache.upstream[5]

Type: [PVBusSlave](#).

cluster0.12_cache.upstream[6]

Type: [PVBusSlave](#).

cluster0.12_cache.upstream[7]

Type: [PVBusSlave](#).

cluster0.12_cache.upstream[8]

Type: [PVBusSlave](#).

cluster0.12_cache.upstream[9]

Type: [PVBusSlave](#).

cluster0_labeller

Type: [Labeller](#).

cluster0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

dapmemlogger.mapper

Type: [PVBusMapper](#).

elfloader

ELF loader component.

Type: [ElfLoader](#).

elfloader.pvbus_busmasterType: [PVBusMaster](#).**gic_distributor**

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).**gic_distributor.rd_0**Type: [GICv3RedistributorInternal](#).**gic_distributor.rd_0_0**Type: [GICv3RedistributorInternal](#).**gic_distributor.rd_0_0_0**Type: [GICv3RedistributorInternal](#).**gic_distributor.rd_0_0_0_0**Type: [GICv3Redistributor](#).**gic_distributor.rd_0_0_1**Type: [GICv3RedistributorInternal](#).**gic_distributor.rd_0_0_1_0**Type: [GICv3Redistributor](#).**gic_distributor.rd_tl**Type: [GICv3Distributor](#).**l1ram0**

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).**l1ram0.bus_slave**Type: [PVBusSlave](#).**pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).**pctl.busslave**Type: [PVBusSlave](#).**pctl.timer_reset**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

pctl.utility_bus3

Type: [PVBusMaster](#).

13.9 FVP_BaseR_Cortex-R82x4

List of instances in FVP_BaseR_Cortex-R82x4.

FVP_BaseR_Cortex-R82x4 instances

address_map_terminator

Type: [PVBusMapper](#).

address_remap_switch

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

address_remap_switch.pvbus_mapper

Type: [PVBusMapper](#).

address_swapper

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

bp.Timer_0_1.busslave

Type: `PVBusSlave`.

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

bp.Timer_2_3.busslave

Type: `PVBusSlave`.

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBusSlave](#).

bp.ap_refclk.busbase1

Type: [PVBusSlave](#).

bp.ap_refclk.busbase10

Type: [PVBusSlave](#).

bp.ap_refclk.busbase11

Type: [PVBusSlave](#).

bp.ap_refclk.busbase12

Type: [PVBusSlave](#).

bp.ap_refclk.busbase13

Type: [PVBusSlave](#).

bp.ap_refclk.busbase14

Type: [PVBusSlave](#).

bp.ap_refclk.busbase15

Type: [PVBusSlave](#).

bp.ap_refclk.busbase2

Type: [PVBusSlave](#).

bp.ap_refclk.busbase3

Type: [PVBusSlave](#).

bp.ap_refclk.busbase4

Type: [PVBusSlave](#).

bp.ap_refclk.busbase5

Type: [PVBusSlave](#).

bp.ap_refclk.busbase6

Type: [PVBusSlave](#).

bp.ap_refclk.busbase7

Type: [PVBusSlave](#).

bp.ap_refclk.busbase8

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase9

Type: [PVBUSSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBUSSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave
Type: [PVBusSlave](#).

bp.exclusive_monitor
Global exclusive monitor.
Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper
Type: [PVBusMapper](#).

bp.fixed_security_map
Type: [PVBusMapper](#).

bp.flash0
Intel Strata Flash J3 LISA+ model.
Type: [IntelStrataFlashJ3](#).

bp.flash0.map
Type: [PVBusMapper](#).

bp.flash0.mbs
Type: [PVBusSlave](#).

bp.flash0.rmbs
Type: [PVBusSlave](#).

bp.flash1
Intel Strata Flash J3 LISA+ model.
Type: [IntelStrataFlashJ3](#).

bp.flash1.map
Type: [PVBusMapper](#).

bp.flash1.mbs
Type: [PVBusSlave](#).

bp.flash1.rmbs
Type: [PVBusSlave](#).

bp.flashloader0
A device that can preload a gzipped image into flash at startup.
Type: [FlashLoader](#).

bp.flashloader1
A device that can preload a gzipped image into flash at startup.
Type: [FlashLoader](#).

bp.generic_watchdog
ARM Generic Watchdog.
Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase
Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBusSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.pl031_rtc.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.pl031_rtc.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: `PL041_AACI`.

bp.pl041_aaci.busslave

Type: `PVBusSlave`.

bp.pl041_aaci.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.pl041_aaci.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.pl041_aaci.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.pl041_aaci.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave
Type: [PVBusSlave](#).

bp.refcounter
Memory Mapped Counter Module for Generic Timers.
Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]
Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]
Type: [PVBusSlave](#).

bp.reset_or
Or Gate.
Type: [OrGate](#).

bp.rl_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.rl_dram.bus_slave
Type: [PVBusSlave](#).

bp.rt_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.rt_dram.bus_slave
Type: [PVBusSlave](#).

bp.s_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.s_dram.bus_slave
Type: [PVBusSlave](#).

bp.secureDRAM
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.secureDRAM.bus_slave
Type: [PVBusSlave](#).

bp.secureSRAM
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.secureSRAM.bus_slave
Type: [PVBusSlave](#).

bp.secureSRAM_limiter
Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

bp.sm5c_91c111.SM5C_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

`bp.trusted_watchdog.clocktimer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`bp.trusted_watchdog.clocktimer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`bp.tzc_400`

TrustZone Address Space Controller.

Type: [TZC_400](#).

`bp.tzc_400.apbslave[0]`

Type: [PVBusSlave](#).

`bp.tzc_400.filter0`

Type: `filter0`.

`bp.tzc_400.filter0.BusMapper`

Type: [PVBusMapper](#).

`bp.tzc_400.filter1`

Type: `filter1`.

`bp.tzc_400.filter1.BusMapper`

Type: [PVBusMapper](#).

`bp.tzc_400.filter2`

Type: `filter2`.

`bp.tzc_400.filter2.BusMapper`

Type: [PVBusMapper](#).

`bp.tzc_400.filter3`

Type: `filter3`.

`bp.tzc_400.filter3.BusMapper`

Type: [PVBusMapper](#).

`bp.utility_bus_map0`

Type: [PVBusMapper](#).

`bp.utility_bus_map1`

Type: [PVBusMapper](#).

`bp.utility_bus_map2`

Type: [PVBusMapper](#).

bp.utility_bus_map3
Type: [PVBusMapper](#).

bp.ve_sysregs
Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave
Type: [PVBusSlave](#).

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: [vEDCC](#).

bp.virtio_net
VirtioNet device over MMIO transport.
Type: [VirtioNetMMIO](#).

bp.virtio_net.dma_master
Type: [PVBusMaster](#).

bp.virtio_net_labeller
Type: [Labeller](#).

bp.virtio_net_labeller.pvbusmodifier
Type: [PVBusMapper](#).

bp.virtio_rng
VirtioEntropy device over MMIO transport.
Type: [VirtioEntropyMMIO](#).

bp.virtio_rng.dma_master
Type: [PVBusMaster](#).

bp.virtio_blockdevice
VirtioBlock device over MMIO transport.
Type: [virtioBlockMMIO](#).

bp.virtio_blockdevice.dma_master
Type: [PVBusMaster](#).

bp.virtio_blockdevice_labeller
Type: [Labeller](#).

bp.virtio_blockdevice_labeller.pvbusmodifier
Type: [PVBusMapper](#).

bp.virtio_p9device
virtio P9 server.
Type: [VirtioP9Device](#).

bp.virtio_p9device.mmio_slave
Type: [PVBusSlave](#).

bp.virtio_p9device.virtio_master
Type: [PVBusMaster](#).

bp.virtiop9device_labeller

Type: [Labeller](#).

bp.virtiop9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-R82 Cluster CT model.

Type: [cluster_ARM_Cortex-R82](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

cluster0.DAP

Type: [PVBusLogger](#).

Type: [PPUv1](#).

cluster0.DSU.PPU_core1.busslave

Type: [PVBusSlave](#).

cluster0.DSU.PPU_core2

Type: [PPUv1](#).

cluster0.DSU.PPU_core2.busslave

Type: [PVBusSlave](#).

cluster0.DSU.PPU_core3

Type: [PPUv1](#).

cluster0.DSU.PPU_core3.busslave

Type: [PVBusSlave](#).

cluster0.DSU.utility_slave[0]

Type: [PVBusSlave](#).

cluster0.MMAP

Type: [PVBusLogger](#).

cluster0.MMAP.mapper

Type: [PVBusMapper](#).

cluster0.cpu0

ARM Cortex-R82 CT model.

Type: [ARM_Cortex-R82](#).

cluster0.cpu0.UTLB

Type: TLB.

cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

cluster0.cpu0.gicv3_cpu_if

Type: [GICv3CPUInterface](#).

cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

cluster0.cpu0.l1dcache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

cluster0.cpu0.l1icache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu1

ARM Cortex-R82 CT model.

Type: [ARM_Cortex-R82](#).

cluster0.cpu1.UTLB

Type: TLB.

cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

cluster0.cpu1.gicv3_cpu_if

Type: [GICv3CPUInterface](#).

cluster0.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

cluster0.cpu1.l1dcache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

cluster0.cpu1.l1icache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu2

ARM Cortex-R82 CT model.

Type: [ARM_Cortex-R82](#).

cluster0.cpu2.UTLB

Type: [TLB](#).

cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: [Tlbcadi](#).

cluster0.cpu2.gicv3_cpu_if

Type: [GICv3CPUInterface](#).

cluster0.cpu2.l1dcache

PV Cache.

Type: [PVCache](#).

cluster0.cpu2.l1dcache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu2.l1icache

PV Cache.

Type: [PVCache](#).

cluster0.cpu2.l1icache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu3

ARM Cortex-R82 CT model.

Type: [ARM_Cortex-R82](#).

cluster0.cpu3.UTLB

Type: [TLB](#).

cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: [Tlbcadi](#).

cluster0.cpu3.gicv3_cpu_if

Type: [GICv3CPUInterface](#).

cluster0.cpu3.l1dcache

PV Cache.

Type: `PVCache`.

cluster0.cpu3.l1dcache.upstream[0]
Type: `PVBusSlave`.

cluster0.cpu3.l1icache
PV Cache.
Type: `PVCache`.

cluster0.cpu3.l1icache.upstream[0]
Type: `PVBusSlave`.

cluster0.ext_bus
Type: `PVBusLogger`.

cluster0.ext_bus.mapper
Type: `PVBusMapper`.

cluster0.gic_cpuif_decoder_cluster
Type: `GICv3CPUInterfaceDecoder`.

cluster0.l2_cache
PV Cache.
Type: `PVCache`.

cluster0.l2_cache.upstream[0]
Type: `PVBusSlave`.

cluster0.l2_cache.upstream[10]
Type: `PVBusSlave`.

cluster0.l2_cache.upstream[11]
Type: `PVBusSlave`.

cluster0.l2_cache.upstream[12]
Type: `PVBusSlave`.

cluster0.l2_cache.upstream[13]
Type: `PVBusSlave`.

cluster0.l2_cache.upstream[14]
Type: `PVBusSlave`.

cluster0.l2_cache.upstream[15]
Type: `PVBusSlave`.

cluster0.l2_cache.upstream[16]
Type: `PVBusSlave`.

cluster0.l2_cache.upstream[1]
Type: `PVBusSlave`.

cluster0.l2_cache.upstream[2]
Type: `PVBusSlave`.

cluster0.l2_cache.upstream[3]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[4]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[5]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[6]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[7]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[8]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[9]

Type: [PVBusSlave](#).

cluster0_labeller

Type: [Labeller](#).

cluster0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

dapmemlogger.mapper

Type: [PVBusMapper](#).

elfloader

ELF loader component.

Type: [ElfLoader](#).

elfloader.pvbus_busmaster

Type: [PVBusMaster](#).

gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

gic_distributor.rd_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0_0_0

Type: GICv3Redistributor.

gic_distributor.rd_0_0_1

Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0_1_0

Type: GICv3Redistributor.

gic_distributor.rd_0_0_2

Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0_2_0

Type: GICv3Redistributor.

gic_distributor.rd_0_0_3

Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0_3_0

Type: GICv3Redistributor.

gic_distributor.rd_tl

Type: GICv3Distributor.

llram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).**llram0.bus_slave**Type: [PVBusSlave](#).**pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).**pctl.busslave**Type: [PVBusSlave](#).**pctl.timer_reset**

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).**pctl.timer_reset.timer**

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

pctl.utility_bus3

Type: [PVBusMaster](#).

14. VE Platform FVPs

This chapter describes the VE Platform FVPs contained in the FVP Standard Library.

For the VE memory maps, see [VE memory map for Cortex-A series](#) and [VE memory map for Cortex-R series](#) in the Fast Models Reference Guide.

14.1 FVP_VE_Cortex-A15x1

List of instances in FVP_VE_Cortex-A15x1.

FVP_VE_Cortex-A15x1 instances

cluster

ARM Cortex-A15 Cluster CT model.

Type: `Cluster_ARM_Cortex-A15`.

cluster.Cortex-A15_GIC

Type: `GICv2`.

cluster.acp_mapper

Type: `PVBusMapper`.

cluster.cpu0

ARM Cortex-A15 CT model.

Type: `ARM_Cortex-A15`.

cluster.cpu0.DTLB

Type: `TLB`.

cluster.cpu0.ITLB

Type: `TLB`.

cluster.cpu0.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

cluster.cpu0.itlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

cluster.cpu0.l1dcache

PV Cache.

Type: `PVCache`.

cluster.cpu0.l1dcache.upstream[0]

Type: `PVBusSlave`.

cluster.cpu0.l1icache

PV Cache.

Type: `PVCache`.

`cluster.cpu0.l1icache.upstream[0]`

Type: `PVBusSlave`.

`cluster.ext_bus`

Type: `PVBusLogger`.

`cluster.ext_bus.mapper`

Type: `PVBusMapper`.

`cluster.l2_cache`

PV Cache.

Type: `PVCache`.

`cluster.l2_cache.upstream[0]`

Type: `PVBusSlave`.

`cluster.l2_cache.upstream[10]`

Type: `PVBusSlave`.

`cluster.l2_cache.upstream[11]`

Type: `PVBusSlave`.

`cluster.l2_cache.upstream[12]`

Type: `PVBusSlave`.

`cluster.l2_cache.upstream[13]`

Type: `PVBusSlave`.

`cluster.l2_cache.upstream[14]`

Type: `PVBusSlave`.

`cluster.l2_cache.upstream[15]`

Type: `PVBusSlave`.

`cluster.l2_cache.upstream[16]`

Type: `PVBusSlave`.

`cluster.l2_cache.upstream[1]`

Type: `PVBusSlave`.

`cluster.l2_cache.upstream[2]`

Type: `PVBusSlave`.

`cluster.l2_cache.upstream[3]`

Type: `PVBusSlave`.

`cluster.l2_cache.upstream[4]`

Type: `PVBusSlave`.

`cluster.l2_cache.upstream[5]`

Type: `PVBusSlave`.

`cluster.l2_cache.upstream[6]`

Type: `PVBusSlave`.

cluster.l2_cache.upstream[7]

Type: [PVBusSlave](#).

cluster.l2_cache.upstream[8]

Type: [PVBusSlave](#).

cluster.l2_cache.upstream[9]

Type: [PVBusSlave](#).

cluster.l2_flusher

Type: [AsyncCacheFlushUnit](#).

daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.coresight_mapper

Type: [PVBusMapper](#).

daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc.bus_slave

Type: [PVBusSlave](#).

daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc_phy.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_aliased.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_4.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_8.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

daughterboard.hdlcd.busmaster

Type: [PVBusMaster](#).

daughterboard.hdlcd.busslave

Type: [PVBusSlave](#).

daughterboard.hdlcd.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

daughterboard.hdlcd.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.nonsecure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureDRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmbs

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

globalcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

globalcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_0_1.busslave

Type: [PVBusSlave](#).

motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_2_3.busslave

Type: [PVBUSSlave](#).

motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock35MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock50Hz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clockCLCD`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.dummy_local_dap_rom`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_local_dap_rom.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.dummy_ram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_ram.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.dummy_usb`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_usb.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.flash0`

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

`motherboard.flash0.map`

Type: [PVBUSMapper](#).

motherboard.flash0.mbs

Type: [PVBUSSlave](#).

motherboard.flash0.rmbs

Type: [PVBUSSlave](#).

motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash1.map

Type: [PVBUSMapper](#).

motherboard.flash1.mbs

Type: [PVBUSSlave](#).

motherboard.flash1.rmbs

Type: [PVBUSSlave](#).

motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

motherboard.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

motherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

`motherboard.mmc.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.mmc.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart0`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart0.busslave`

Type: [PVBusSlave](#).

`motherboard.pl011_uart0.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart0.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart0.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart0.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart0.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart1.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart2.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart2.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart2.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart2.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart2.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart3`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart3.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl011_uart3.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart3.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

motherboard.pl031_rtc.busslave

Type: [PVBUSSlave](#).

motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl031_rtc.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl041_aaci`

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

`motherboard.pl041_aaci.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl041_aaci.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl041_aaci.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl041_aaci.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl041_aaci.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl050_kmi0`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

`motherboard.pl050_kmi0.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl050_kmi0.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

motherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

motherboard.pl180_mci.busslave

Type: [PVBusSlave](#).

motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.psram.bus_slave

Type: [PVBusSlave](#).

motherboard.smisc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

motherboard.smisc_91c111.SMISC_slave

Type: [PVBusSlave](#).

motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

motherboard.sp805_wdog.busslave

Type: [PVBUSSlave](#).

motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

motherboard.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk2`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk3`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.terminal_0`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_1`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_2`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_3`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.ve_sysregs`

Type: [VE_SysRegs](#).

`motherboard.ve_sysregs.busslave`

Type: [PVBusSlave](#).

`motherboard.virtioblockdevice`

virtio block device.

Type: [VirtioBlockDevice](#).

`motherboard.virtioblockdevice.register_slave`

Type: [PVBusSlave](#).

`motherboard.virtioblockdevice.virtio_master`

Type: [PVBusMaster](#).

`motherboard.virtiop9device`

virtio P9 server.

Type: [VirtioP9Device](#).

`motherboard.virtiop9device.mmio_slave`

Type: [PVBusSlave](#).

motherboard.virtio9device.virtio_master

Type: [PVBusMaster](#).

motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.vram.bus_slave

Type: [PVBusSlave](#).

14.2 FVP_VE_Cortex-A15x1-A7x1

List of instances in FVP_VE_Cortex-A15x1-A7x1.

FVP_VE_Cortex-A15x1-A7x1 instances

coretile

Dual cluster ARM Cortex-A15x1 and ARM Cortex-A7x1 Core Tile.

Type: [ARM_Cortex_A15x1_A7x1_CT](#).

coretile.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

coretile.cci400.cciinterconnect

Type: [PVCache](#).

coretile.cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

coretile.cci400.cciregisters.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

coretile.cci400.cciregisters.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

coretile.cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

coretile.cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

coretile.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

coretile.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

coretile.cluster0

ARM Cortex-A15 Cluster CT model.

Type: [Cluster_ARM_Cortex-A15](#).

coretile.cluster0.acp_mapper

Type: [PVBusMapper](#).

coretile.cluster0.cpu0

ARM Cortex-A15 CT model.

coretile.cluster1.l2_cache.upstream[6]

Type: [PVBusSlave](#).

coretile.cluster1.l2_cache.upstream[7]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_cache.upstream[8]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_cache.upstream[9]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_flusher

Type: [AsyncCacheFlushUnit](#).

coretile.dualclustersystemconfigurationblock

Dual Cluster System Configuration Block.

Type: [DualClusterSystemConfigurationBlock](#).

coretile.dualclustersystemconfigurationblock.pvbusslave

Type: [PVBUSSlave](#).

coretile.globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

coretile.globalcounter.pvbus_control_s[0]

Type: [PVBUSSlave](#).

coretile.globalcounter.pvbus_read_s[0]

Type: [PVBUSSlave](#).

coretile.v7_vgic

System VGIC architecture version v7.

Type: [v7_VGIC](#).

coretile.v7_vgic.vgic_bus_slave

Type: [PVBUSSlave](#).

daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.coresight_mapper

Type: [PVBusMapper](#).

daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc.bus_slave

Type: [PVBusSlave](#).

daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc_phy.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_aliased.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_4.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_8.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: `PL370_HDLCDC`.

daughterboard.hdlcd.busmaster

Type: `PVBusMaster`.

daughterboard.hdlcd.busslave

Type: `PVBusSlave`.

daughterboard.hdlcd.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

daughterboard.hdlcd.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

daughterboard.hdlcd.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

daughterboard.hdlcd.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: `VEInterruptMapper`.

daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: `TZSwitch`.

daughterboard.nonsecure_region.pvbus_mapper

Type: `PVBusMapper`.

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

daughterboard.secureDRAM.bus_slave

Type: `PVBusSlave`.

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmbs

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_0_1.busslave

Type: [PVBusSlave](#).

motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_2_3.busslave

Type: [PVBusSlave](#).

motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

`motherboard.audioout`

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

`motherboard.clock100Hz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock24MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock35MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock50Hz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clockCLCD`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.dummy_local_dap_rom`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_local_dap_rom.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.dummy_ram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_ram.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.dummy_usb`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_usb.bus_slave`

Type: [PVBusSlave](#).

`motherboard.flash0`

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

`motherboard.flash0.map`

Type: [PVBusMapper](#).

`motherboard.flash0.mbs`

Type: [PVBusSlave](#).

`motherboard.flash0.rmbs`

Type: [PVBusSlave](#).

`motherboard.flash1`

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

`motherboard.flash1.map`

Type: [PVBusMapper](#).

`motherboard.flash1.mbs`

Type: [PVBusSlave](#).

`motherboard.flash1.rmbs`

Type: [PVBusSlave](#).

`motherboard.flashloader0`

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

`motherboard.flashloader1`

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

`motherboard.hostbridge`

Host Socket Interface Component.

Type: [HostBridge](#).

`motherboard.mmc`

Generic Multimedia Card.

Type: [MMC](#).

`motherboard.mmc.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.mmc.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.mmc.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.mmc.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart0`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart0.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl011_uart0.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart0.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart0.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke

wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart1.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart2.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart3.busslave

Type: [PVBusSlave](#).

motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

motherboard.pl031_rtc.busslave

Type: [PVBusSlave](#).

motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl031_rtc.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl031_rtc.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl031_rtc.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl041_aaci`

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

`motherboard.pl041_aaci.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl041_aaci.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl041_aaci.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl041_aaci.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl041_aaci.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl050_kmi0`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

`motherboard.pl050_kmi0.busslave`

Type: [PVBusSlave](#).

`motherboard.pl050_kmi0.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl050_kmi1`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

`motherboard.pl050_kmi1.busslave`

Type: [PVBusSlave](#).

`motherboard.pl050_kmi1.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl111_clcd`

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

`motherboard.pl111_clcd.pl11x_clcd`

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

`motherboard.pl111_clcd.pl11x_clcd.busmaster`

Type: [PVBusMaster](#).

`motherboard.pl111_clcd.pl11x_clcd.busslave`

Type: [PVBusSlave](#).

`motherboard.pl111_clcd.pl11x_clcd.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

motherboard.pl180_mci.busslave

Type: [PVBUSSlave](#).

motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.ps2mouse`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

`motherboard.ps2mouse.ps2_clocktimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.psram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.psram.bus_slave

Type: [PVBUSSlave](#).

motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

motherboard.smsc_91c111.SMSC_slave

Type: [PVBUSSlave](#).

motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

motherboard.sp805_wdog.busslave

Type: [PVBUSSlave](#).

motherboard.sp805_wdog.clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

motherboard.sp805_wdog.clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

motherboard.sp805_wdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.sp805_wdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

motherboard.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.ve_sysregs

Type: [vE_SysRegs](#).

motherboard.ve_sysregs.busslave

Type: [PVBusSlave](#).

motherboard.virtioblockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

motherboard.virtioblockdevice.register_slave

Type: [PVBusSlave](#).

motherboard.virtioblockdevice.virtio_master

Type: [PVBusMaster](#).

motherboard.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

motherboard.virtiop9device.mmio_slave

Type: [PVBusSlave](#).

motherboard.virtiop9device.virtio_master

Type: [PVBusMaster](#).

motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.vram.bus_slave

Type: [PVBusSlave](#).

14.3 FVP_VE_Cortex-A15x2

List of instances in FVP_VE_Cortex-A15x2.

FVP_VE_Cortex-A15x2 instances

cluster

ARM Cortex-A15 Cluster CT model.

Type: [Cluster_ARM_Cortex-A15](#).

Type: [AsyncCacheFlushUnit](#).

daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.coresight_mapper

Type: [PVBusMapper](#).

daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc.bus_slave

Type: [PVBusSlave](#).

daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc_phy.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_aliased.pvbus_mapperType: [PVBusMapper](#).**daughterboard.dram_limit_4**

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).**daughterboard.dram_limit_4.pvbus_mapper**Type: [PVBusMapper](#).**daughterboard.dram_limit_8**

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).**daughterboard.dram_limit_8.pvbus_mapper**Type: [PVBusMapper](#).**daughterboard.exclusive_monitor**

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).**daughterboard.exclusive_monitor.bus_mapper**Type: [PVBusMapper](#).**daughterboard.hdlcd**

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).**daughterboard.hdlcd.busmaster**Type: [PVBusMaster](#).**daughterboard.hdlcd.busslave**Type: [PVBusSlave](#).**daughterboard.hdlcd.timer**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).**daughterboard.hdlcd.timer.timer**

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.nonsecure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureDRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmbs

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

globalcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

globalcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_0_1.busslave

Type: [PVBusSlave](#).

motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_2_3.busslave

Type: [PVBUSSlave](#).

motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock35MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock50Hz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clockCLCD`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.dummy_local_dap_rom`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_local_dap_rom.bus_slave`

Type: [PVBusSlave](#).

`motherboard.dummy_ram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_ram.bus_slave`

Type: [PVBusSlave](#).

`motherboard.dummy_usb`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_usb.bus_slave`

Type: [PVBusSlave](#).

`motherboard.flash0`

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

`motherboard.flash0.map`

Type: [PVBusMapper](#).

`motherboard.flash0.mbs`

Type: [PVBusSlave](#).

motherboard.flash0.rmbs

Type: [PVBUSSlave](#).

motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash1.map

Type: [PVBUSMapper](#).

motherboard.flash1.mbs

Type: [PVBUSSlave](#).

motherboard.flash1.rmbs

Type: [PVBUSSlave](#).

motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

motherboard.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

motherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

motherboard.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.mmc.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart0`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart0.busslave`

Type: [PVBusSlave](#).

`motherboard.pl011_uart0.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart0.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart0.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart0.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart0.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart1`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart1.busslave

Type: [PVBusSlave](#).

motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart2.busslave

Type: [PVBusSlave](#).

motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart2.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

`motherboard.pl011_uart2.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`motherboard.pl011_uart2.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`motherboard.pl011_uart2.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`motherboard.pl011_uart3`

ARM PrimeCell UART(PL011).

Type: `PL011_Uart`.

`motherboard.pl011_uart3.busslave`

Type: `PVBusSlave`.

`motherboard.pl011_uart3.clk_divider`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`motherboard.pl011_uart3.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

motherboard.pl031_rtc.busslave

Type: [PVBUSSlave](#).

motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl041_aaci`

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

`motherboard.pl041_aaci.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl041_aaci.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

`motherboard.pl041_aaci.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

`motherboard.pl041_aaci.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl041_aaci.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl050_kmi0`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

`motherboard.pl050_kmi0.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl050_kmi0.clk_divider`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi1.busslave

Type: [PVBusSlave](#).

motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

motherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl180_mci`

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

`motherboard.pl180_mci.busslave`

Type: [PVBusSlave](#).

`motherboard.ps2keyboard`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

`motherboard.ps2keyboard.ps2_clocktimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.ps2mouse`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.psram.bus_slave

Type: [PVBusSlave](#).

motherboard.smisc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

motherboard.smisc_91c111.SMISC_slave

Type: [PVBusSlave](#).

motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

motherboard.sp805_wdog.busslave

Type: [PVBusSlave](#).

motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.sp805_wdog.clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.sp805_wdog.clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.sp805_wdog.clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.sp810_sysctrl`

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

`motherboard.sp810_sysctrl.busslave`

Type: [PVBUSSlave](#).

`motherboard.sp810_sysctrl.clkdiv_clk0`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk2`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk3`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.terminal_0`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_1`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_2`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_3`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.ve_sysregs`

Type: [VE_SysRegs](#).

`motherboard.ve_sysregs.busslave`

Type: [PVBusSlave](#).

`motherboard.virtio_blockdevice`

virtio block device.

Type: [VirtioBlockDevice](#).

`motherboard.virtio_blockdevice.register_slave`

Type: [PVBusSlave](#).

`motherboard.virtio_blockdevice.virtio_master`

Type: [PVBusMaster](#).

`motherboard.virtio_p9device`

virtio P9 server.

Type: [VirtioP9Device](#).

`motherboard.virtio_p9device.mmio_slave`

Type: [PVBusSlave](#).

`motherboard.virtio_p9device.virtio_master`

Type: [PVBusMaster](#).

motherboard.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

motherboard.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

motherboard.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

motherboard.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

motherboard.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

motherboard.vis.recorder.playbackTimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

motherboard.vis.recorder.recordingDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.vram.bus_slave

Type: [PVBusSlave](#).

14.4 FVP_VE_Cortex-A15x2-A7x2

List of instances in FVP_VE_Cortex-A15x2-A7x2.

FVP_VE_Cortex-A15x2-A7x2 instances

coretile

Dual cluster ARM Cortex-A15x2 and ARM Cortex-A7x2 Core Tile.

Type: [ARM_Cortex_A15x2_A7x2_CT](#).

coretile.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

coretile.cci400.cciinterconnect

Type: [PVCache](#).

coretile.cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

coretile.cci400.cciregisters.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

coretile.cci400.cciregisters.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

coretile.cci400.cciregisters.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

coretile.cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

coretile.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

coretile.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

coretile.cluster0

ARM Cortex-A15 Cluster CT model.

Type: [Cluster_ARM_Cortex-A15](#).

coretile.cluster0.acp_mapper

Type: [PVBusMapper](#).

coretile.cluster0.cpu0

ARM Cortex-A15 CT model.

Type: [ARM_Cortex-A15](#).

coretile.cluster0.cpu0.DTLB

Type: [TLB](#).

coretile.cluster0.cpu0.ITLB

Type: [TLB](#).

coretile.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

coretile.cluster0.cpu0.itlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

coretile.cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

coretile.cluster0.cpu0.l1dcache.upstream[0]

Type: [PVBusSlave](#).

coretile.cluster0.cpu0.l1icache

PV Cache.

Type: `PVCache`.

coretile.cluster0.cpu0.l1icache.upstream[0]

Type: `PVBusSlave`.

coretile.cluster0.cpu1

ARM Cortex-A15 CT model.

Type: `ARM_Cortex-A15`.

coretile.cluster0.cpu1.DTLB

Type: `TLB`.

coretile.cluster0.cpu1.ITLB

Type: `TLB`.

coretile.cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

coretile.cluster0.cpu1.itlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

coretile.cluster0.cpu1.l1dcache

PV Cache.

Type: `PVCache`.

coretile.cluster0.cpu1.l1dcache.upstream[0]

Type: `PVBusSlave`.

coretile.cluster0.cpu1.l1icache

PV Cache.

Type: `PVCache`.

coretile.cluster0.cpu1.l1icache.upstream[0]

Type: `PVBusSlave`.

coretile.cluster0.ext_bus

Type: `PVBusLogger`.

coretile.cluster0.ext_bus.mapper

Type: `PVBusMapper`.

coretile.cluster0.l2_cache

PV Cache.

Type: `PVCache`.

coretile.cluster0.l2_cache.upstream[0]

Type: `PVBusSlave`.

coretile.cluster0.l2_cache.upstream[10]

Type: `PVBusSlave`.

coretile.cluster0.l2_cache.upstream[11]

coretile.cluster0.l2_cache.upstream[8]

Type: [PVBUSSlave](#).

coretile.cluster0.l2_cache.upstream[9]

Type: [PVBUSSlave](#).

coretile.cluster0.l2_flusher

Type: [AsyncCacheFlushUnit](#).

coretile.cluster1

ARM Cortex-A7 Cluster CT model.

Type: [Cluster_ARM_Cortex-A7](#).

coretile.cluster1.acp_mapper

Type: [PVBUSMapper](#).

coretile.cluster1.cpu0

ARM Cortex-A7 CT model.

Type: [ARM_Cortex-A7](#).

coretile.cluster1.cpu0.DTLB

Type: TLB.

coretile.cluster1.cpu0.ITLB

Type: TLB.

coretile.cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

coretile.cluster1.cpu0.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

coretile.cluster1.cpu0.l1dcache

PV Cache.

Type: PVCache.

coretile.cluster1.cpu0.l1dcache.upstream[0]

Type: PVBusSlave.

coretile.cluster1.cpu0.l1icache

PV Cache.

Type: PVCache.

coretile.cluster1.cpu0.l1icache.upstream[0]

Type: PVBusSlave.

coretile.cluster1.cpu1

ARM Cortex-A7 CT model.

Type: ARM_Cortex-A7.

coretile.cluster1.cpu1.DTLB

Type: TLB.

coretile.cluster1.cpu1.ITLB

Type: TLB.

coretile.cluster1.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

coretile.cluster1.cpu1.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

coretile.cluster1.cpu1.l1dcache

PV Cache.

Type: PVCache.

coretile.cluster1.cpu1.l1dcache.upstream[0]

Type: PVBusSlave.

coretile.cluster1.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

coretile.cluster1.cpu1.l1icache.upstream[0]

Type: [PVBusSlave](#).

coretile.cluster1.ext_bus

Type: [PVBusLogger](#).

coretile.cluster1.l2_cache.upstream[9]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_flusher

Type: [AsyncCacheFlushUnit](#).

coretile.dualclustersystemconfigurationblock

Dual Cluster System Configuration Block.

Type: [DualClusterSystemConfigurationBlock](#).

coretile.dualclustersystemconfigurationblock.pvbusslave

Type: [PVBUSSlave](#).

coretile.globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

coretile.globalcounter.pvbus_control_s[0]

Type: [PVBUSSlave](#).

coretile.globalcounter.pvbus_read_s[0]

Type: [PVBUSSlave](#).

coretile.v7_vgic

System VGIC architecture version v7.

Type: [v7_VGIC](#).

coretile.v7_vgic.vgic_bus_slave

Type: [PVBUSSlave](#).

daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

daughterboard.clockCLCD

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.clockdivider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.coresight_mapper

Type: [PVBusMapper](#).

daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc.bus_slave

Type: [PVBusSlave](#).

daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc_phy.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_aliased.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_4.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_8.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

daughterboard.hdlcd.busmaster

Type: [PVBusMaster](#).

daughterboard.hdlcd.busslave

Type: [PVBusSlave](#).

daughterboard.hdlcd.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

daughterboard.hdlcd.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

daughterboard.hdlcd.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.hdlcd.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

daughterboard.nonsecure_region

Allow [TrustZone](#) secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.nonsecure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureDRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmbs

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_0_1.busslave

Type: [PVBUSSlave](#).

motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_2_3.busslave

Type: [PVBUSSlave](#).

motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_ram.bus_slave

Type: [PVBusSlave](#).

motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_usb.bus_slave

Type: [PVBusSlave](#).

motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash0.map

Type: [PVBusMapper](#).

motherboard.flash0.mbs

Type: [PVBusSlave](#).

motherboard.flash0.rmbs

Type: [PVBusSlave](#).

motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash1.map

Type: [PVBusMapper](#).

motherboard.flash1.mbs

Type: [PVBusSlave](#).

motherboard.flash1.rmbs

Type: [PVBusSlave](#).

motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

motherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart0.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart0.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`motherboard.pl011_uart0.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`motherboard.pl011_uart0.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`motherboard.pl011_uart1`

ARM PrimeCell UART(PL011).

Type: `PL011_Uart`.

`motherboard.pl011_uart1.busslave`

Type: `PVBusSlave`.

`motherboard.pl011_uart1.clk_divider`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`motherboard.pl011_uart1.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

`motherboard.pl011_uart1.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`motherboard.pl011_uart1.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart1.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart2`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart2.busslave`

Type: [PVBusSlave](#).

`motherboard.pl011_uart2.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart2.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart2.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart2.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart2.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart3.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

motherboard.pl031_rtc.busslave

Type: [PVBUSSlave](#).

motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

motherboard.pl041_aaci.busslave

Type: [PVBUSSlave](#).

motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi0.busslave

Type: [PVBusSlave](#).

motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi1.busslave

Type: [PVBusSlave](#).

motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

motherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

motherboard.pl180_mci.busslave

Type: [PVBUSSlave](#).

motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.ps2mouse`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked `PS2Data` signals which can be routed to a `PL050_KMI` component.

Type: [PS2Mouse](#).

`motherboard.ps2mouse.ps2_clocktimer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.psram.bus_slave

Type: [PVBusSlave](#).

motherboard.smisc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

motherboard.smisc_91c111.SMISC_slave

Type: [PVBusSlave](#).

motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

motherboard.sp805_wdog.busslave

Type: [PVBusSlave](#).

motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

`motherboard.sp810_sysctrl.busslave`

Type: `PVBusSlave`.

`motherboard.sp810_sysctrl.clkdiv_clk0`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`motherboard.sp810_sysctrl.clkdiv_clk1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`motherboard.sp810_sysctrl.clkdiv_clk2`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`motherboard.sp810_sysctrl.clkdiv_clk3`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`motherboard.terminal_0`

Telnet terminal interface.

Type: `TelnetTerminal`.

`motherboard.terminal_1`

Telnet terminal interface.

Type: `TelnetTerminal`.

`motherboard.terminal_2`

Telnet terminal interface.

Type: `TelnetTerminal`.

`motherboard.terminal_3`

Telnet terminal interface.

Type: `TelnetTerminal`.

`motherboard.ve_sysregs`

Type: `VE_SysRegs`.

motherboard.ve_sysregs.busslave

Type: [PVBusSlave](#).

motherboard.virtio_blockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

motherboard.virtio_blockdevice.register_slave

Type: [PVBusSlave](#).

motherboard.virtio_blockdevice.virtio_master

Type: [PVBusMaster](#).

motherboard.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

motherboard.virtio_p9device.mmio_slave

Type: [PVBusSlave](#).

motherboard.virtio_p9device.virtio_master

Type: [PVBusMaster](#).

motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

motherboard.vis.recorder.playbackDivider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vis.recorder.playbackTimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

motherboard.vis.recorder.playbackTimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke

wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.vis.recorder.playbackTimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.vis.recorder.playbackTimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.vis.recorder.recordingDivider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.vram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.vram.bus_slave`

Type: [PVBusSlave](#).

14.5 FVP_VE_Cortex-A15x4

List of instances in FVP_VE_Cortex-A15x4.

FVP_VE_Cortex-A15x4 instances

`cluster`

ARM Cortex-A15 Cluster CT model.

Type: [cluster_ARM_Cortex-A15](#).

Type: [AsyncCacheFlushUnit](#).

daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.coresight_mapper

Type: [PVBusMapper](#).

daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc.bus_slave

Type: [PVBusSlave](#).

daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

daughterboard.dmc_phy.bus_slave

Type: `PVBusSlave`.

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

daughterboard.dram.bus_slave

Type: `PVBusSlave`.

daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: `TZSwitch`.

daughterboard.dram_aliased.pvbus_mapper

Type: `PVBusMapper`.

daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: `TZSwitch`.

daughterboard.dram_limit_4.pvbus_mapper

Type: `PVBusMapper`.

daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: `TZSwitch`.

daughterboard.dram_limit_8.pvbus_mapper

Type: `PVBusMapper`.

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

daughterboard.exclusive_monitor.bus_mapper

Type: `PVBusMapper`.

daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: `PL370_HDLCD`.

daughterboard.hdlcd.busmaster

Type: `PVBusMaster`.

daughterboard.hdlcd.busslave

Type: `PVBusSlave`.

daughterboard.hdlcd.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.nonsecure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureDRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmbs

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

globalcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

globalcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_0_1.busslave

Type: [PVBusSlave](#).

motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_0_1.clk_div1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_0_1.counter0`

Internal component used by SP804 Timer module.

Type: CounterModule.

`motherboard.Timer_0_1.counter1`

Internal component used by SP804 Timer module.

Type: CounterModule.

`motherboard.Timer_2_3`

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

`motherboard.Timer_2_3.busslave`

Type: [PVBusSlave](#).

`motherboard.Timer_2_3.clk_div0`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_2_3.clk_div1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_2_3.counter0`

Internal component used by SP804 Timer module.

Type: CounterModule.

`motherboard.Timer_2_3.counter1`

Internal component used by SP804 Timer module.

Type: CounterModule.

`motherboard.audioout`

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_local_dap_rom.bus_slave

Type: [PVBUSSlave](#).

motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_ram.bus_slave

Type: [PVBUSSlave](#).

motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_usb.bus_slave

Type: [PVBusSlave](#).

motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash0.map

Type: [PVBusMapper](#).

motherboard.flash0.mbs

Type: [PVBusSlave](#).

motherboard.flash0.rmbs

Type: [PVBusSlave](#).

motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash1.map

Type: [PVBusMapper](#).

motherboard.flash1.mbs

Type: [PVBusSlave](#).

motherboard.flash1.rmbs

Type: [PVBusSlave](#).

motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

motherboard.mmc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

motherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

motherboard.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart0.busslave

Type: [PVBusSlave](#).

motherboard.pl011_uart0.clk_divider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

motherboard.pl011_uart0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart0.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart0.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart1`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart1.busslave`

Type: [PVBUSlave](#).

`motherboard.pl011_uart1.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart1.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart1.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart1.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart1.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart2.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart3.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart3.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart3.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart3.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart3.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl031_rtc`

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

`motherboard.pl031_rtc.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl031_rtc.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

motherboard.pl041_aaci.busslave

Type: [PVBUSSlave](#).

motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

motherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [`ClockTimerThread64`](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [`SchedulerThread`](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [`SchedulerThreadEvent`](#).

`motherboard.pl180_mci`

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [`PL180_MCI`](#).

`motherboard.pl180_mci.busslave`

Type: [`PVBusSlave`](#).

`motherboard.ps2keyboard`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked `PS2Data` signals which can be routed to a `PL050_KMI` component.

Type: [`PS2Keyboard`](#).

`motherboard.ps2keyboard.ps2_clocktimer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [`ClockTimerThread`](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [`ClockTimerThread64`](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.ps2mouse`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

`motherboard.ps2mouse.ps2_clocktimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.psram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.psram.bus_slave`

Type: [PVBusSlave](#).

`motherboard.smisc_91c111`

SMSC 91C111 ethernet controller.

Type: `SMSC_91C111`.

`motherboard.smc_91c111.SMSC_slave`

Type: `PVBusSlave`.

`motherboard.sp805_wdog`

ARM Watchdog Module(SP805).

Type: `SP805_Watchdog`.

`motherboard.sp805_wdog.busslave`

Type: `PVBusSlave`.

`motherboard.sp805_wdog.clocktimer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

`motherboard.sp805_wdog.clocktimer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`motherboard.sp805_wdog.clocktimer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`motherboard.sp805_wdog.clocktimer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`motherboard.sp810_sysctrl`

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

`motherboard.sp810_sysctrl.busslave`

Type: `PVBusSlave`.

`motherboard.sp810_sysctrl.clkdiv_clk0`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk2`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk3`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.terminal_0`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_1`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_2`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_3`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.ve_sysregs`

Type: [VE_SysRegs](#).

`motherboard.ve_sysregs.busslave`

Type: [PVBusSlave](#).

`motherboard.virtioblockdevice`

virtio block device.

Type: [VirtioBlockDevice](#).

`motherboard.virtioblockdevice.register_slave`

Type: [PVBusSlave](#).

`motherboard.virtioblockdevice.virtio_master`

Type: [PVBusMaster](#).

`motherboard.virtiop9device`

virtio P9 server.

Type: [VirtioP9Device](#).

`motherboard.virtiop9device.mmio_slave`

Type: [PVBusSlave](#).

`motherboard.virtiop9device.virtio_master`

Type: [PVBusMaster](#).

`motherboard.vis`

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

`motherboard.vis.recorder`

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

`motherboard.vis.recorder.playbackDivider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.vis.recorder.playbackTimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.vis.recorder.playbackTimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.vis.recorder.playbackTimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.vram.bus_slave

Type: [PVBUSSlave](#).

14.6 FVP_VE_Cortex-A15x4-A7x4

List of instances in FVP_VE_Cortex-A15x4-A7x4.

FVP_VE_Cortex-A15x4-A7x4 instances

coretile

Dual cluster ARM Cortex-A15x4 and ARM Cortex-A7x4 Core Tile.

Type: [ARM_Cortex_A15x4_A7x4_CT](#).

coretile.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

coretile.cci400.cciinterconnect

Type: [PVCACHE](#).

coretile.cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

coretile.cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

coretile.cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

coretile.cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

coretile.cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

coretile.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

coretile.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

coretile.cluster0

ARM Cortex-A15 Cluster CT model.

Type: [Cluster_ARM_Cortex-A15](#).

coretile.cluster0.acp_mapper

Type: [PVBusMapper](#).

coretile.cluster0.cpu0

ARM Cortex-A15 CT model.

Type: [ARM_Cortex-A15](#).

coretile.cluster0.cpu0.DTLB

Type: TLB.

coretile.cluster0.cpu0.ITLB

Type: TLB.

coretile.cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

coretile.cluster0.cpu0.itlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).**coretile.cluster0.cpu0.l1dcache**

PV Cache.

Type: [PvCache](#).**coretile.cluster0.cpu0.l1dcache.upstream[0]**Type: [PvBusSlave](#).**coretile.cluster0.cpu0.l1icache**

PV Cache.

Type: [PvCache](#).**coretile.cluster0.cpu0.l1icache.upstream[0]**Type: [PvBusSlave](#).**coretile.cluster0.cpu1**

ARM Cortex-A15 CT model.

Type: [ARM_Cortex-A15](#).**coretile.cluster0.cpu1.DTLB**Type: [TLB](#).**coretile.cluster0.cpu1.ITLB**Type: [TLB](#).**coretile.cluster0.cpu1.dtlb**

TLB - instruction, data or unified.

Type: [TlbCadi](#).**coretile.cluster0.cpu1.itlb**

TLB - instruction, data or unified.

Type: [TlbCadi](#).**coretile.cluster0.cpu1.l1dcache**

PV Cache.

Type: [PvCache](#).**coretile.cluster0.cpu1.l1dcache.upstream[0]**Type: [PvBusSlave](#).**coretile.cluster0.cpu1.l1icache**

PV Cache.

Type: [PvCache](#).**coretile.cluster0.cpu1.l1icache.upstream[0]**Type: [PvBusSlave](#).**coretile.cluster0.cpu2**

ARM Cortex-A15 CT model.

Type: [ARM_Cortex-A15](#).

coretile.cluster0.cpu2.DTLB

Type: TLB.

coretile.cluster0.cpu2.ITLB

Type: TLB.

coretile.cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

coretile.cluster0.cpu2.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

coretile.cluster0.cpu2.l1dcache

PV Cache.

Type: PVCache.

coretile.cluster0.cpu2.l1dcache.upstream[0]

Type: PVBusSlave.

coretile.cluster0.cpu2.l1icache

PV Cache.

Type: PVCache.

coretile.cluster0.cpu2.l1icache.upstream[0]

Type: PVBusSlave.

coretile.cluster0.cpu3

ARM Cortex-A15 CT model.

Type: ARM_Cortex-A15.

coretile.cluster0.cpu3.DTLB

Type: TLB.

coretile.cluster0.cpu3.ITLB

Type: TLB.

coretile.cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

coretile.cluster0.cpu3.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

coretile.cluster0.cpu3.l1dcache

PV Cache.

Type: PVCache.

coretile.cluster0.cpu3.l1dcache.upstream[0]

Type: PVBusSlave.

coretile.cluster0.cpu3.l1icache

PV Cache.

Type: `PVCache`.

coretile.cluster0.cpu3.l1icache.upstream[0]

Type: `PVBusSlave`.

coretile.cluster0.ext_bus

Type: `PVBusLogger`.

coretile.cluster0.ext_bus.mapper

Type: `PVBusMapper`.

coretile.cluster0.l2_cache

PV Cache.

Type: `PVCache`.

coretile.cluster0.l2_cache.upstream[0]

Type: `PVBusSlave`.

coretile.cluster0.l2_cache.upstream[10]

Type: `PVBusSlave`.

coretile.cluster0.l2_cache.upstream[11]

Type: `PVBusSlave`.

coretile.cluster0.l2_cache.upstream[12]

Type: `PVBusSlave`.

coretile.cluster0.l2_cache.upstream[13]

Type: `PVBusSlave`.

coretile.cluster0.l2_cache.upstream[14]

Type: `PVBusSlave`.

coretile.cluster0.l2_cache.upstream[15]

Type: `PVBusSlave`.

coretile.cluster0.l2_cache.upstream[16]

Type: `PVBusSlave`.

coretile.cluster0.l2_cache.upstream[1]

Type: `PVBusSlave`.

coretile.cluster0.l2_cache.upstream[2]

Type: `PVBusSlave`.

coretile.cluster0.l2_cache.upstream[3]

Type: `PVBusSlave`.

coretile.cluster0.l2_cache.upstream[4]

Type: `PVBusSlave`.

coretile.cluster0.l2_cache.upstream[5]

Type: `PVBusSlave`.

coretile.cluster0.l2_cache.upstream[6]
Type: [PVBUSSlave](#).

coretile.cluster0.l2_cache.upstream[7]
Type: [PVBUSSlave](#).

coretile.cluster0.l2_cache.upstream[8]
Type: [PVBUSSlave](#).

coretile.cluster0.l2_cache.upstream[9]
Type: [PVBUSSlave](#).

coretile.cluster0.l2_flusher
Type: AsyncCacheFlushUnit.

coretile.cluster1
ARM Cortex-A7 Cluster CT model.
Type: cluster_ARM_Cortex-A7.

coretile.cluster1.acp_mapper
Type: [PVBUSMapper](#).

coretile.cluster1.cpu0
ARM Cortex-A7 CT model.
Type: [ARM_Cortex-A7](#).

coretile.cluster1.cpu0.DTLB
Type: TLB.

coretile.cluster1.cpu0.ITLB
Type: TLB.

coretile.cluster1.cpu0.dtlb
TLB - instruction, data or unified.
Type: Tlbcadi.

coretile.cluster1.cpu0.itlb
TLB - instruction, data or unified.
Type: Tlbcadi.

coretile.cluster1.cpu0.l1dcache
PV Cache.
Type: pVCache.

coretile.cluster1.cpu0.l1dcache.upstream[0]
Type: [PVBUSSlave](#).

coretile.cluster1.cpu0.l1icache
PV Cache.
Type: pVCache.

coretile.cluster1.cpu0.l1icache.upstream[0]
Type: [PVBUSSlave](#).

coretile.cluster1.cpu1

ARM Cortex-A7 CT model.

Type: [ARM_Cortex-A7](#).**coretile.cluster1.cpu1.DTLB**

Type: TLB.

coretile.cluster1.cpu1.ITLB

Type: TLB.

coretile.cluster1.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

coretile.cluster1.cpu1.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

coretile.cluster1.cpu1.l1dcache

PV Cache.

Type: pVCache.

coretile.cluster1.cpu1.l1dcache.upstream[0]Type: [PVBusSlave](#).**coretile.cluster1.cpu1.l1icache**

PV Cache.

Type: pVCache.

coretile.cluster1.cpu1.l1icache.upstream[0]Type: [PVBusSlave](#).**coretile.cluster1.cpu2**

ARM Cortex-A7 CT model.

Type: [ARM_Cortex-A7](#).**coretile.cluster1.cpu2.DTLB**

Type: TLB.

coretile.cluster1.cpu2.ITLB

Type: TLB.

coretile.cluster1.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

coretile.cluster1.cpu2.itlb

TLB - instruction, data or unified.

Type: TlbCadi.

coretile.cluster1.cpu2.l1dcache

PV Cache.

Type: pVCache.

coretile.cluster1.cpu2.l1dcache.upstream[0]

Type: [PVBusSlave](#).

coretile.cluster1.cpu2.l1icache

PV Cache.

Type: [PVCache](#).

coretile.cluster1.cpu2.l1icache.upstream[0]

Type: [PVBusSlave](#).

coretile.cluster1.cpu3

ARM Cortex-A7 CT model.

Type: [ARM_Cortex-A7](#).

coretile.cluster1.cpu3.DTLB

Type: [TLB](#).

coretile.cluster1.cpu3.ITLB

Type: [TLB](#).

coretile.cluster1.cpu3.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

coretile.cluster1.cpu3.itlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

coretile.cluster1.cpu3.l1dcache

PV Cache.

Type: [PVCache](#).

coretile.cluster1.cpu3.l1dcache.upstream[0]

Type: [PVBusSlave](#).

coretile.cluster1.cpu3.l1icache

PV Cache.

Type: [PVCache](#).

coretile.cluster1.cpu3.l1icache.upstream[0]

Type: [PVBusSlave](#).

coretile.cluster1.ext_bus

Type: [PVBusLogger](#).

coretile.cluster1.ext_bus.mapper

Type: [PVBusMapper](#).

coretile.cluster1.l2_cache

PV Cache.

Type: [PVCache](#).

coretile.cluster1.l2_cache.upstream[0]

Type: [PVBusSlave](#).

coretile.cluster1.l2_cache.upstream[10]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_cache.upstream[11]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_cache.upstream[12]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_cache.upstream[13]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_cache.upstream[14]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_cache.upstream[15]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_cache.upstream[16]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_cache.upstream[1]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_cache.upstream[2]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_cache.upstream[3]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_cache.upstream[4]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_cache.upstream[5]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_cache.upstream[6]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_cache.upstream[7]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_cache.upstream[8]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_cache.upstream[9]

Type: [PVBUSSlave](#).

coretile.cluster1.l2_flusher

Type: [AsyncCacheFlushUnit](#).

coretile.dualclustersystemconfigurationblock

Dual Cluster System Configuration Block.

Type: [DualClusterSystemConfigurationBlock](#).

coretile.dualclustersystemconfigurationblock.pvbuslave

Type: [PVBusSlave](#).

coretile.globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

coretile.globalcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

coretile.globalcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

coretile.v7_vgic

System VGIC architecture version v7.

Type: [v7_VGIC](#).

coretile.v7_vgic.vgic_bus_slave

Type: [PVBusSlave](#).

daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.coresight_mapper

Type: [PVBusMapper](#).

daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc.bus_slave

Type: [PVBusSlave](#).

daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc_phy.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_aliased.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_4.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_8.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

daughterboard.hdlcd.busmaster

Type: [PVBusMaster](#).

daughterboard.hdlcd.busslave

Type: [PVBusSlave](#).

daughterboard.hdlcd.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.nonsecure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureDRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmbs

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_0_1.busslave

Type: [PVBusSlave](#).

motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_2_3.busslave

Type: [PVBUSSlave](#).

motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock35MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock50Hz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clockCLCD`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.dummy_local_dap_rom`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_local_dap_rom.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.dummy_ram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_ram.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.dummy_usb`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_usb.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.flash0`

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

`motherboard.flash0.map`

Type: [PVBUSMapper](#).

motherboard.flash0.mbs

Type: [PVBUSSlave](#).

motherboard.flash0.rmbs

Type: [PVBUSSlave](#).

motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash1.map

Type: [PVBUSMapper](#).

motherboard.flash1.mbs

Type: [PVBUSSlave](#).

motherboard.flash1.rmbs

Type: [PVBUSSlave](#).

motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

motherboard.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

motherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

`motherboard.mmc.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.mmc.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart0`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart0.busslave`

Type: [PVBusSlave](#).

`motherboard.pl011_uart0.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart0.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart0.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart0.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart0.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart1.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart2.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart2.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart2.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart2.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart2.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart3`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart3.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl011_uart3.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart3.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

motherboard.pl031_rtc.busslave

Type: [PVBUSSlave](#).

motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl031_rtc.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl041_aaci`

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

`motherboard.pl041_aaci.busslave`

Type: [PVBusSlave](#).

`motherboard.pl041_aaci.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl041_aaci.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl041_aaci.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl041_aaci.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl050_kmi0`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

`motherboard.pl050_kmi0.busslave`

Type: [PVBusSlave](#).

`motherboard.pl050_kmi0.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

motherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl180_mci`

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

`motherboard.pl180_mci.busslave`

Type: [PVBusSlave](#).

`motherboard.ps2keyboard`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

`motherboard.ps2keyboard.ps2_clocktimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.ps2mouse`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

`motherboard.ps2mouse.ps2_clocktimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.psram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.psram.bus_slave`

Type: [PVBusSlave](#).

`motherboard.smisc_91c111`

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

`motherboard.smisc_91c111.SMISC_slave`

Type: [PVBusSlave](#).

`motherboard.sp805_wdog`

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

motherboard.sp805_wdog.busslave

Type: [PVBUSSlave](#).

motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

motherboard.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk2`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk3`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.terminal_0`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_1`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_2`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_3`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.ve_sysregs`

Type: [VE_SysRegs](#).

`motherboard.ve_sysregs.busslave`

Type: [PVBusSlave](#).

`motherboard.virtioblockdevice`

virtio block device.

Type: [VirtioBlockDevice](#).

`motherboard.virtioblockdevice.register_slave`

Type: [PVBusSlave](#).

`motherboard.virtioblockdevice.virtio_master`

Type: [PVBusMaster](#).

`motherboard.virtiop9device`

virtio P9 server.

Type: [VirtioP9Device](#).

`motherboard.virtiop9device.mmio_slave`

Type: [PVBusSlave](#).

motherboard.virtio9device.virtio_master

Type: [PVBusMaster](#).

motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.vram.bus_slave

Type: [PVBusSlave](#).

14.7 FVP_VE_Cortex-A17x1

List of instances in FVP_VE_Cortex-A17x1.

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBUSSlave](#).

daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_aliased.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_4.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_8.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

daughterboard.hdlcd.busmaster

Type: [PVBusMaster](#).

daughterboard.hdlcd.busslave

Type: [PVBusSlave](#).

daughterboard.hdlcd.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

daughterboard.hdlcd.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.nonsecure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureDRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmbs

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

gic400

GIC-400 Generic Interrupt Controller.

Type: [GIC_400](#).

gic400.vgic_bus_slave

Type: [PVBusSlave](#).

globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

globalcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

globalcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_0_1.busslave

Type: [PVBusSlave](#).

motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_2_3.busslave

Type: [PVBusSlave](#).

motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock24MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock35MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock50Hz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clockCLCD`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.dummy_local_dap_rom`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_local_dap_rom.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.dummy_ram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_ram.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.dummy_usb`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_usb.bus_slave`

Type: [PVBUSSlave](#).

motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash0.map

Type: [PVBusMapper](#).

motherboard.flash0.mbs

Type: [PVBusSlave](#).

motherboard.flash0.rmbs

Type: [PVBusSlave](#).

motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash1.map

Type: [PVBusMapper](#).

motherboard.flash1.mbs

Type: [PVBusSlave](#).

motherboard.flash1.rmbs

Type: [PVBusSlave](#).

motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

motherboard.mmc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

motherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart0.busslave

Type: [PVBUSlave](#).

motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart0.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart0.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart1`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart1.busslave`

Type: [PVBusSlave](#).

`motherboard.pl011_uart1.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart1.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart1.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart1.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart1.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart2.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart3.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart3.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart3.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart3.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart3.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl031_rtc`

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

`motherboard.pl031_rtc.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl031_rtc.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

motherboard.pl041_aaci.busslave

Type: [PVBUSSlave](#).

motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

motherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`motherboard.pl180_mci`

ARM PrimeCell Multimedia Card Interface (PL180).

Type: `PL180_MCI`.

`motherboard.pl180_mci.busslave`

Type: `PVBusSlave`.

`motherboard.ps2keyboard`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked `PS2Data` signals which can be routed to a `PL050_KMI` component.

Type: `PS2Keyboard`.

`motherboard.ps2keyboard.ps2_clocktimer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

`motherboard.ps2keyboard.ps2_clocktimer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.ps2mouse`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

`motherboard.ps2mouse.ps2_clocktimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.psram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.psram.bus_slave`

Type: [PVBusSlave](#).

`motherboard.smisc_91c111`

SMSC 91C111 ethernet controller.

Type: `SMSC_91C111`.

`motherboard.smc_91c111.SMSC_slave`

Type: `PVBusSlave`.

`motherboard.sp805_wdog`

ARM Watchdog Module(SP805).

Type: `SP805_Watchdog`.

`motherboard.sp805_wdog.busslave`

Type: `PVBusSlave`.

`motherboard.sp805_wdog.clocktimer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

`motherboard.sp805_wdog.clocktimer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`motherboard.sp805_wdog.clocktimer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`motherboard.sp805_wdog.clocktimer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`motherboard.sp810_sysctrl`

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

`motherboard.sp810_sysctrl.busslave`

Type: `PVBusSlave`.

`motherboard.sp810_sysctrl.clkdiv_clk0`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk2`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk3`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.terminal_0`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_1`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_2`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_3`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.ve_sysregs`

Type: [VE_SysRegs](#).

`motherboard.ve_sysregs.busslave`

Type: [PVBUSlave](#).

`motherboard.virtioblockdevice`

virtio block device.

Type: [VirtioBlockDevice](#).

`motherboard.virtioblockdevice.register_slave`

Type: [PVBUSlave](#).

motherboard.virtioblockdevice.virtio_master

Type: [PVBusMaster](#).

motherboard.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

motherboard.virtiop9device.mmio_slave

Type: [PVBusSlave](#).

motherboard.virtiop9device.virtio_master

Type: [PVBusMaster](#).

motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.vram.bus_slave

Type: [PVBUSSlave](#).

14.8 FVP_VE_Cortex-A17x1-A7x1

List of instances in FVP_VE_Cortex-A17x1-A7x1.

FVP_VE_Cortex-A17x1-A7x1 instances

coretile

Dual cluster ARM Cortex-A17x1 and ARM Cortex-A7x1 Core Tile.

Type: [ARM_Cortex_A17x1_A7x1_CT](#).

coretile.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

coretile.cci400.cciinterconnect

Type: [PVCACHE](#).

coretile.cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIREGISTERS](#).

coretile.cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

coretile.cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

coretile.cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

coretile.cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

coretile.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

coretile.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

coretile.cluster0

ARM Cortex-A17 Cluster CT model.

Type: [Cluster_ARM_Cortex-A17](#).

coretile.cluster0.acp_mapper

Type: [PVBusMapper](#).

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.coresight_mapper

Type: [PVBusMapper](#).

daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc.bus_slave

Type: [PVBusSlave](#).

daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc_phy.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_aliased.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_4.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_8.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

daughterboard.hdlcd.busmaster

Type: [PVBusMaster](#).

daughterboard.hdlcd.busslave

Type: [PVBusSlave](#).

daughterboard.hdlcd.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

daughterboard.hdlcd.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

daughterboard.hdlcd.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.hdlcd.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

daughterboard.nonsecure_region

Allow [TrustZone](#) secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.nonsecure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureDRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmbs

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_0_1.busslave

Type: [PVBusSlave](#).

motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_2_3.busslave

Type: [PVBusSlave](#).

motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

`motherboard.Timer_2_3.counter1`

Internal component used by SP804 Timer module.

Type: `CounterModule`.

`motherboard.audioout`

SDL based Audio Output for PL041_AACI.

Type: `AudioOut_SDL`.

`motherboard.clock100Hz`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`motherboard.clock24MHz`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`motherboard.clock35MHz`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`motherboard.clock50Hz`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`motherboard.clockCLCD`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`motherboard.dummy_local_dap_rom`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`motherboard.dummy_local_dap_rom.bus_slave`

Type: `PVBusSlave`.

motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_ram.bus_slave

Type: [PVBusSlave](#).

motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_usb.bus_slave

Type: [PVBusSlave](#).

motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash0.map

Type: [PVBusMapper](#).

motherboard.flash0.mbs

Type: [PVBusSlave](#).

motherboard.flash0.rmbs

Type: [PVBusSlave](#).

motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash1.map

Type: [PVBusMapper](#).

motherboard.flash1.mbs

Type: [PVBusSlave](#).

motherboard.flash1.rmbs

Type: [PVBusSlave](#).

motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

motherboard.mmc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

motherboard.mmc.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

motherboard.mmc.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.mmc.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart0.busslave

Type: [PVBUSlave](#).

motherboard.pl011_uart0.clk_divider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart0.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart0.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart0.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart0.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart1`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart1.busslave`

Type: [PVBUSlave](#).

`motherboard.pl011_uart1.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart1.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart1.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart1.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart1.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart2`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart2.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl011_uart2.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart2.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart2.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart2.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart3.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

motherboard.pl031_rtc.busslave

Type: [PVBUSSlave](#).

motherboard.pl031_rtc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

motherboard.pl031_rtc.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

motherboard.pl031_rtc.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl031_rtc.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

motherboard.pl041_aaci.busslave

Type: [PVBUSSlave](#).

motherboard.pl041_aaci.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

motherboard.pl041_aaci.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a

proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl041_aaci.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl041_aaci.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl050_kmi0`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

`motherboard.pl050_kmi0.busslave`

Type: [PVBusSlave](#).

`motherboard.pl050_kmi0.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl050_kmi1`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

`motherboard.pl050_kmi1.busslave`

Type: [PVBusSlave](#).

`motherboard.pl050_kmi1.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl111_clcd`

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

`motherboard.pl111_clcd.pl11x_clcd`

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

`motherboard.pl111_clcd.pl11x_clcd.busmaster`

Type: [PVBusMaster](#).

`motherboard.pl111_clcd.pl11x_clcd.busslave`

Type: [PVBusSlave](#).

`motherboard.pl111_clcd.pl11x_clcd.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl180_mci`

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

`motherboard.pl180_mci.busslave`

Type: [PVBusSlave](#).

`motherboard.ps2keyboard`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked `PS2Data` signals which can be routed to a `PL050_KMI` component.

Type: [PS2Keyboard](#).

`motherboard.ps2keyboard.ps2_clocktimer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.ps2mouse`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

`motherboard.ps2mouse.ps2_clocktimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.psram.bus_slave

Type: [PVBusSlave](#).

motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

motherboard.smsc_91c111.SMSC_slave

Type: [PVBusSlave](#).

motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

motherboard.sp805_wdog.busslave

Type: [PVBusSlave](#).

motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.sp810_sysctrl`

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

`motherboard.sp810_sysctrl.busslave`

Type: [PVBusSlave](#).

`motherboard.sp810_sysctrl.clkdiv_clk0`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk2`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk3`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.terminal_0`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_1`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_2`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_3`

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.ve_sysregs

Type: [VE_SysRegs](#).

motherboard.ve_sysregs.busslave

Type: [PVBUSSlave](#).

motherboard.virtio_blockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

motherboard.virtio_blockdevice.register_slave

Type: [PVBUSSlave](#).

motherboard.virtio_blockdevice.virtio_master

Type: [PVBUSMaster](#).

motherboard.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

motherboard.virtio_p9device.mmio_slave

Type: [PVBUSSlave](#).

motherboard.virtio_p9device.virtio_master

Type: [PVBUSMaster](#).

motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.vram.bus_slave

Type: [PVBUSSlave](#).

Type: [VEDaughterBoard](#).

daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.coresight_mapper

Type: [PVBusMapper](#).

daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc.bus_slave

Type: [PVBusSlave](#).

daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc_phy.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_aliased.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_4.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_8.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

daughterboard.hdlcd.busmaster

Type: [PVBusMaster](#).

daughterboard.hdlcd.busslave

Type: [PVBusSlave](#).

daughterboard.hdlcd.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.nonsecure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureDRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmbs

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

gic400

GIC-400 Generic Interrupt Controller.

Type: [GIC_400](#).

gic400.vgic_bus_slave

Type: [PVBusSlave](#).

globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

globalcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

globalcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_0_1.busslave

Type: [PVBusSlave](#).

`motherboard.Timer_0_1.clk_div0`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_0_1.clk_div1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_0_1.counter0`

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

`motherboard.Timer_0_1.counter1`

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

`motherboard.Timer_2_3`

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

`motherboard.Timer_2_3.busslave`

Type: [PVBusSlave](#).

`motherboard.Timer_2_3.clk_div0`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_2_3.clk_div1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_2_3.counter0`

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

`motherboard.Timer_2_3.counter1`

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_local_dap_rom.bus_slave

Type: [PVBUSSlave](#).

motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_ram.bus_slave

Type: [PVBUSSlave](#).

`motherboard.dummy_usb`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_usb.bus_slave`

Type: [PVBusSlave](#).

`motherboard.flash0`

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

`motherboard.flash0.map`

Type: [PVBusMapper](#).

`motherboard.flash0.mbs`

Type: [PVBusSlave](#).

`motherboard.flash0.rmbs`

Type: [PVBusSlave](#).

`motherboard.flash1`

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

`motherboard.flash1.map`

Type: [PVBusMapper](#).

`motherboard.flash1.mbs`

Type: [PVBusSlave](#).

`motherboard.flash1.rmbs`

Type: [PVBusSlave](#).

`motherboard.flashloader0`

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

`motherboard.flashloader1`

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

`motherboard.hostbridge`

Host Socket Interface Component.

Type: [HostBridge](#).

`motherboard.mmc`

Generic Multimedia Card.

Type: [MMC](#).

`motherboard.mmc.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart0.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke

wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart1.busslave

Type: [PVBusSlave](#).

motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart2.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart3.busslave

Type: [PVBusSlave](#).

motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

motherboard.pl031_rtc.busslave

Type: [PVBusSlave](#).

motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl031_rtc.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl031_rtc.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl031_rtc.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl041_aaci`

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

`motherboard.pl041_aaci.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl041_aaci.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl041_aaci.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl041_aaci.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl041_aaci.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl050_kmi0`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

`motherboard.pl050_kmi0.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl050_kmi0.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl050_kmi1`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

`motherboard.pl050_kmi1.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl050_kmi1.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl111_clcd`

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

`motherboard.pl111_clcd.pl11x_clcd`

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

`motherboard.pl111_clcd.pl11x_clcd.busmaster`

Type: [PVBUSMaster](#).

`motherboard.pl111_clcd.pl11x_clcd.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl111_clcd.pl11x_clcd.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl180_mci`

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

`motherboard.pl180_mci.busslave`

Type: [PVBUSSlave](#).

`motherboard.ps2keyboard`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

`motherboard.ps2keyboard.ps2_clocktimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.ps2mouse`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

`motherboard.ps2mouse.ps2_clocktimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.psram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.psram.bus_slave

Type: [PVBUSSlave](#).

motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

motherboard.smsc_91c111.SMSC_slave

Type: [PVBUSSlave](#).

motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

motherboard.sp805_wdog.busslave

Type: [PVBUSSlave](#).

motherboard.sp805_wdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

motherboard.sp805_wdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

motherboard.sp805_wdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.sp805_wdog.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

motherboard.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.ve_sysregs

Type: [vE_SysRegs](#).

motherboard.ve_sysregs.busslave

Type: [PVBusSlave](#).

motherboard.virtioblockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

motherboard.virtioblockdevice.register_slave

Type: [PVBusSlave](#).

motherboard.virtioblockdevice.virtio_master

Type: [PVBusMaster](#).

motherboard.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

motherboard.virtiop9device.mmio_slave

Type: [PVBusSlave](#).

motherboard.virtiop9device.virtio_master

Type: [PVBusMaster](#).

motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.vram.bus_slave

Type: [PVBusSlave](#).

daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

daughterboard.hdlcd.busmaster

Type: [PVBusMaster](#).

daughterboard.hdlcd.busslave

Type: [PVBusSlave](#).

daughterboard.hdlcd.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.nonsecure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureDRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmbs

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

gic400

GIC-400 Generic Interrupt Controller.

Type: [GIC_400](#).

gic400.vgic_bus_slave

Type: [PVBusSlave](#).

globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

globalcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

globalcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_0_1.busslave

Type: [PVBusSlave](#).

`motherboard.Timer_0_1.clk_div0`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_0_1.clk_div1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_0_1.counter0`

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

`motherboard.Timer_0_1.counter1`

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

`motherboard.Timer_2_3`

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

`motherboard.Timer_2_3.busslave`

Type: [PVBusSlave](#).

`motherboard.Timer_2_3.clk_div0`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_2_3.clk_div1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_2_3.counter0`

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

`motherboard.Timer_2_3.counter1`

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_local_dap_rom.bus_slave

Type: [PVBUSSlave](#).

motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_ram.bus_slave

Type: [PVBUSSlave](#).

motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_usb.bus_slave

Type: [PVBusSlave](#).

motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash0.map

Type: [PVBusMapper](#).

motherboard.flash0.mbs

Type: [PVBusSlave](#).

motherboard.flash0.rmbs

Type: [PVBusSlave](#).

motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash1.map

Type: [PVBusMapper](#).

motherboard.flash1.mbs

Type: [PVBusSlave](#).

motherboard.flash1.rmbs

Type: [PVBusSlave](#).

motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

motherboard.mmc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.mmc.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.mmc.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.mmc.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart0`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart0.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl011_uart0.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart0.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart0.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke

wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart1.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart2.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart3.busslave

Type: [PVBusSlave](#).

motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

motherboard.pl031_rtc.busslave

Type: [PVBusSlave](#).

motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

motherboard.pl041_aaci.busslave

Type: [PVBUSSlave](#).

motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl050_kmi1

Type: [PL050_KMI](#).

motherboard.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

motherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl180_mci`

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

`motherboard.pl180_mci.busslave`

Type: [PVBUSSlave](#).

`motherboard.ps2keyboard`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

`motherboard.ps2keyboard.ps2_clocktimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.ps2mouse`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

`motherboard.ps2mouse.ps2_clocktimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.psram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.psram.bus_slave

Type: [PVBusSlave](#).

motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

motherboard.smsc_91c111.SMSC_slave

Type: [PVBusSlave](#).

motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

motherboard.sp805_wdog.busslave

Type: [PVBusSlave](#).

motherboard.sp805_wdog.clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

motherboard.sp805_wdog.clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

motherboard.sp805_wdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.sp805_wdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

motherboard.sp810_sysctrl.busslave

Type: [PVBusSlave](#).

motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.ve_sysregs

Type: [vE_SysRegs](#).

motherboard.ve_sysregs.busslave

Type: [PVBusSlave](#).

motherboard.virtioblockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

motherboard.virtioblockdevice.register_slave

Type: [PVBusSlave](#).

motherboard.virtioblockdevice.virtio_master

Type: [PVBusMaster](#).

motherboard.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

motherboard.virtiop9device.mmio_slave

Type: [PVBusSlave](#).

motherboard.virtiop9device.virtio_master

Type: [PVBusMaster](#).

motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.vram.bus_slave

Type: [PVBusSlave](#).

14.11 FVP_VE_Cortex-A17x4-A7x4

List of instances in FVP_VE_Cortex-A17x4-A7x4.

FVP_VE_Cortex-A17x4-A7x4 instances

coretile

Dual cluster ARM Cortex-A17x4 and ARM Cortex-A7x4 Core Tile.

Type: [ARM_Cortex_A17x4_A7x4_CT](#).

coretile.cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

coretile.cci400.cciinterconnect

Type: [PVCache](#).

coretile.cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

coretile.cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

coretile.cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

coretile.cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

coretile.cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

coretile.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

coretile.clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

coretile.dualclustersystemconfigurationblock

Dual Cluster System Configuration Block.

Type: [DualClusterSystemConfigurationBlock](#).

coretile.dualclustersystemconfigurationblock.pvbusslave

Type: [PVBusSlave](#).

coretile.globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

coretile.globalcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

coretile.globalcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

coretile.v7_vgic

System VGIC architecture version v7.

Type: [v7_VGIC](#).

coretile.v7_vgic.vgic_bus_slave

Type: [PVBusSlave](#).

daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.coresight_mapper

Type: [PVBusMapper](#).

daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc.bus_slave

Type: [PVBusSlave](#).

daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc_phy.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_aliased.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_4.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_8.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

daughterboard.hdlcd.busmaster

Type: [PVBusMaster](#).

daughterboard.hdlcd.busslave

Type: [PVBusSlave](#).

daughterboard.hdlcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.nonsecure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureDRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmb

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_0_1.busslave

Type: [PVBusSlave](#).

motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_0_1.clk_div1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_0_1.counter0`

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

`motherboard.Timer_0_1.counter1`

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

`motherboard.Timer_2_3`

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

`motherboard.Timer_2_3.busslave`

Type: [PVBusSlave](#).

`motherboard.Timer_2_3.clk_div0`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_2_3.clk_div1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_2_3.counter0`

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

`motherboard.Timer_2_3.counter1`

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

`motherboard.audioout`

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

`motherboard.clock100Hz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock24MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock35MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock50Hz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clockCLCD`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.dummy_local_dap_rom`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_local_dap_rom.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.dummy_ram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_ram.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.dummy_usb`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_usb.bus_slave`

Type: [PVBUSSlave](#).

motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash0.map

Type: [PVBusMapper](#).

motherboard.flash0.mbs

Type: [PVBusSlave](#).

motherboard.flash0.rmbs

Type: [PVBusSlave](#).

motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash1.map

Type: [PVBusMapper](#).

motherboard.flash1.mbs

Type: [PVBusSlave](#).

motherboard.flash1.rmbs

Type: [PVBusSlave](#).

motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

motherboard.mmc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

`motherboard.mmc.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [`ClockTimerThread64`](#).

`motherboard.mmc.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [`SchedulerThread`](#).

`motherboard.mmc.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart3.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart3.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart3.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart3.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart3.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl031_rtc`

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

`motherboard.pl031_rtc.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl031_rtc.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

motherboard.pl041_aaci.busslave

Type: [PVBUSSlave](#).

motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

motherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`motherboard.pl180_mci`

ARM PrimeCell Multimedia Card Interface (PL180).

Type: `PL180_MCI`.

`motherboard.pl180_mci.busslave`

Type: `PVBusSlave`.

`motherboard.ps2keyboard`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked `PS2Data` signals which can be routed to a `PL050_KMI` component.

Type: `PS2Keyboard`.

`motherboard.ps2keyboard.ps2_clocktimer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

`motherboard.ps2keyboard.ps2_clocktimer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.ps2mouse`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

`motherboard.ps2mouse.ps2_clocktimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.psram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.psram.bus_slave`

Type: [PVBusSlave](#).

`motherboard.smisc_91c111`

SMSC 91C111 ethernet controller.

Type: `SMSC_91C111`.

`motherboard.smc_91c111.SMSC_slave`

Type: `PVBusSlave`.

`motherboard.sp805_wdog`

ARM Watchdog Module(SP805).

Type: `SP805_Watchdog`.

`motherboard.sp805_wdog.busslave`

Type: `PVBusSlave`.

`motherboard.sp805_wdog.clocktimer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

`motherboard.sp805_wdog.clocktimer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`motherboard.sp805_wdog.clocktimer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`motherboard.sp805_wdog.clocktimer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`motherboard.sp810_sysctrl`

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

`motherboard.sp810_sysctrl.busslave`

Type: `PVBusSlave`.

`motherboard.sp810_sysctrl.clkdiv_clk0`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk2`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk3`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.terminal_0`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_1`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_2`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_3`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.ve_sysregs`

Type: [VE_SysRegs](#).

`motherboard.ve_sysregs.busslave`

Type: [PVBUSlave](#).

`motherboard.virtioBlockDevice`

virtio block device.

Type: [VirtioBlockDevice](#).

`motherboard.virtioBlockDevice.register_slave`

Type: [PVBUSlave](#).

motherboard.virtioblockdevice.virtio_master

Type: [PVBusMaster](#).

motherboard.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

motherboard.virtiop9device.mmio_slave

Type: [PVBusSlave](#).

motherboard.virtiop9device.virtio_master

Type: [PVBusMaster](#).

motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.vram.bus_slave

Type: [PVBUSSlave](#).

14.12 FVP_VE_Cortex-A5x1

List of instances in FVP_VE_Cortex-A5x1.

daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.coresight_mapper

Type: [PVBUSMapper](#).

daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc.bus_slave

Type: [PVBUSSlave](#).

daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc_phy.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_aliased.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_4.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_8.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

daughterboard.hdlcd.busmaster

Type: [PVBusMaster](#).

daughterboard.hdlcd.busslave

Type: [PVBusSlave](#).

daughterboard.hdlcd.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.nonsecure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureDRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmbs

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_0_1.busslave

Type: [PVBusSlave](#).

motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_2_3.busslave

Type: [PVBUSSlave](#).

motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock35MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock50Hz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clockCLCD`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.dummy_local_dap_rom`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_local_dap_rom.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.dummy_ram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_ram.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.dummy_usb`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_usb.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.flash0`

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

`motherboard.flash0.map`

Type: [PVBUSMapper](#).

motherboard.flash0.mbs

Type: [PVBUSSlave](#).

motherboard.flash0.rmbs

Type: [PVBUSSlave](#).

motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash1.map

Type: [PVBUSMapper](#).

motherboard.flash1.mbs

Type: [PVBUSSlave](#).

motherboard.flash1.rmbs

Type: [PVBUSSlave](#).

motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

motherboard.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

motherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

`motherboard.mmc.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.mmc.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart0`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart0.busslave`

Type: [PVBusSlave](#).

`motherboard.pl011_uart0.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart0.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart0.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart0.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart0.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart1.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart2.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart2.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart2.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart2.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart2.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart3`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart3.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl011_uart3.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart3.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

motherboard.pl031_rtc.busslave

Type: [PVBUSSlave](#).

motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl031_rtc.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl041_aaci`

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

`motherboard.pl041_aaci.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl041_aaci.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl041_aaci.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl041_aaci.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl041_aaci.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl050_kmi0`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

`motherboard.pl050_kmi0.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl050_kmi0.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

motherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl180_mci`

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

`motherboard.pl180_mci.busslave`

Type: [PVBusSlave](#).

`motherboard.ps2keyboard`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

`motherboard.ps2keyboard.ps2_clocktimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.psram.bus_slave

Type: [PVBusSlave](#).

motherboard.smisc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

motherboard.smisc_91c111.SMISC_slave

Type: [PVBusSlave](#).

motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

motherboard.sp805_wdog.busslave

Type: [PVBusSlave](#).

motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

motherboard.sp810_sysctrl.busslave

Type: [PVBusSlave](#).

motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk2`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk3`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.terminal_0`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_1`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_2`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_3`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.ve_sysregs`

Type: [VE_SysRegs](#).

`motherboard.ve_sysregs.busslave`

Type: [PVBusSlave](#).

`motherboard.virtioblockdevice`

virtio block device.

Type: [VirtioBlockDevice](#).

`motherboard.virtioblockdevice.register_slave`

Type: [PVBusSlave](#).

`motherboard.virtioblockdevice.virtio_master`

Type: [PVBusMaster](#).

`motherboard.virtiop9device`

virtio P9 server.

Type: [VirtioP9Device](#).

`motherboard.virtiop9device.mmio_slave`

Type: [PVBusSlave](#).

motherboard.virtio9device.virtio_master

Type: [PVBusMaster](#).

motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.vram.bus_slave

Type: [PVBusSlave](#).

periph_clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

14.13 FVP_VE_Cortex-A5x2

List of instances in FVP_VE_Cortex-A5x2.

FVP_VE_Cortex-A5x2 instances

cluster

ARM CORTEXA5MP Cluster CT model.

Type: [Cluster_ARM_Cortex-A5MP](#).

cluster.acp_mapper

Type: [PVBusMapper](#).

cluster.cpu0

ARM CORTEXA5MP CT model.

Type: [ARM_Cortex-A5MP](#).

cluster.cpu0.UTLB

Type: [TLB](#).

cluster.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

cluster.cpu0.l1dcache.upstream[0]

Type: [PVBusSlave](#).

cluster.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

cluster.cpu0.l1icache.upstream[0]

Type: [PVBusSlave](#).

cluster.cpu0.utlb

TLB - instruction, data or unified.

Type: TlbCadi.

cluster.cpu1

ARM CORTEXA5MP CT model.

Type: [ARM_Cortex-A5MP](#).**cluster.cpu1.UTLB**

Type: TLB.

cluster.cpu1.l1dcache

PV Cache.

Type: PVCache.

cluster.cpu1.l1dcache.upstream[0]Type: [PVBusSlave](#).**cluster.cpu1.l1icache**

PV Cache.

Type: PVCache.

cluster.cpu1.l1icache.upstream[0]Type: [PVBusSlave](#).**cluster.cpu1.utlb**

TLB - instruction, data or unified.

Type: TlbCadi.

Type: [PVBUSSlave](#).

cluster.12_flusher

Type: [AsyncCacheFlushUnit](#).

daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.coresight_mapper

Type: [PVBusMapper](#).

daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc.bus_slave

Type: [PVBusSlave](#).

daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc_phy.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_aliased.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_4.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_8.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

daughterboard.hdlcd.busmaster

Type: [PVBusMaster](#).

daughterboard.hdlcd.busslave

Type: [PVBusSlave](#).

daughterboard.hdlcd.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

daughterboard.hdlcd.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

daughterboard.hdlcd.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.hdlcd.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

daughterboard.nonsecure_region

Allow [TrustZone](#) secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.nonsecure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureDRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmbs

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_0_1.busslave

Type: [PVBusSlave](#).

motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_2_3.busslave

Type: [PVBusSlave](#).

motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

`motherboard.Timer_2_3.counter1`

Internal component used by SP804 Timer module.

Type: `CounterModule`.

`motherboard.audioout`

SDL based Audio Output for PL041_AACI.

Type: `AudioOut_SDL`.

`motherboard.clock100Hz`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`motherboard.clock24MHz`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`motherboard.clock35MHz`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`motherboard.clock50Hz`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`motherboard.clockCLCD`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`motherboard.dummy_local_dap_rom`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`motherboard.dummy_local_dap_rom.bus_slave`

Type: `PVBusSlave`.

motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_ram.bus_slave

Type: [PVBusSlave](#).

motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_usb.bus_slave

Type: [PVBusSlave](#).

motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash0.map

Type: [PVBusMapper](#).

motherboard.flash0.mbs

Type: [PVBusSlave](#).

motherboard.flash0.rmbs

Type: [PVBusSlave](#).

motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash1.map

Type: [PVBusMapper](#).

motherboard.flash1.mbs

Type: [PVBusSlave](#).

motherboard.flash1.rmbs

Type: [PVBusSlave](#).

motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

`motherboard.mmc.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

`motherboard.mmc.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

`motherboard.mmc.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.mmc.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart0`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart0.busslave`

Type: [PVBUSlave](#).

`motherboard.pl011_uart0.clk_divider`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart0.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart0.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart0.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart0.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart1`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart1.busslave`

Type: [PVBUSlave](#).

`motherboard.pl011_uart1.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart1.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart1.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart1.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart1.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart2`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart2.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl011_uart2.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart2.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart2.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart2.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart3.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

motherboard.pl031_rtc.busslave

Type: [PVBusSlave](#).

motherboard.pl031_rtc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

motherboard.pl031_rtc.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

motherboard.pl031_rtc.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl031_rtc.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

motherboard.pl041_aaci.busslave

Type: [PVBusSlave](#).

motherboard.pl041_aaci.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

motherboard.pl041_aaci.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a

proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl041_aaci.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl041_aaci.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl050_kmi0`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

`motherboard.pl050_kmi0.busslave`

Type: [PVBusSlave](#).

`motherboard.pl050_kmi0.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl050_kmi1`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

`motherboard.pl050_kmi1.busslave`

Type: [PVBusSlave](#).

`motherboard.pl050_kmi1.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl111_clcd`

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

`motherboard.pl111_clcd.pl11x_clcd`

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

`motherboard.pl111_clcd.pl11x_clcd.busmaster`

Type: [PVBusMaster](#).

motherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

motherboard.pl180_mci.busslave

Type: [PVBusSlave](#).

motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.ps2mouse`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

`motherboard.ps2mouse.ps2_clocktimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.psram.bus_slave

Type: [PVBusSlave](#).

motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

motherboard.smsc_91c111.SMSC_slave

Type: [PVBusSlave](#).

motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

motherboard.sp805_wdog.busslave

Type: [PVBusSlave](#).

motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.sp810_sysctrl`

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

`motherboard.sp810_sysctrl.busslave`

Type: [PVBusSlave](#).

`motherboard.sp810_sysctrl.clkdiv_clk0`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk2`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk3`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.terminal_0`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_1`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_2`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_3`

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.ve_sysregs

Type: [VE_SysRegs](#).

motherboard.ve_sysregs.busslave

Type: [PVBUSSlave](#).

motherboard.virtio_blockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

motherboard.virtio_blockdevice.register_slave

Type: [PVBUSSlave](#).

motherboard.virtio_blockdevice.virtio_master

Type: [PVBUSMaster](#).

motherboard.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

motherboard.virtio_p9device.mmio_slave

Type: [PVBUSSlave](#).

motherboard.virtio_p9device.virtio_master

Type: [PVBUSMaster](#).

motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.vram.bus_slave

Type: [PVBUSSlave](#).

periph_clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

14.14 FVP_VE_Cortex-A5x4

List of instances in FVP_VE_Cortex-A5x4.

daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.coresight_mapper

Type: [PVBUSMapper](#).

daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc.bus_slave

Type: [PVBUSSlave](#).

daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc_phy.bus_slave

Type: [PVBUSSlave](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBUSSlave](#).

daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_aliased.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_4.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_8.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

daughterboard.hdlcd.busmaster

Type: [PVBusMaster](#).

daughterboard.hdlcd.busslave

Type: [PVBusSlave](#).

daughterboard.hdlcd.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

daughterboard.hdlcd.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.nonsecure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureDRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmbs

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_0_1.busslave

Type: [PVBusSlave](#).

motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_2_3.busslave

Type: [PVBUSSlave](#).

motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_ram.bus_slave

Type: [PVBusSlave](#).

motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_usb.bus_slave

Type: [PVBusSlave](#).

motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash0.map

Type: [PVBusMapper](#).

motherboard.flash0.mbs

Type: [PVBusSlave](#).

motherboard.flash0.rmbs

Type: [PVBusSlave](#).

motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash1.map

Type: [PVBUSMapper](#).

motherboard.flash1.mbs

Type: [PVBUSSlave](#).

motherboard.flash1.rmbs

Type: [PVBUSSlave](#).

motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

motherboard.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

motherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

motherboard.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart0.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart1.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart1.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart1.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart1.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart1.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart2`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart2.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl011_uart2.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart2.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart3.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke

wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

motherboard.pl031_rtc.busslave

Type: [PVBUSSlave](#).

motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

motherboard.pl041_aaci.busslave

Type: [PVBusSlave](#).

motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi0.busslave

Type: [PVBusSlave](#).

motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi1.busslave

Type: [PVBusSlave](#).

motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

motherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

`motherboard.pl180_mci.busslave`

Type: [PVBusSlave](#).

`motherboard.ps2keyboard`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

`motherboard.ps2keyboard.ps2_clocktimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.ps2mouse`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

`motherboard.ps2mouse.ps2_clocktimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.psram.bus_slave

Type: [PVBusSlave](#).

motherboard.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

motherboard.smc_91c111.SMSC_slave

Type: [PVBusSlave](#).

motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

motherboard.sp805_wdog.busslave

Type: [PVBusSlave](#).

motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.sp805_wdog.clocktimer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [`ClockTimerThread64`](#).

`motherboard.sp805_wdog.clocktimer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [`SchedulerThread`](#).

`motherboard.sp805_wdog.clocktimer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [`SchedulerThreadEvent`](#).

`motherboard.sp810_sysctrl`

PrimeXsys System Controller (SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [`SP810_SysCtrl`](#).

`motherboard.sp810_sysctrl.busslave`

Type: [`PVBusSlave`](#).

`motherboard.sp810_sysctrl.clkdiv_clk0`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [`ClockDivider`](#).

`motherboard.sp810_sysctrl.clkdiv_clk1`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [`ClockDivider`](#).

`motherboard.sp810_sysctrl.clkdiv_clk2`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [`ClockDivider`](#).

`motherboard.sp810_sysctrl.clkdiv_clk3`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.terminal_0`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_1`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_2`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_3`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.ve_sysregs`

Type: [VE_SysRegs](#).

`motherboard.ve_sysregs.busslave`

Type: [PVBusSlave](#).

`motherboard.virtio_blockdevice`

virtio block device.

Type: [VirtioBlockDevice](#).

`motherboard.virtio_blockdevice.register_slave`

Type: [PVBusSlave](#).

`motherboard.virtio_blockdevice.virtio_master`

Type: [PVBusMaster](#).

`motherboard.virtio_p9device`

virtio P9 server.

Type: [VirtioP9Device](#).

`motherboard.virtio_p9device.mmio_slave`

Type: [PVBusSlave](#).

`motherboard.virtio_p9device.virtio_master`

Type: [PVBusMaster](#).

`motherboard.vis`

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

`motherboard.vis.recorder`

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

`motherboard.vis.recorder.playbackDivider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.vis.recorder.playbackTimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.vis.recorder.playbackTimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.vis.recorder.playbackTimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.vis.recorder.playbackTimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.vis.recorder.recordingDivider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.vram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.vram.bus_slave`

Type: [PVBUSSlave](#).

periph_clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster.l2_cache.upstream[6]

Type: [PVBusSlave](#).

cluster.l2_cache.upstream[7]

Type: [PVBusSlave](#).

cluster.l2_cache.upstream[8]

Type: [PVBusSlave](#).

cluster.l2_cache.upstream[9]

Type: [PVBusSlave](#).

cluster.l2_flusher

Type: [AsyncCacheFlushUnit](#).

daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.coresight_mapper

Type: [PVBusMapper](#).

daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc.bus_slave

Type: [PVBusSlave](#).

daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc_phy.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_aliased.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_4.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_8.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

daughterboard.hdlcd.busmaster

Type: [PVBusMaster](#).

daughterboard.hdlcd.busslave

Type: [PVBusSlave](#).

daughterboard.hdlcd.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

daughterboard.hdlcd.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.nonsecure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureDRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmbs

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

globalcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

globalcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_0_1.busslave

Type: [PVBusSlave](#).

motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_2_3.busslave

Type: [PVBUSSlave](#).

motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock35MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock50Hz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clockCLCD`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.dummy_local_dap_rom`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_local_dap_rom.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.dummy_ram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_ram.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.dummy_usb`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_usb.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.flash0`

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

`motherboard.flash0.map`

Type: [PVBUSMapper](#).

motherboard.flash0.mbs

Type: [PVBUSSlave](#).

motherboard.flash0.rmbs

Type: [PVBUSSlave](#).

motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash1.map

Type: [PVBUSMapper](#).

motherboard.flash1.mbs

Type: [PVBUSSlave](#).

motherboard.flash1.rmbs

Type: [PVBUSSlave](#).

motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

motherboard.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

motherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

`motherboard.mmc.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.mmc.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart0`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart0.busslave`

Type: [PVBusSlave](#).

`motherboard.pl011_uart0.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart0.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart0.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart0.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart0.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart1.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart2.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart2.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart2.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart2.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart2.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart3`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart3.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl011_uart3.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart3.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

motherboard.pl031_rtc.busslave

Type: [PVBUSSlave](#).

motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl031_rtc.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl041_aaci`

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

`motherboard.pl041_aaci.busslave`

Type: [PVBusSlave](#).

`motherboard.pl041_aaci.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl041_aaci.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl041_aaci.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl041_aaci.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl050_kmi0`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

`motherboard.pl050_kmi0.busslave`

Type: [PVBusSlave](#).

`motherboard.pl050_kmi0.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

motherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl180_mci`

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

`motherboard.pl180_mci.busslave`

Type: [PVBusSlave](#).

`motherboard.ps2keyboard`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

`motherboard.ps2keyboard.ps2_clocktimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.psram.bus_slave

Type: [PVBusSlave](#).

motherboard.smisc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

motherboard.smisc_91c111.SMISC_slave

Type: [PVBusSlave](#).

motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

motherboard.sp805_wdog.busslave

Type: [PVBUSSlave](#).

motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

motherboard.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk2`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk3`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.terminal_0`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_1`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_2`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_3`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.ve_sysregs`

Type: [VE_SysRegs](#).

`motherboard.ve_sysregs.busslave`

Type: [PVBusSlave](#).

`motherboard.virtioblockdevice`

virtio block device.

Type: [VirtioBlockDevice](#).

`motherboard.virtioblockdevice.register_slave`

Type: [PVBusSlave](#).

`motherboard.virtioblockdevice.virtio_master`

Type: [PVBusMaster](#).

`motherboard.virtiop9device`

virtio P9 server.

Type: [VirtioP9Device](#).

`motherboard.virtiop9device.mmio_slave`

Type: [PVBusSlave](#).

motherboard.virtio9device.virtio_master

Type: [PVBusMaster](#).

motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.vram.bus_slave

Type: [PVBusSlave](#).

14.16 FVP_VE_Cortex-A7x2

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).**daughterboard.clockCLCD**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.coresight_mapper

Type: [PVBusMapper](#).

daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc.bus_slave

Type: [PVBusSlave](#).

daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc_phy.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_aliased.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_4.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_8.pvbus_mapperType: [PVBusMapper](#).**daughterboard.exclusive_monitor**

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).**daughterboard.exclusive_monitor.bus_mapper**Type: [PVBusMapper](#).**daughterboard.hdlcd**

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).**daughterboard.hdlcd.busmaster**Type: [PVBusMaster](#).**daughterboard.hdlcd.busslave**Type: [PVBusSlave](#).**daughterboard.hdlcd.timer**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).**daughterboard.hdlcd.timer.timer**

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.nonsecure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureDRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmbs

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: `MemoryMappedCounterModule`.

globalcounter.pvbus_control_s[0]

Type: `PVBusSlave`.

globalcounter.pvbus_read_s[0]

Type: `PVBusSlave`.

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: `VEMotherBoard`.

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

motherboard.Timer_0_1.busslave

Type: `PVBusSlave`.

motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

motherboard.Timer_2_3.busslave

Type: `PVBusSlave`.

`motherboard.Timer_2_3.clk_div0`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_2_3.clk_div1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_2_3.counter0`

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

`motherboard.Timer_2_3.counter1`

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

`motherboard.audioout`

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

`motherboard.clock100Hz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock24MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock35MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock50Hz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clockCLCD`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.dummy_local_dap_rom`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_local_dap_rom.bus_slave`

Type: [PVBusSlave](#).

`motherboard.dummy_ram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_ram.bus_slave`

Type: [PVBusSlave](#).

`motherboard.dummy_usb`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_usb.bus_slave`

Type: [PVBusSlave](#).

`motherboard.flash0`

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

`motherboard.flash0.map`

Type: [PVBusMapper](#).

`motherboard.flash0.mbs`

Type: [PVBusSlave](#).

`motherboard.flash0.rmbs`

Type: [PVBusSlave](#).

`motherboard.flash1`

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

`motherboard.flash1.map`

Type: [PVBusMapper](#).

`motherboard.flash1.mbs`

Type: [PVBusSlave](#).

motherboard.flash1.rmb

Type: [PVBUSSlave](#).

motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

motherboard.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

motherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

motherboard.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart0.busslave

Type: [PVBusSlave](#).

motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart1.busslave

Type: [PVBusSlave](#).

motherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart1.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

`motherboard.pl011_uart1.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`motherboard.pl011_uart1.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`motherboard.pl011_uart1.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`motherboard.pl011_uart2`

ARM PrimeCell UART(PL011).

Type: `PL011_Uart`.

`motherboard.pl011_uart2.busslave`

Type: `PVBusSlave`.

`motherboard.pl011_uart2.clk_divider`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`motherboard.pl011_uart2.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

`motherboard.pl011_uart2.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`motherboard.pl011_uart2.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`motherboard.pl011_uart2.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`motherboard.pl011_uart3`

ARM PrimeCell UART(PL011).

Type: `PL011_Uart`.

`motherboard.pl011_uart3.busslave`

Type: `PVBusSlave`.

`motherboard.pl011_uart3.clk_divider`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`motherboard.pl011_uart3.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

`motherboard.pl011_uart3.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`motherboard.pl011_uart3.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart3.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl031_rtc`

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

`motherboard.pl031_rtc.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl031_rtc.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl031_rtc.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl031_rtc.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl031_rtc.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl041_aaci`

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

`motherboard.pl041_aaci.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl041_aaci.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

`motherboard.pl041_aaci.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`motherboard.pl041_aaci.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`motherboard.pl041_aaci.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`motherboard.pl050_kmi0`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: `PL050_KMI`.

`motherboard.pl050_kmi0.busslave`

Type: `PVBusSlave`.

`motherboard.pl050_kmi0.clk_divider`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`motherboard.pl050_kmi1`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: `PL050_KMI`.

`motherboard.pl050_kmi1.busslave`

Type: `PVBusSlave`.

`motherboard.pl050_kmi1.clk_divider`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

motherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

motherboard.pl180_mci.busslave

Type: [PVBUSSlave](#).

`motherboard.ps2keyboard`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

`motherboard.ps2keyboard.ps2_clocktimer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.ps2mouse`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

`motherboard.ps2mouse.ps2_clocktimer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`motherboard.ps2mouse.ps2_clocktimer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`motherboard.ps2mouse.ps2_clocktimer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`motherboard.psram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`motherboard.psram.bus_slave`

Type: `PVBusSlave`.

`motherboard.smsc_91c111`

SMSC 91C111 ethernet controller.

Type: `SMSC_91C111`.

`motherboard.smsc_91c111.SMSC_slave`

Type: `PVBusSlave`.

`motherboard.sp805_wdog`

ARM Watchdog Module(SP805).

Type: `SP805_Watchdog`.

`motherboard.sp805_wdog.busslave`

Type: `PVBusSlave`.

`motherboard.sp805_wdog.clocktimer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

`motherboard.sp805_wdog.clocktimer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

`motherboard.sp805_wdog.clocktimer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.sp805_wdog.clocktimer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.sp810_sysctrl`

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

`motherboard.sp810_sysctrl.busslave`

Type: [PVBusSlave](#).

`motherboard.sp810_sysctrl.clkdiv_clk0`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk1`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk2`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk3`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.ve_sysregs

Type: [VE_SysRegs](#).

motherboard.ve_sysregs.busslave

Type: [PVBusSlave](#).

motherboard.virtioblockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

motherboard.virtioblockdevice.register_slave

Type: [PVBusSlave](#).

motherboard.virtioblockdevice.virtio_master

Type: [PVBusMaster](#).

motherboard.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

motherboard.virtiop9device.mmio_slave

Type: [PVBusSlave](#).

motherboard.virtiop9device.virtio_master

Type: [PVBusMaster](#).

motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.vis.recorder.playbackTimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.vis.recorder.playbackTimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.vis.recorder.playbackTimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.vis.recorder.playbackTimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.vis.recorder.recordingDivider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.vram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.vram.bus_slave`

Type: [PVBusSlave](#).

Type: [PVBusSlave](#).

daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc_phy.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_aliased.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_4.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_8.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

daughterboard.hdlcd.busmaster

Type: [PVBusMaster](#).

daughterboard.hdlcd.busslave

Type: [PVBusSlave](#).

daughterboard.hdlcd.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

daughterboard.hdlcd.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

daughterboard.hdlcd.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.hdlcd.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

daughterboard.nonsecure_region

Allow [TrustZone](#) secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.nonsecure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureDRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmbs

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

globalcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

globalcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

globalcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_0_1.busslave

Type: [PVBusSlave](#).

motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_2_3.busslave

Type: [PVBusSlave](#).

motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_2_3.clk_div1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_2_3.counter0`

Internal component used by SP804 Timer module.

Type: CounterModule.

`motherboard.Timer_2_3.counter1`

Internal component used by SP804 Timer module.

Type: CounterModule.

`motherboard.audioout`

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

`motherboard.clock100Hz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock24MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock35MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock50Hz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clockCLCD`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.dummy_local_dap_rom`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_local_dap_rom.bus_slave`

Type: [PVBusSlave](#).

`motherboard.dummy_ram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_ram.bus_slave`

Type: [PVBusSlave](#).

`motherboard.dummy_usb`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_usb.bus_slave`

Type: [PVBusSlave](#).

`motherboard.flash0`

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

`motherboard.flash0.map`

Type: [PVBusMapper](#).

`motherboard.flash0.mbs`

Type: [PVBusSlave](#).

`motherboard.flash0.rmbs`

Type: [PVBusSlave](#).

`motherboard.flash1`

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

`motherboard.flash1.map`

Type: [PVBusMapper](#).

`motherboard.flash1.mbs`

Type: [PVBusSlave](#).

`motherboard.flash1.rmbs`

Type: [PVBusSlave](#).

`motherboard.flashloader0`

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

`motherboard.flashloader1`

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

`motherboard.hostbridge`

Host Socket Interface Component.

Type: [HostBridge](#).

`motherboard.mmc`

Generic Multimedia Card.

Type: [MMC](#).

`motherboard.mmc.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

`motherboard.mmc.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

`motherboard.mmc.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.mmc.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart0`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart0.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl011_uart0.clk_divider`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

motherboard.pl011_uart0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart1.busslave

Type: [PVBUSlave](#).

motherboard.pl011_uart1.clk_divider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart1.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart1.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart1.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart1.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart2`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart2.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl011_uart2.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart2.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart2.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart2.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart2.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart3`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart3.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl011_uart3.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart3.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart3.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart3.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart3.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl031_rtc`

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

`motherboard.pl031_rtc.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl031_rtc.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl031_rtc.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl031_rtc.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl031_rtc.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl041_aaci`

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

`motherboard.pl041_aaci.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl041_aaci.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

motherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

motherboard.pl180_mci.busslave

Type: [PVBusSlave](#).

motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.psram.bus_slave

Type: [PVBUSSlave](#).

motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

motherboard.smsc_91c111.SMSC_slave

Type: [PVBUSSlave](#).

motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

motherboard.sp805_wdog.busslave

Type: [PVBUSSlave](#).

motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

`motherboard.sp805_wdog.clocktimer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.sp805_wdog.clocktimer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.sp810_sysctrl`

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

`motherboard.sp810_sysctrl.busslave`

Type: [PVBusSlave](#).

`motherboard.sp810_sysctrl.clkdiv_clk0`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk1`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk2`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk3`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.ve_sysregs

Type: [VE_SysRegs](#).

motherboard.ve_sysregs.busslave

Type: [PVBusSlave](#).

motherboard.virtioblockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

motherboard.virtioblockdevice.register_slave

Type: [PVBusSlave](#).

motherboard.virtioblockdevice.virtio_master

Type: [PVBusMaster](#).

motherboard.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

motherboard.virtiop9device.mmio_slave

Type: [PVBusSlave](#).

motherboard.virtiop9device.virtio_master

Type: [PVBusMaster](#).

motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.vis.recorder.playbackTimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.vis.recorder.playbackTimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.vis.recorder.playbackTimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.vis.recorder.playbackTimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.vis.recorder.recordingDivider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.vram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.vram.bus_slave`

Type: [PVBusSlave](#).

14.18 FVP_VE_Cortex-A9x1

List of instances in FVP_VE_Cortex-A9x1.

FVP_VE_Cortex-A9x1 instances

cluster

ARM CORTEXA9MP Cluster CT model.

Type: `Cluster_ARM_Cortex-A9MP`.

cluster.acp_mapper

Type: `PVBusMapper`.

cluster.cpu0

ARM CORTEXA9MP CT model.

Type: `ARM_Cortex-A9MP`.

cluster.cpu0.UTLB

Type: [AsyncCacheFlushUnit](#).

daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: `VEDaughterBoard`.

daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

daughterboard.coresight_mapper

Type: `PVBusMapper`.

daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

daughterboard.dmc.bus_slave

Type: `PVBusSlave`.

daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

daughterboard.dmc_phy.bus_slave

Type: `PVBusSlave`.

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

daughterboard.dram.bus_slave

Type: `PVBusSlave`.

daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: `TZSwitch`.

daughterboard.dram_aliased.pvbus_mapper

Type: `PVBusMapper`.

daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: `TZSwitch`.

daughterboard.dram_limit_4.pvbus_mapper

Type: `PVBusMapper`.

daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_8.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

daughterboard.hdlcd.busmaster

Type: [PVBusMaster](#).

daughterboard.hdlcd.busslave

Type: [PVBusSlave](#).

daughterboard.hdlcd.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

daughterboard.hdlcd.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

daughterboard.hdlcd.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.hdlcd.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.nonsecure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureDRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmbs

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_0_1.busslave

Type: [PVBusSlave](#).

motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_2_3.busslave

Type: [PVBusSlave](#).

motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_2_3.clk_div1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_2_3.counter0`

Internal component used by SP804 Timer module.

Type: CounterModule.

`motherboard.Timer_2_3.counter1`

Internal component used by SP804 Timer module.

Type: CounterModule.

`motherboard.audioout`

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

`motherboard.clock100Hz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock24MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock35MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock50Hz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clockCLCD`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

motherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_ram.bus_slave

Type: [PVBusSlave](#).

motherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.dummy_usb.bus_slave

Type: [PVBusSlave](#).

motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash0.map

Type: [PVBusMapper](#).

motherboard.flash0.mbs

Type: [PVBusSlave](#).

motherboard.flash0.rmbs

Type: [PVBusSlave](#).

motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash1.map

Type: [PVBusMapper](#).

motherboard.flash1.mbs

Type: [PVBusSlave](#).

motherboard.flash1.rmbs

Type: [PVBusSlave](#).

motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

motherboard.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

motherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

motherboard.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart0.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart0.clk_divider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart0.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

`motherboard.pl011_uart0.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart0.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart0.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart1`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart1.busslave`

Type: [PVBUSlave](#).

`motherboard.pl011_uart1.clk_divider`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart1.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart1.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart1.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart1.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart2`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart2.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl011_uart2.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart2.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart2.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart2.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart2.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart3`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart3.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl011_uart3.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart3.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart3.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart3.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

motherboard.pl031_rtc.busslave

Type: [PVBUSSlave](#).

motherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

motherboard.pl041_aaci.busslave

Type: [PVBUSSlave](#).

motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl041_aaci.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl041_aaci.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl041_aaci.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl050_kmi0`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

`motherboard.pl050_kmi0.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl050_kmi0.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl050_kmi1`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

`motherboard.pl050_kmi1.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl050_kmi1.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

motherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

motherboard.pl180_mci.busslave

Type: [PVBusSlave](#).

motherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

motherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

motherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.psram.bus_slave

Type: [PVBusSlave](#).

motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

motherboard.smsc_91c111.SMSC_slave

Type: [PVBusSlave](#).

motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

motherboard.sp805_wdog.busslave

Type: [PVBusSlave](#).

motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

motherboard.sp810_sysctrl.busslave

Type: [PVBusSlave](#).

motherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.ve_sysregs

Type: [VE_SysRegs](#).

motherboard.ve_sysregs.busslave

Type: [PVBusSlave](#).

motherboard.virtioblockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

motherboard.virtioblockdevice.register_slave

Type: [PVBusSlave](#).

motherboard.virtioblockdevice.virtio_master

Type: [PVBusMaster](#).

motherboard.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

motherboard.virtiop9device.mmio_slave

Type: [PVBusSlave](#).

motherboard.virtiop9device.virtio_master

Type: [PVBusMaster](#).

motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.vis.recorder.playbackTimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.vis.recorder.playbackTimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.vis.recorder.playbackTimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.vis.recorder.playbackTimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.vis.recorder.recordingDivider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.vram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.vram.bus_slave`

Type: [PVBusSlave](#).

`periph_clockdivider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

Type: [AsyncCacheFlushUnit](#).

daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.coresight_mapper

Type: [PVBUSMapper](#).

daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc.bus_slave

Type: [PVBUSSlave](#).

daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc_phy.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_aliased.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_4.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_8.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

daughterboard.hdlcd.busmaster

Type: [PVBusMaster](#).

daughterboard.hdlcd.busslave

Type: [PVBusSlave](#).

daughterboard.hdlcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

daughterboard.hdlcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

daughterboard.hdlcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.hdlcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.nonsecure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureDRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmb

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_0_1.busslave

Type: [PVBusSlave](#).

motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_2_3.busslave

Type: [PVBusSlave](#).

motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

motherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

motherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock24MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock35MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock50Hz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clockCLCD`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.dummy_local_dap_rom`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_local_dap_rom.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.dummy_ram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_ram.bus_slave`

Type: [PVBUSSlave](#).

`motherboard.dummy_usb`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_usb.bus_slave`

Type: [PVBUSSlave](#).

motherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash0.map

Type: [PVBusMapper](#).

motherboard.flash0.mbs

Type: [PVBusSlave](#).

motherboard.flash0.rmbs

Type: [PVBusSlave](#).

motherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

motherboard.flash1.map

Type: [PVBusMapper](#).

motherboard.flash1.mbs

Type: [PVBusSlave](#).

motherboard.flash1.rmbs

Type: [PVBusSlave](#).

motherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

motherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

motherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

motherboard.mmc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

motherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart0.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart0.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart0.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart1`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart1.busslave`

Type: [PVBusSlave](#).

`motherboard.pl011_uart1.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart1.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart1.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart1.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart1.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart2.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart3.busslave

Type: [PVBUSSlave](#).

motherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart3.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart3.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart3.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart3.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl031_rtc`

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

`motherboard.pl031_rtc.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl031_rtc.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

motherboard.pl041_aaci.busslave

Type: [PVBUSSlave](#).

motherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

motherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

motherboard.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

motherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

motherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [`ClockTimerThread64`](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [`SchedulerThread`](#).

`motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [`SchedulerThreadEvent`](#).

`motherboard.pl180_mci`

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [`PL180_MCI`](#).

`motherboard.pl180_mci.busslave`

Type: [`PVBusSlave`](#).

`motherboard.ps2keyboard`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked `PS2Data` signals which can be routed to a `PL050_KMI` component.

Type: [`PS2Keyboard`](#).

`motherboard.ps2keyboard.ps2_clocktimer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [`ClockTimerThread`](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [`ClockTimerThread64`](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.ps2mouse`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

`motherboard.ps2mouse.ps2_clocktimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2mouse.ps2_clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.psram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.psram.bus_slave`

Type: [PVBusSlave](#).

`motherboard.smisc_91c111`

SMSC 91C111 ethernet controller.

Type: `SMSC_91C111`.

`motherboard.smc_91c111.SMSC_slave`

Type: `PVBusSlave`.

`motherboard.sp805_wdog`

ARM Watchdog Module(SP805).

Type: `SP805_Watchdog`.

`motherboard.sp805_wdog.busslave`

Type: `PVBusSlave`.

`motherboard.sp805_wdog.clocktimer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

`motherboard.sp805_wdog.clocktimer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`motherboard.sp805_wdog.clocktimer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`motherboard.sp805_wdog.clocktimer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`motherboard.sp810_sysctrl`

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

`motherboard.sp810_sysctrl.busslave`

Type: `PVBusSlave`.

`motherboard.sp810_sysctrl.clkdiv_clk0`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk2`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk3`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.terminal_0`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_1`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_2`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.terminal_3`

Telnet terminal interface.

Type: [TelnetTerminal](#).

`motherboard.ve_sysregs`

Type: [VE_SysRegs](#).

`motherboard.ve_sysregs.busslave`

Type: [PVBUSlave](#).

`motherboard.virtioblockdevice`

virtio block device.

Type: [VirtioBlockDevice](#).

`motherboard.virtioblockdevice.register_slave`

Type: [PVBUSlave](#).

motherboard.virtioblockdevice.virtio_master

Type: [PVBusMaster](#).

motherboard.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

motherboard.virtiop9device.mmio_slave

Type: [PVBusSlave](#).

motherboard.virtiop9device.virtio_master

Type: [PVBusMaster](#).

motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.vram.bus_slave

Type: [PVBUSSlave](#).

periph_clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard

Daughtercard, inspired by the ARM Versatile Express development platform.

Type: [VEDaughterBoard](#).

daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.coresight_mapper

Type: [PVBusMapper](#).

daughterboard.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc.bus_slave

Type: [PVBusSlave](#).

daughterboard.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dmc_phy.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBusSlave](#).

daughterboard.dram_aliased

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_aliased.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_4

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_4.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.dram_limit_8

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.dram_limit_8.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

daughterboard.hdlcd

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

daughterboard.hdlcd.busmaster

Type: [PVBusMaster](#).

daughterboard.hdlcd.busslave

Type: [PVBusSlave](#).

daughterboard.hdlcd.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

daughterboard.hdlcd.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

daughterboard.hdlcd.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.hdlcd.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.introuter

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

daughterboard.nonsecure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.nonsecure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureDRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secureRO

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

daughterboard.secureRO.map

Type: [PVBusMapper](#).

daughterboard.secureRO.mbs

Type: [PVBusSlave](#).

daughterboard.secureRO.rmbs

Type: [PVBusSlave](#).

daughterboard.secureROloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

daughterboard.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.secureSRAM.bus_slave

Type: [PVBusSlave](#).

daughterboard.secure_region

Allow TrustZone secure/normal bus signals to be routed separately.

Type: [TZSwitch](#).

daughterboard.secure_region.pvbus_mapper

Type: [PVBusMapper](#).

daughterboard.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.sram.bus_slave

Type: [PVBusSlave](#).

daughterboard.vedcc

Daughterboard Configuration Control (DCC).

Type: [VEDCC](#).

motherboard

Model inspired by the ARM Versatile Express Motherboard.

Type: [VEMotherBoard](#).

motherboard.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_0_1.busslave

Type: [PVBusSlave](#).

motherboard.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

motherboard.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

motherboard.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

motherboard.Timer_2_3.busslave

Type: [PVBusSlave](#).

motherboard.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_2_3.clk_div1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.Timer_2_3.counter0`

Internal component used by SP804 Timer module.

Type: CounterModule.

`motherboard.Timer_2_3.counter1`

Internal component used by SP804 Timer module.

Type: CounterModule.

`motherboard.audioout`

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

`motherboard.clock100Hz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock24MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock35MHz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clock50Hz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.clockCLCD`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.dummy_local_dap_rom`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_local_dap_rom.bus_slave`

Type: [PVBusSlave](#).

`motherboard.dummy_ram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_ram.bus_slave`

Type: [PVBusSlave](#).

`motherboard.dummy_usb`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.dummy_usb.bus_slave`

Type: [PVBusSlave](#).

`motherboard.flash0`

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

`motherboard.flash0.map`

Type: [PVBusMapper](#).

`motherboard.flash0.mbs`

Type: [PVBusSlave](#).

`motherboard.flash0.rmbs`

Type: [PVBusSlave](#).

`motherboard.flash1`

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

`motherboard.flash1.map`

Type: [PVBusMapper](#).

`motherboard.flash1.mbs`

Type: [PVBusSlave](#).

`motherboard.flash1.rmbs`

Type: [PVBusSlave](#).

`motherboard.flashloader0`

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

`motherboard.flashloader1`

A device that can preload a gzipped image into flash at startup.

Type: `FlashLoader`.

`motherboard.hostbridge`

Host Socket Interface Component.

Type: `HostBridge`.

`motherboard.mmc`

Generic Multimedia Card.

Type: `MMC`.

`motherboard.mmc.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

`motherboard.mmc.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`motherboard.mmc.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`motherboard.mmc.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`motherboard.pl011_uart0`

ARM PrimeCell UART(PL011).

Type: `PL011_Uart`.

`motherboard.pl011_uart0.busslave`

Type: `PVBusSlave`.

`motherboard.pl011_uart0.clk_divider`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart0.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

`motherboard.pl011_uart0.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart0.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart0.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart1`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart1.busslave`

Type: [PVBUSlave](#).

`motherboard.pl011_uart1.clk_divider`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart1.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

motherboard.pl011_uart2.busslave

Type: [PVBUSlave](#).

motherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart2.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart2.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl011_uart3`

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

`motherboard.pl011_uart3.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl011_uart3.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl011_uart3.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl011_uart3.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl011_uart3.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl011_uart3.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl031_rtc`

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

`motherboard.pl031_rtc.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl031_rtc.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl031_rtc.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl031_rtc.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl031_rtc.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl041_aaci`

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

`motherboard.pl041_aaci.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl041_aaci.timer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.pl041_aaci.timer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.pl041_aaci.timer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.pl041_aaci.timer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.pl050_kmi0`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

`motherboard.pl050_kmi0.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl050_kmi0.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.pl050_kmi1`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

`motherboard.pl050_kmi1.busslave`

Type: [PVBUSSlave](#).

`motherboard.pl050_kmi1.clk_divider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

motherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

motherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

motherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

motherboard.pl180_mci.busslave

Type: [PVBusSlave](#).

`motherboard.ps2keyboard`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

`motherboard.ps2keyboard.ps2_clocktimer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.ps2keyboard.ps2_clocktimer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.ps2mouse`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

`motherboard.ps2mouse.ps2_clocktimer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

motherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

motherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

motherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

motherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

motherboard.psram.bus_slave

Type: [PVBUSSlave](#).

motherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

motherboard.smsc_91c111.SMSC_slave

Type: [PVBUSSlave](#).

motherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

motherboard.sp805_wdog.busslave

Type: [PVBUSSlave](#).

motherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

motherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.sp805_wdog.clocktimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.sp805_wdog.clocktimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.sp810_sysctrl`

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

`motherboard.sp810_sysctrl.busslave`

Type: [PVBusSlave](#).

`motherboard.sp810_sysctrl.clkdiv_clk0`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk1`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk2`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.sp810_sysctrl.clkdiv_clk3`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

motherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

motherboard.ve_sysregs

Type: [VE_SysRegs](#).

motherboard.ve_sysregs.busslave

Type: [PVBusSlave](#).

motherboard.virtioblockdevice

virtio block device.

Type: [VirtioBlockDevice](#).

motherboard.virtioblockdevice.register_slave

Type: [PVBusSlave](#).

motherboard.virtioblockdevice.virtio_master

Type: [PVBusMaster](#).

motherboard.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

motherboard.virtiop9device.mmio_slave

Type: [PVBusSlave](#).

motherboard.virtiop9device.virtio_master

Type: [PVBusMaster](#).

motherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

motherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

motherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.vis.recorder.playbackTimer`

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

`motherboard.vis.recorder.playbackTimer.timer`

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

`motherboard.vis.recorder.playbackTimer.timer.thread`

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

`motherboard.vis.recorder.playbackTimer.timer.thread_event`

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

`motherboard.vis.recorder.recordingDivider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`motherboard.vram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

`motherboard.vram.bus_slave`

Type: [PVBusSlave](#).

`periph_clockdivider`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

14.21 FVP_VE_Cortex-R4

List of instances in FVP_VE_Cortex-R4.

FVP_VE_Cortex-R4 instances

daughterboard

Cortex-R4 DaughterBoard for Versatile Express.

Type: [VEDaughterBoardCortex_R4](#).

daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.core

ARM CORTEXR4 CT model.

Type: [ARM_Cortex-R4](#).

daughterboard.core.acp_mapper

Type: [PVBusMapper](#).

daughterboard.core.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

daughterboard.core.cpu0.l1dcache.upstream[0]

Type: [PVBusSlave](#).

daughterboard.core.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

daughterboard.core.cpu0.l1icache.upstream[0]

Type: [PVBusSlave](#).

daughterboard.core.ext_bus

Type: [PVBusLogger](#).

daughterboard.core.ext_bus.mapper

Type: [PVBusMapper](#).

daughterboard.core.l1_incoherent_interconnect

Type: [PVCache](#).

daughterboard.core.l1_incoherent_interconnect.upstream[0]

Type: [PVBusSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[10]

Type: [PVBusSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[11]

Type: [PVBusSlave](#).

Type: [PVBusSlave](#).

daughterboard.core.l2_flusher

Type: [AsyncCacheFlushUnit](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBusSlave](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

daughterboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

daughterboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

daughterboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

daughterboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

daughterboard.pl111_clcd.pl11x_clcd.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

daughterboard.pl111_clcd.pl11x_clcd.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

daughterboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.pl310_l2cc

ARM PrimeCell Level 2 Cache Controller (PL310).

Type: [PL310_L2CC](#).

daughterboard.pl390_gic

Generic Interrupt Controller (PL390).

Type: [PL390_GIC](#).

daughterboard.pl390_gic.busslave_cpu

Type: [PVBusSlave](#).

daughterboard.pl390_gic.busslave_distributor

Type: [PVBusSlave](#).

daughterboard.veinterruptmapper

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

vemotherboard

Model inspired by the ARM Versatile Express Motherboard for R profile.

Type: [VEMotherBoardR](#).

vemotherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

vemotherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.dummy_ram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.dummy_usb.bus_slave

Type: [PVBusSlave](#).

vemotherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

vemotherboard.flash0.map

Type: [PVBusMapper](#).

vemotherboard.flash0.mbs

Type: [PVBusSlave](#).

vemotherboard.flash0.rmbs

Type: [PVBusSlave](#).

vemotherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

vemotherboard.flash1.map

Type: [PVBusMapper](#).

vemotherboard.flash1.mbs

Type: [PVBusSlave](#).

vemotherboard.flash1.rmbs

Type: [PVBusSlave](#).

vemotherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

vemotherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

vemotherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

vemotherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

vemotherboard.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

vemotherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

vemotherboard.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart0.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart1.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart2.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart3.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart4

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart4.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart4.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart4.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart4.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart4.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart4.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

vemotherboard.pl031_rtc.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

vemotherboard.pl041_aaci.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

vemotherboard.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

vemotherboard.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

vemotherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: `PL11x_CLCD`.

vemotherboard.pl111_clcd.pl11x_clcd.busmaster

Type: `PVBusMaster`.

vemotherboard.pl111_clcd.pl11x_clcd.busslave

Type: `PVBusSlave`.

vemotherboard.pl111_clcd.pl11x_clcd.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

vemotherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: `PL180_MCI`.

vemotherboard.pl180_mci.busslave

Type: `PVBusSlave`.

vemotherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked `PS2Data` signals which can be routed to a `PL050_KMI` component.

Type: `PS2Keyboard`.

vemotherboard.ps2keyboard.ps2_clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()`

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

vemotherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.psram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

vemotherboard.smsc_91c111.SMSC_slave

Type: [PVBusSlave](#).

vemotherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

vemotherboard.sp805_wdog.busslave

Type: [PVBusSlave](#).

vemotherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

vemotherboard.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

vemotherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_4

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

vemotherboard.timer_0_1.busslave

Type: [PVBusSlave](#).

vemotherboard.timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

vemotherboard.timer_2_3.busslave

Type: [PVBusSlave](#).

vemotherboard.timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

vemotherboard.timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

vemotherboard.ve_sysregs

Type: [VE_SysRegs](#).

vemotherboard.ve_sysregs.busslave

Type: [PVBusSlave](#).

vemotherboard.video_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.video_ram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

vemotherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

vemotherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

14.22 FVP_VE_Cortex-R5x1

List of instances in FVP_VE_Cortex-R5x1.

FVP_VE_Cortex-R5x1 instances

daughterboard

Cortex-R5x1 DaughterBoard for Versatile Express.

Type: [VEDaughterBoardCortex_R5x1](#).

daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

daughterboard.core

ARM CORTEXR5 Cluster CT model.

Type: `Cluster_ARM_Cortex-R5`.

daughterboard.core.acp_mapper

Type: `PVBusMapper`.

daughterboard.core.cpu0

ARM CORTEXR5 CT model.

Type: `ARM_Cortex-R5`.

daughterboard.core.cpu0.l1dcache

Type: `PVCache`.

daughterboard.core.cpu0.l1dcache.upstream[0]

Type: `PVBusSlave`.

daughterboard.core.cpu0.l1icache

Type: `PVCache`.

daughterboard.core.cpu0.l1icache.upstream[0]

Type: `PVBusSlave`.

daughterboard.core.ext_bus

Type: `PVBusLogger`.

daughterboard.core.ext_bus.mapper

Type: `PVBusMapper`.

daughterboard.core.l1_incoherent_interconnect

Type: `PVCache`.

daughterboard.core.l1_incoherent_interconnect.upstream[0]

Type: `PVBusSlave`.

daughterboard.core.l1_incoherent_interconnect.upstream[10]

Type: `PVBusSlave`.

daughterboard.core.l1_incoherent_interconnect.upstream[11]

Type: [ClockTimerThread64](#).

daughterboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.pl310_l2cc

ARM PrimeCell Level 2 Cache Controller (PL310).

Type: [PL310_L2CC](#).

daughterboard.pl390_gic

Generic Interrupt Controller (PL390).

Type: [PL390_GIC](#).

daughterboard.pl390_gic.busslave_cpu

Type: [PVBUSSlave](#).

daughterboard.pl390_gic.busslave_distributor

Type: [PVBUSSlave](#).

daughterboard.veinterruptmapper

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

vemotherboard

Model inspired by the ARM Versatile Express Motherboard for R profile.

Type: [VEMotherBoardR](#).

vemotherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

vemotherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.dummy_ram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.dummy_usb.bus_slave

Type: [PVBusSlave](#).

vemotherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

vemotherboard.flash0.map

Type: [PVBusMapper](#).

vemotherboard.flash0.mbs

Type: [PVBusSlave](#).

vemotherboard.flash0.rmbs

Type: [PVBusSlave](#).

vemotherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

vemotherboard.flash1.map

Type: [PVBusMapper](#).

vemotherboard.flash1.mbs

Type: [PVBusSlave](#).

vemotherboard.flash1.rmbs

Type: [PVBusSlave](#).

vemotherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

vemotherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

vemotherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

vemotherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

vemotherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart0.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart1.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart2.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart3.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart4

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart4.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart4.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart4.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart4.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart4.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart4.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

vemotherboard.pl031_rtc.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

vemotherboard.pl041_aaci.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

vemotherboard.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

vemotherboard.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

vemotherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

vemotherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

vemotherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

vemotherboard.pl180_mci.busslave

Type: [PVBUSSlave](#).

vemotherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

vemotherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

vemotherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.psram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.smisc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

vemotherboard.smc_91c111.SMSC_slave

Type: [PVBUSSlave](#).

vemotherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

vemotherboard.sp805_wdog.busslave

Type: [PVBUSSlave](#).

vemotherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

vemotherboard.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

vemotherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_4

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

vemotherboard.timer_0_1.busslave

Type: [PVBusSlave](#).

vemotherboard.timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

vemotherboard.timer_2_3.busslave

Type: [PVBusSlave](#).

vemotherboard.timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.ve_sysregs

Type: [VE_SysRegs](#).

vemotherboard.ve_sysregs.busslave

Type: [PVBUSSlave](#).

vemotherboard.video_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.video_ram.bus_slave

Type: [PVBUSSlave](#).

vemotherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

vemotherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

vemotherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

14.23 FVP_VE_Cortex-R5x2

List of instances in FVP_VE_Cortex-R5x2.

FVP_VE_Cortex-R5x2 instances

daughterboard

Cortex-R5x2 DaughterBoard for Versatile Express.

Type: [VEDaughterBoardCortex_R5x2](#).

daughterboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.core

ARM CORTEXR5 Cluster CT model.

Type: [Cluster_ARM_Cortex-R5](#).

daughterboard.core.acp_mapper

Type: [PVBusMapper](#).

daughterboard.core.cpu0

ARM CORTEXR5 CT model.

Type: [ARM_Cortex-R5](#).

daughterboard.core.cpu0.l1dcache

Type: [PVCache](#).

daughterboard.core.cpu0.l1dcache.upstream[0]

Type: [PVBUSSlave](#).

daughterboard.core.cpu0.l1icache

Type: [PVCache](#).

daughterboard.core.cpu0.l1icache.upstream[0]

Type: [PVBUSSlave](#).

daughterboard.core.cpu1

ARM CORTEXR5 CT model.

Type: [ARM_Cortex-R5](#).

daughterboard.core.cpu1.l1dcache

Type: [PVCache](#).

daughterboard.core.cpu1.l1dcache.upstream[0]

Type: [PVBUSSlave](#).

daughterboard.core.cpu1.l1icache

Type: [PVCache](#).

daughterboard.core.cpu1.l1icache.upstream[0]

Type: [PVBUSSlave](#).

daughterboard.core.ext_bus

Type: [PVBUSLogger](#).

daughterboard.core.ext_bus.mapper

Type: [PVBUSMapper](#).

daughterboard.core.l1_incoherent_interconnect

Type: [PVCache](#).

daughterboard.core.l1_incoherent_interconnect.upstream[0]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[10]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[11]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[12]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[13]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[14]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[15]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[16]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[17]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[1]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[2]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[3]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[4]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[5]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[6]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[7]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[8]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[9]

Type: [PVBUSSlave](#).

daughterboard.core.l2_flusher

Type: [AsyncCacheFlushUnit](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBUSSlave](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBUSMapper](#).

daughterboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

daughterboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

daughterboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

daughterboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

daughterboard.pl111_clcd.pl11x_clcd.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

daughterboard.pl111_clcd.pl11x_clcd.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

daughterboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

daughterboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

daughterboard.pl310_l2cc

ARM PrimeCell Level 2 Cache Controller (PL310).

Type: [PL310_L2CC](#).

daughterboard.pl390_gic

Generic Interrupt Controller (PL390).

Type: [PL390_GIC](#).

daughterboard.pl390_gic.busslave_cpu

Type: [PVBUSSlave](#).

daughterboard.pl390_gic.busslave_distributor

Type: [PVBUSSlave](#).

daughterboard.veinterruptmapper

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

vemotherboard

Model inspired by the ARM Versatile Express Motherboard for R profile.

Type: [VEMotherBoardR](#).

vemotherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

vemotherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.dummy_ram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.dummy_usb.bus_slave

Type: [PVBusSlave](#).

vemotherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

vemotherboard.flash0.map

Type: [PVBusMapper](#).

vemotherboard.flash0.mbs

Type: [PVBusSlave](#).

vemotherboard.flash0.rmbs

Type: [PVBusSlave](#).

vemotherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

vemotherboard.flash1.map

Type: [PVBusMapper](#).

vemotherboard.flash1.mbs

Type: [PVBusSlave](#).

vemotherboard.flash1.rmbs

Type: [PVBusSlave](#).

vemotherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

vemotherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

vemotherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

vemotherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

vemotherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart0.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart1.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart2.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart3.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart4

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart4.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart4.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart4.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart4.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart4.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart4.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

vemotherboard.pl031_rtc.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

vemotherboard.pl041_aaci.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

vemotherboard.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

vemotherboard.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

vemotherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

vemotherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

vemotherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

vemotherboard.pl180_mci.busslave

Type: [PVBUSSlave](#).

vemotherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

vemotherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

vemotherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.psram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.smisc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

vemotherboard.smc_91c111.SMSC_slave

Type: [PVBUSSlave](#).

vemotherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

vemotherboard.sp805_wdog.busslave

Type: [PVBUSSlave](#).

vemotherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

vemotherboard.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

vemotherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_4

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

vemotherboard.timer_0_1.busslave

Type: [PVBusSlave](#).

vemotherboard.timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

vemotherboard.timer_2_3.busslave

Type: [PVBusSlave](#).

vemotherboard.timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.ve_sysregs

Type: [VE_SysRegs](#).

vemotherboard.ve_sysregs.busslave

Type: [PVBusSlave](#).

vemotherboard.video_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.video_ram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

vemotherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

vemotherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

14.24 FVP_VE_Cortex-R7x1

List of instances in FVP_VE_Cortex-R7x1.

FVP_VE_Cortex-R7x1 instances

clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard

Type: [AsyncCacheFlushUnit](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBUSSlave](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBUSMapper](#).

daughterboard.periph_clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.pl310_l2cc

ARM PrimeCell Level 2 Cache Controller (PL310).

Type: [PL310_L2CC](#).

daughterboard.veinterruptmapper

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

vemotherboard

Model inspired by the ARM Versatile Express Motherboard for R profile.

Type: [VEMotherBoardR](#).

vemotherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

vemotherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.dummy_ram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.dummy_usb.bus_slave

Type: [PVBusSlave](#).

vemotherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

vemotherboard.flash0.map

Type: [PVBusMapper](#).

vemotherboard.flash0.mbs

Type: [PVBusSlave](#).

vemotherboard.flash0.rmbs

Type: [PVBusSlave](#).

vemotherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

vemotherboard.flash1.map

Type: [PVBusMapper](#).

vemotherboard.flash1.mbs

Type: [PVBusSlave](#).

vemotherboard.flash1.rmbs

Type: [PVBusSlave](#).

vemotherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

vemotherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

vemotherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

vemotherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

vemotherboard.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

vemotherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

vemotherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart0.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart1.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart2.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart3.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart4

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart4.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl011_uart4.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart4.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart4.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke

wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart4.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart4.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

vemotherboard.pl031_rtc.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

vemotherboard.pl041_aaci.busslave

Type: [PVBusSlave](#).

vemotherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

vemotherboard.pl050_kmi0.busslave

Type: [PVBusSlave](#).

vemotherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

vemotherboard.pl050_kmi1.busslave

Type: [PVBusSlave](#).

vemotherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

vemotherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

vemotherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

vemotherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

vemotherboard.pl180_mci.busslave

Type: [PVBusSlave](#).

vemotherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

vemotherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

vemotherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.psram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

vemotherboard.smsc_91c111.SMSC_slave

Type: [PVBusSlave](#).

vemotherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

vemotherboard.sp805_wdog.busslave

Type: [PVBusSlave](#).

vemotherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

vemotherboard.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

vemotherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_4

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

vemotherboard.timer_0_1.busslave

Type: [PVBusSlave](#).

vemotherboard.timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

vemotherboard.timer_2_3.busslave

Type: [PVBUSSlave](#).

vemotherboard.timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

vemotherboard.timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

vemotherboard.ve_sysregs

Type: [VE_SysRegs](#).

vemotherboard.ve_sysregs.busslave

Type: [PVBUSSlave](#).

vemotherboard.video_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.video_ram.bus_slave

Type: [PVBUSSlave](#).

vemotherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

vemotherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

vemotherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

14.25 FVP_VE_Cortex-R7x2

List of instances in FVP_VE_Cortex-R7x2.

FVP_VE_Cortex-R7x2 instances

clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard

Cortex_R7x2 DaughterBoard for Versatile Express.

Type: [VEDaughterBoardCortex_R7x2](#).

daughterboard.core

ARM CORTEXR7 Cluster CT model.

Type: [Cluster_ARM_Cortex-R7](#).

daughterboard.core.acp_mapper

Type: [PVBusMapper](#).

daughterboard.core.cpu0

ARM CORTEXR7 CT model.

Type: [ARM_Cortex-R7](#).

daughterboard.core.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

daughterboard.core.cpu0.l1dcache.upstream[0]

Type: [PVBusSlave](#).

daughterboard.core.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

daughterboard.core.cpu0.l1icache.upstream[0]

Type: [PVBusSlave](#).

daughterboard.core.cpu1

ARM CORTEXR7 CT model.

Type: [ARM_Cortex-R7](#).

daughterboard.core.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

daughterboard.core.cpu1.l1dcache.upstream[0]

Type: [PVBusSlave](#).

daughterboard.core.cpu1.l1icache
PV Cache.
Type: [PVCache](#).

daughterboard.core.cpu1.l1icache.upstream[0]
Type: [PVBusSlave](#).

daughterboard.core.ext_bus
Type: [PVBusLogger](#).

daughterboard.core.ext_bus.mapper
Type: [PVBusMapper](#).

daughterboard.core.l1_incoherent_interconnect
Type: [PVCache](#).

daughterboard.core.l1_incoherent_interconnect.upstream[0]
Type: [PVBusSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[10]
Type: [PVBusSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[11]
Type: [PVBusSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[12]
Type: [PVBusSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[13]
Type: [PVBusSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[14]
Type: [PVBusSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[15]
Type: [PVBusSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[16]
Type: [PVBusSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[17]
Type: [PVBusSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[1]
Type: [PVBusSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[2]
Type: [PVBusSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[3]
Type: [PVBusSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[4]
Type: [PVBusSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[5]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[6]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[7]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[8]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[9]

Type: [PVBUSSlave](#).

daughterboard.core.l2_flusher

Type: [AsyncCacheFlushUnit](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBUSSlave](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBUSMapper](#).

daughterboard.periph_clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.pl310_l2cc

ARM PrimeCell Level 2 Cache Controller (PL310).

Type: [PL310_L2CC](#).

daughterboard.veinterruptmapper

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

vemotherboard

Model inspired by the ARM Versatile Express Motherboard for R profile.

Type: [VEMotherBoardR](#).

vemotherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

vemotherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.dummy_ram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.dummy_usb.bus_slave

Type: [PVBusSlave](#).

vemotherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

vemotherboard.flash0.map

Type: [PVBusMapper](#).

vemotherboard.flash0.mbs

Type: [PVBusSlave](#).

vemotherboard.flash0.rmbs

Type: [PVBusSlave](#).

vemotherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

vemotherboard.flash1.map

Type: [PVBusMapper](#).

vemotherboard.flash1.mbs

Type: [PVBusSlave](#).

vemotherboard.flash1.rmbs

Type: [PVBusSlave](#).

vemotherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

vemotherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

vemotherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

vemotherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

vemotherboard.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

vemotherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart0.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart1.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart2.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart3.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart4

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart4.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart4.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart4.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart4.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart4.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart4.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

vemotherboard.pl031_rtc.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

vemotherboard.pl041_aaci.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl041_aaci.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

vemotherboard.pl041_aaci.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

vemotherboard.pl041_aaci.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl041_aaci.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

vemotherboard.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl050_kmi0.clk_divider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

vemotherboard.pl050_kmi1.busslave

Type: [PVBusSlave](#).

vemotherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

vemotherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

vemotherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

vemotherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

vemotherboard.pl180_mci.busslave

Type: [PVBusSlave](#).

vemotherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

vemotherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

vemotherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.psram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

vemotherboard.smsc_91c111.SMSC_slave

Type: [PVBusSlave](#).

vemotherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

vemotherboard.sp805_wdog.busslave

Type: [PVBusSlave](#).

vemotherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

vemotherboard.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

vemotherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_4

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

vemotherboard.timer_0_1.busslave

Type: [PVBusSlave](#).

vemotherboard.timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

vemotherboard.timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

vemotherboard.timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

vemotherboard.timer_2_3.busslave

Type: [PVBusSlave](#).

vemotherboard.timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

vemotherboard.timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

vemotherboard.ve_sysregs

Type: [VE_SysRegs](#).

vemotherboard.ve_sysregs.busslave

Type: [PVBusSlave](#).

vemotherboard.video_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.video_ram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

vemotherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

vemotherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

14.26 FVP_VE_Cortex-R8x1

List of instances in FVP_VE_Cortex-R8x1.

FVP_VE_Cortex-R8x1 instances

clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard

Cortex_R8x1 DaughterBoard for Versatile Express.

Type: [VEDaughterBoardCortex_R8x1](#).

daughterboard.core

ARM CORTEXR8 Cluster CT model.

Type: [Cluster_ARM_Cortex-R8](#).

daughterboard.core.acp_mapper

Type: [PVBusMapper](#).

daughterboard.core.cpu0

ARM CORTEXR8 CT model.

Type: [ARM_Cortex-R8](#).

daughterboard.core.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

daughterboard.core.cpu0.l1dcache.upstream[0]

Type: [PVBusSlave](#).

daughterboard.core.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

daughterboard.core.cpu0.l1icache.upstream[0]

Type: [PVBusSlave](#).

daughterboard.core.ext_bus

Type: [PVBusLogger](#).

daughterboard.core.ext_bus.mapper

Type: [PVBusMapper](#).

daughterboard.core.l1_incoherent_interconnect

Type: [PVCache](#).

daughterboard.core.l1_incoherent_interconnect.upstream[0]

Type: [PVBusSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[10]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[11]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[12]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[13]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[14]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[15]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[16]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[17]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[1]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[2]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[3]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[4]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[5]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[6]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[7]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[8]

Type: [PVBUSSlave](#).

daughterboard.core.l1_incoherent_interconnect.upstream[9]

Type: [PVBUSSlave](#).

daughterboard.core.l2_flusher

Type: [AsyncCacheFlushUnit](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBUSSlave](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBUSMapper](#).

daughterboard.periph_clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.pl310_l2cc

ARM PrimeCell Level 2 Cache Controller (PL310).

Type: [PL310_L2CC](#).

daughterboard.veinterruptmapper

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

vemotherboard

Model inspired by the ARM Versatile Express Motherboard for R profile.

Type: [VEMotherBoardR](#).

vemotherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

vemotherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.dummy_ram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.dummy_usb.bus_slave

Type: [PVBusSlave](#).

vemotherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

vemotherboard.flash0.map

Type: [PVBusMapper](#).

vemotherboard.flash0.mbs

Type: [PVBusSlave](#).

vemotherboard.flash0.rmbs

Type: [PVBusSlave](#).

vemotherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

vemotherboard.flash1.map

Type: [PVBusMapper](#).

vemotherboard.flash1.mbs

Type: [PVBusSlave](#).

vemotherboard.flash1.rmbs

Type: [PVBusSlave](#).

vemotherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

vemotherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

vemotherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

vemotherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

vemotherboard.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

vemotherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

vemotherboard.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart0.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart1.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart2.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart3.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart4

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart4.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart4.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart4.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart4.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart4.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart4.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

vemotherboard.pl031_rtc.busslave

Type: [PVBusSlave](#).

vemotherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

vemotherboard.pl041_aaci.busslave

Type: [PVBusSlave](#).

vemotherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

vemotherboard.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

vemotherboard.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

vemotherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: `PL11x_CLCD`.

vemotherboard.pl111_clcd.pl11x_clcd.busmaster

Type: `PVBusMaster`.

vemotherboard.pl111_clcd.pl11x_clcd.busslave

Type: `PVBusSlave`.

vemotherboard.pl111_clcd.pl11x_clcd.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

vemotherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: `PL180_MCI`.

vemotherboard.pl180_mci.busslave

Type: `PVBusSlave`.

vemotherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked `PS2Data` signals which can be routed to a `PL050_KMI` component.

Type: `PS2Keyboard`.

vemotherboard.ps2keyboard.ps2_clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()`

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

vemotherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.psram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

vemotherboard.smsc_91c111.SMSC_slave

Type: [PVBusSlave](#).

vemotherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

vemotherboard.sp805_wdog.busslave

Type: [PVBusSlave](#).

vemotherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

vemotherboard.sp810_sysctrl.busslave

Type: [PVBUSlave](#).

vemotherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_4

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

vemotherboard.timer_0_1.busslave

Type: [PVBusSlave](#).

vemotherboard.timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

vemotherboard.timer_2_3.busslave

Type: [PVBusSlave](#).

vemotherboard.timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

vemotherboard.timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

vemotherboard.ve_sysregs

Type: [VE_SysRegs](#).

vemotherboard.ve_sysregs.busslave

Type: [PVBusSlave](#).

vemotherboard.video_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.video_ram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

vemotherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

vemotherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

14.27 FVP_VE_Cortex-R8x2

List of instances in FVP_VE_Cortex-R8x2.

FVP_VE_Cortex-R8x2 instances

clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBUSMapper](#).

daughterboard.periph_clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.pl310_l2cc

ARM PrimeCell Level 2 Cache Controller (PL310).

Type: [PL310_L2CC](#).

daughterboard.veinterruptmapper

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

vemotherboard

Model inspired by the ARM Versatile Express Motherboard for R profile.

Type: [VEMotherBoardR](#).

vemotherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

vemotherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.dummy_ram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.dummy_usb.bus_slave

Type: [PVBusSlave](#).

vemotherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

vemotherboard.flash0.map

Type: [PVBusMapper](#).

vemotherboard.flash0.mbs

Type: [PVBusSlave](#).

vemotherboard.flash0.rmbs

Type: [PVBusSlave](#).

vemotherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

vemotherboard.flash1.map

Type: [PVBusMapper](#).

vemotherboard.flash1.mbs

Type: [PVBusSlave](#).

vemotherboard.flash1.rmbs

Type: [PVBusSlave](#).

vemotherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

vemotherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

vemotherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

vemotherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

vemotherboard.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

vemotherboard.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

vemotherboard.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart0.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart1.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart2.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart3.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart4

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart4.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart4.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart4.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart4.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart4.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart4.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

vemotherboard.pl031_rtc.busslave

Type: [PVBusSlave](#).

vemotherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

vemotherboard.pl041_aaci.busslave

Type: [PVBusSlave](#).

vemotherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

vemotherboard.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

vemotherboard.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

vemotherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: `PL11x_CLCD`.

`vemotherboard.pl111_clcd.pl11x_clcd.busmaster`

Type: `PVBusMaster`.

`vemotherboard.pl111_clcd.pl11x_clcd.busslave`

Type: `PVBusSlave`.

`vemotherboard.pl111_clcd.pl11x_clcd.timer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

`vemotherboard.pl111_clcd.pl11x_clcd.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`vemotherboard.pl180_mci`

ARM PrimeCell Multimedia Card Interface (PL180).

Type: `PL180_MCI`.

`vemotherboard.pl180_mci.busslave`

Type: `PVBusSlave`.

`vemotherboard.ps2keyboard`

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked `PS2Data` signals which can be routed to a `PL050_KMI` component.

Type: `PS2Keyboard`.

`vemotherboard.ps2keyboard.ps2_clocktimer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()`

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

vemotherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.psram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

vemotherboard.smsc_91c111.SMSC_slave

Type: [PVBusSlave](#).

vemotherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

vemotherboard.sp805_wdog.busslave

Type: [PVBusSlave](#).

vemotherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

vemotherboard.sp810_sysctrl.busslave

Type: [PVBUSlave](#).

vemotherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_4

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

vemotherboard.timer_0_1.busslave

Type: [PVBusSlave](#).

vemotherboard.timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

vemotherboard.timer_2_3.busslave

Type: [PVBusSlave](#).

vemotherboard.timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

vemotherboard.timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

vemotherboard.ve_sysregs

Type: [VE_SysRegs](#).

vemotherboard.ve_sysregs.busslave

Type: [PVBusSlave](#).

vemotherboard.video_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.video_ram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

vemotherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

vemotherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

14.28 FVP_VE_Cortex-R8x4

List of instances in FVP_VE_Cortex-R8x4.

FVP_VE_Cortex-R8x4 instances

clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard

Cortex_R8x4 DaughterBoard for Versatile Express.

Type: [VEDaughterBoardCortex_R8x4](#).

daughterboard.core

ARM CORTEXR8 Cluster CT model.

Type: [Cluster_ARM_Cortex-R8](#).

daughterboard.core.acp_mapper

Type: [PVBusMapper](#).

daughterboard.core.cpu0

ARM CORTEXR8 CT model.

Type: [ARM_Cortex-R8](#).**daughterboard.core.cpu0.l1dcache**

PV Cache.

daughterboard.core.l2_flusher

Type: [AsyncCacheFlushUnit](#).

daughterboard.dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

daughterboard.dram.bus_slave

Type: [PVBUSSlave](#).

daughterboard.exclusive_monitor

Global exclusive monitor.

Type: [PVBUSExclusiveMonitor](#).

daughterboard.exclusive_monitor.bus_mapper

Type: [PVBUSMapper](#).

daughterboard.periph_clockdivider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

daughterboard.pl310_l2cc

ARM PrimeCell Level 2 Cache Controller (PL310).

Type: [PL310_L2CC](#).

daughterboard.veinterruptmapper

Interrupt Mapping peripheral (non-cascaded).

Type: [VEInterruptMapper](#).

vemotherboard

Model inspired by the ARM Versatile Express Motherboard for R profile.

Type: [VEMotherBoardR](#).

vemotherboard.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

vemotherboard.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.dummy_ram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.dummy_usb.bus_slave

Type: [PVBusSlave](#).

vemotherboard.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

vemotherboard.flash0.map

Type: [PVBusMapper](#).

vemotherboard.flash0.mbs

Type: [PVBusSlave](#).

vemotherboard.flash0.rmbs

Type: [PVBusSlave](#).

vemotherboard.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

vemotherboard.flash1.map

Type: [PVBusMapper](#).

vemotherboard.flash1.mbs

Type: [PVBusSlave](#).

vemotherboard.flash1.rmbs

Type: [PVBusSlave](#).

vemotherboard.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

vemotherboard.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

vemotherboard.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

vemotherboard.mmc

Generic Multimedia Card.

Type: [MMC](#).

vemotherboard.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart0.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart1.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart2.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart3.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl011_uart4

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

vemotherboard.pl011_uart4.busslave

Type: [PVBusSlave](#).

vemotherboard.pl011_uart4.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl011_uart4.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl011_uart4.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl011_uart4.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl011_uart4.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

vemotherboard.pl031_rtc.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

vemotherboard.pl041_aaci.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

vemotherboard.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

vemotherboard.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

vemotherboard.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

vemotherboard.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

vemotherboard.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

vemotherboard.pl180_mci.busslave

Type: [PVBUSSlave](#).

vemotherboard.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

vemotherboard.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

vemotherboard.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.psram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.smisc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

vemotherboard.smc_91c111.SMSC_slave

Type: [PVBUSSlave](#).

vemotherboard.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

vemotherboard.sp805_wdog.busslave

Type: [PVBUSSlave](#).

vemotherboard.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

vemotherboard.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

vemotherboard.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.terminal_4

Telnet terminal interface.

Type: [TelnetTerminal](#).

vemotherboard.timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

vemotherboard.timer_0_1.busslave

Type: [PVBusSlave](#).

vemotherboard.timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

vemotherboard.timer_2_3.busslave

Type: [PVBusSlave](#).

vemotherboard.timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

vemotherboard.ve_sysregs

Type: [VE_SysRegs](#).

vemotherboard.ve_sysregs.busslave

Type: [PVBusSlave](#).

vemotherboard.video_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

vemotherboard.video_ram.bus_slave

Type: [PVBusSlave](#).

vemotherboard.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

vemotherboard.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

vemotherboard.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

vemotherboard.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

vemotherboard.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

vemotherboard.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

vemotherboard.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

vemotherboard.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

15. MPS2 Platform FVPs

This chapter describes the MPS2 Platform FVPs contained in the FVP Standard Library.

For the MPS2 memory maps, see [MPS2 - memory maps](#) in the *Fast Models Reference Guide*.

- The MPS2 FVPs include AVH peripherals. These peripherals require the standard Python libraries, which are installed in the `<FVP_INSTALL_PATH>/python/lib/` directory. To set up the environment variables for these FVPs, including automatically configuring them to use the standard Python libraries, run the command:

Note

```
source $FVP_INSTALL_PATH/scripts/runtime.sh
```

Alternatively, manually set the `PYTHONHOME` environment variable to the location of the standard Python libraries.

- When running a project built using GCC and CMSIS on a Cortex®-M FVP with semihosting enabled, the semihosting implementation can overwrite the memory configuration.

To avoid this problem, configure the required memory values using model parameters, as described in this Knowledge Base Article [How do I Avoid Stack Pointer Corruption When Semihosting is Enabled on a GCC Toolchain?](#).

15.1 FVP_MPS2_AEMv8M

List of instances in FVP_MPS2_AEMv8M.

About FVP_MPS2_AEMv8M

The MPS2 platform includes many features that enable the creation of complex software. For those new to TrustZone® for Cortex®-M, however, it might be useful to run the model with some of these features disabled. Running the model with the following parameters disables the IDAU and the Security Gates:

```
--parameter idau.NUM_IDAU_REGION=0 \  
--parameter fvp_mps2.DISABLE_GATING=1
```

FVP_MPS2_AEMv8M instances

clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cpu0

fvp_mps2.GPIO2.busslave

Type: [PVBusSlave](#).

fvp_mps2.GPIO3

ARM PrimeCell General Purpose Input/Output.

Type: [CMSDK_GPIO](#).

fvp_mps2.GPIO3.busslave

Type: [PVBusSlave](#).

fvp_mps2.GPIO_connection_test

Type: [GPIO_Connection_Test](#).

fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: [GPIO_Port_Transfer](#).

fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: [GPIO1_Connection_Test](#).

fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.PSRAM.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.PSRAM_M7.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.UART0

ARM CMSDK UART Module.

Type: [CMSDK_UART](#).

fvp_mps2.UART0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.UART0.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.UART1

ARM CMSDK UART Module.

Type: [CMSDK_UART](#).

fvp_mps2.UART1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.UART1.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.UART2

ARM CMSDK UART Module.

Type: [CMSDK_UART](#).

fvp_mps2.UART2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.UART2.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: MPS2_VGA.

fvp_mps2.VGA_interface.pvbusslave

Type: PVBusSlave.

fvp_mps2.VGA_interface.pvbusslave1

Type: PVBusSlave.

fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper0

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper1

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper10

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper11

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper12

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper13

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper14

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper15

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper2

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper3

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper4

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper5

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper6

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper7

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper8
Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper9
Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion1
IoT Subsystem Peripheral Protection Controller.
Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.ahb_ppc_iotss_expansion1.bus_mapper0
Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion1.bus_mapper1
Type: [PVBusMapper](#).

Type: [PVBusMapper](#).

fvp_mps2.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: [CMSDK_SysCtrl](#).

fvp_mps2.cmsdk_sysctrl.busslave

Type: [PVBusSlave](#).

fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.cmsdk_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: [OrGate](#).

fvp_mps2.cpu_wait_or_gate_1

Or Gate.

Type: [OrGate](#).

fvp_mps2.dbgen_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma0.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma0.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma0.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

fvp_mps2.dma0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma0_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma0_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma0_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma0_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma1.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma1.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma1.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

fvp_mps2.dma1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

fvp_mps2.dma1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma1_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma1_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma1_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma1_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma1_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma1_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMACE](#).

fvp_mps2.dma2.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma2.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma2.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma2.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma2.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma2.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma2.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma2_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma2_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma2_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma2_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma3.busmaster0

Type: [PVBUSMaster](#).

fvp_mps2.dma3.busmaster1

Type: [PVBUSMaster](#).

fvp_mps2.dma3.busslave

Type: [PVBUSSlave](#).

fvp_mps2.dma3.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma3.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma3.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma3.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma3_idau_labeller.idau_busmaster

Type: [PVBUSMaster](#).

fvp_mps2.dma3_idau_labeller.pvbusmodifier

Type: [PVBUSMapper](#).

fvp_mps2.dma3_idau_labeller.remap_busmaster

Type: [PVBUSMaster](#).

fvp_mps2.dma3_securitymodifier
Type: SecurityModifier.

fvp_mps2.dma3_securitymodifier.pvbusmodifier
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_psram
Global exclusive monitor.
Type: PVBusExclusiveMonitor.

fvp_mps2.exclusive_monitor_psram.bus_mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_psram_iotss
Global exclusive monitor.
Type: PVBusExclusiveMonitor.

fvp_mps2.exclusive_monitor_psram_iotss.bus_mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss
Allow transactions to be routed arbitrarily.
Type: PVBusRouter.

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss.mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2
Allow transactions to be routed arbitrarily.
Type: PVBusRouter.

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2.mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_zbtsram1
Global exclusive monitor.
Type: PVBusExclusiveMonitor.

fvp_mps2.exclusive_monitor_zbtsram1.bus_mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_zbtsram2
Global exclusive monitor.
Type: PVBusExclusiveMonitor.

fvp_mps2.exclusive_monitor_zbtsram2.bus_mapper
Type: PVBusMapper.

fvp_mps2.exclusive_squasher
Squashes the exclusive attribute on bus transactions.
Type: PVBusExclusiveSquasher.

fvp_mps2.exclusive_squasher.bus_modifier
Type: PVBusMapper.

fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.fpga_sysctrl.pvbuslave

Type: [PVBUSlave](#).

fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

fvp_mps2.mem_switch_extra_psram_iotss.mapper

Type: [PVBUSMapper](#).

fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

fvp_mps2.mem_switch_extra_psram_mps2.mapper

Type: [PVBUSMapper](#).

fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram1.bus_mapper

Type: [PVBUSMapper](#).

fvp_mps2.mpc_iotss_ssram1.busslave

Type: [PVBUSSlave](#).

fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_audio

MPS2 Audio.

Type: [MPS2_Audio](#).

fvp_mps2.mps2_audio.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.mps2_cmsdk_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: MPS2_LCD.

fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mps2_mpc_iotss_ssram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_mpc_iotss_ssram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: `MPS2_SecureCtrl`.

fvp_mps2.mps2_secure_control_register_block.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.mps2_secure_control_register_block.busslave_ns_iot

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_ns_mps2

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_s_iot

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_s_mps2

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.idau_busmaster

Type: `PVBusMaster`.

fvp_mps2.mps2_timer0

ARM Timer Module.

Type: `CMSDK_Timer`.

fvp_mps2.mps2_timer0.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_timer0.clk_div

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.mps2_timer1

ARM Timer Module.

Type: `CMSDK_Timer`.

fvp_mps2.mps2_timer1.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_timer1.clk_div

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: MPS2_Visualisation.

fvp_mps2.niden_or_gate

Or Gate.

Type: OrGate.

fvp_mps2.nmi_or_gate

Or Gate.

Type: OrGate.

fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: PL022_SSP_MPS2.

fvp_mps2.pl022_ssp_mps2.busslave

Type: PVBUSSlave.

fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: PVBUSRouter.

fvp_mps2.platform_bus_switch.mapper

Type: PVBUSMapper.

fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: PVBUSRouter.

fvp_mps2.platform_switch_dma0.mapper

Type: PVBUSMapper.

fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: PVBUSRouter.

fvp_mps2.platform_switch_dma1.mapper

Type: PVBUSMapper.

fvp_mps2.signal_router

Signal router.

Type: SignalRouter.

fvp_mps2.smc_91c111
SMSC 91C111 ethernet controller.
Type: [SMSC_91C111](#).

fvp_mps2.smc_91c111.SMC slave
Type: [PVBusSlave](#).

fvp_mps2.spiden_or_gate
Or Gate.
Type: [OrGate](#).

fvp_mps2.spniden_or_gate
Or Gate.
Type: [OrGate](#).

fvp_mps2.sse200
SSE-200 subsystem.
Type: [SSE200](#).

fvp_mps2.sse200.acg_cpu0
IoT Subsystem Access Control Gate.
Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu0.bus_mapper
Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_cpu1
IoT Subsystem Access Control Gate.
Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu1.bus_mapper
Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram0
IoT Subsystem Access Control Gate.
Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram0.bus_mapper
Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram1
IoT Subsystem Access Control Gate.
Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram1.bus_mapper
Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram2
IoT Subsystem Access Control Gate.
Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram2.bus_mapper
Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper0

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper1

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper10

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper11

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper12

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper13

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper14

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper15

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper2

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper3

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper4

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper5

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper6

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper7

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper8

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper9
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1
IoT Subsystem Peripheral Protection Controller.
Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper0
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper1
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper10
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper11
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper12
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper13
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper14
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper15
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper2
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper3
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper4
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper5
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper6
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper7
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper8
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper9
Type: [PVBusMapper](#).

fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.sse200.cmsdk_dualtimer.busslave

Type: [PVBUSSlave](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cordio_ppu.busslave

Type: [PVBUSSlave](#).

fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu0core_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu0dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu1core_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu1dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.crypto_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.sse200.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.sse200.idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.internal_msniper_tcm.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIdentity](#).

fvp_mps2.sse200.iotss_cpuidentity.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram3.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

fvp_mps2.sse200.iotss_systemcontrol.busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.iotss_systemcontrol.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

fvp_mps2.sse200.iotss_systeminfo.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc.mapper

Type: [PVBUSMapper](#).

fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

fvp_mps2.sse200.mem_switch_ppu.mapper

Type: [PVBUSMapper](#).

fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu0.busslave

Type: [PVBUSSlave](#).

fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu1.busslave

Type: [PVBUSSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.bus_mapper

Type: [PVBUSMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.busslave

Type: [PVBUSSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.bus_mapper

Type: [PVBUSMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.busslave

Type: [PVBUSSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.nonsecure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram0_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram1_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram2_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram3_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.s32k_timer.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.s32k_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

fvp_mps2.sse200.secure_control_register_block.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.secure_control_register_block.busslave_ns_iot

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_ns_mps2

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_s_iot

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_s_mps2

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.secure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.signal_router

Signal router.

Type: [SignalRouter](#).

fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.sys_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.timer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.timer1

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.timer1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.ssram1.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.ssram2.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub0.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub1.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_i2c1.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_i2s.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_spi0.bus_slaveType: [PVBusSlave](#).**fvp_mps2.stub_spi2**

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).**fvp_mps2.stub_spi2.bus_slave**Type: [PVBusSlave](#).**fvp_mps2.svos_dualtimer**Type: [SVOS_DualTimer](#).**fvp_mps2.svos_dualtimer.busmaster0**Type: [PVBusMaster](#).**fvp_mps2.svos_dualtimer.busmaster1**Type: [PVBusMaster](#).**fvp_mps2.svos_dualtimer.busmaster2**Type: [PVBusMaster](#).**fvp_mps2.svos_dualtimer.busmaster3**Type: [PVBusMaster](#).**fvp_mps2.svos_dualtimer.busslave**Type: [PVBusSlave](#).**fvp_mps2.svos_dualtimer.svos_dualtimer0**

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).**fvp_mps2.svos_dualtimer.svos_dualtimer0.busslave**Type: [PVBusSlave](#).**fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0**

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer1.busslave

Type: PVBusSlave.

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer2.busslave

Type: PVBusSlave.

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer3.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_PSRAM_M7.mapper

Type: [PVBusMapper](#).

fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_svos_dualtimer.mapper

Type: [PVBusMapper](#).

fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).**fvp_mps2.telnetterminal1**

Telnet terminal interface.

Type: [TelnetTerminal](#).**fvp_mps2.telnetterminal2**

Telnet terminal interface.

Type: [TelnetTerminal](#).**fvp_mps2.touchscreen_interface**

MPS2 Touch Screen.

Type: [MPS2_TouchScreen](#).**fvp_mps2.touchscreen_interface.pvbuslave**Type: [PVBusSlave](#).**fvp_mps2.uart_overflows_or_gate**

Or Gate.

Type: [OrGate](#).**idau.bus_bridge**

Bridge incoming transactions to a PVDevice port.

Type: [PVBusBridge](#).

15.2 FVP_MPS2_Cortex-M0

List of instances in FVP_MPS2_Cortex-M0.

FVP_MPS2_Cortex-M0 instances

armcortexm0ct

ARM CORTEXM0 CT model.

Type: [ARM_Cortex-M0](#).**armcortexm0ct.acp_mapper**Type: [PVBusMapper](#).**armcortexm0ct.ext_bus**Type: [PVBusLogger](#).**armcortexm0ct.ext_bus.mapper**Type: [PVBusMapper](#).**armcortexm0ct.l2_flusher**Type: [AsyncCacheFlushUnit](#).

clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2

MPS2 DUT.

Type: FVP_MPS2.

fvp_mps2.GPIO0

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

fvp_mps2.GPIO0.busslave

Type: [PVBUSSlave](#).

fvp_mps2.GPIO1

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

fvp_mps2.GPIO1.busslave

Type: [PVBUSSlave](#).

fvp_mps2.GPIO2

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

Type: [PVBUSSlave](#).

fvp_mps2.GPIO3

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

fvp_mps2.GPIO3.busslave

Type: [PVBUSSlave](#).

fvp_mps2.GPIO_connection_test

Type: GPIO_Connection_Test.

fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: GPIO_Port_Transfer.

fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: `GPIO1_Connection_Test`.

fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.PSRAM.bus_slave

Type: `PVBusSlave`.

fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.PSRAM_M7.bus_slave

Type: `PVBusSlave`.

fvp_mps2.UART0

ARM CMSDK UART Module.

Type: `CMSDK_UART`.

fvp_mps2.UART0.clk_divider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.UART0.pvbusslave

Type: `PVBusSlave`.

fvp_mps2.UART1

ARM CMSDK UART Module.

Type: `CMSDK_UART`.

fvp_mps2.UART1.clk_divider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.UART1.pvbusslave

Type: `PVBusSlave`.

fvp_mps2.UART2

ARM CMSDK UART Module.

Type: `CMSDK_UART`.

fvp_mps2.UART2.clk_divider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.UART2.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: [MPS2_VGA](#).

fvp_mps2.VGA_interface.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.VGA_interface.pvbusslave1

Type: [PVBusSlave](#).

fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: [PL080_DMAC](#).

fvp_mps2.dma0.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma0.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma0.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma0_idau_labeller.idau_busmaster

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).**fvp_mps2.dma3.busmaster0**Type: [PVBusMaster](#).**fvp_mps2.dma3.busmaster1**Type: [PVBusMaster](#).**fvp_mps2.dma3.busslave**Type: [PVBusSlave](#).**fvp_mps2.dma3.timer**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).**fvp_mps2.dma3.timer.timer**

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).**fvp_mps2.dma3.timer.timer.thread**A [SchedulerThread](#) instance represents a co-routine thread in the simulation.Type: [SchedulerThread](#).**fvp_mps2.dma3.timer.timer.thread_event**

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).**fvp_mps2.dma3_idau_labeller**Type: [LabellerIdauSecurity](#).

fvp_mps2.dma3_idau_labeller.idau_busmaster
Type: [PVBusMaster](#).

fvp_mps2.dma3_idau_labeller.pvbusmodifier
Type: [PVBusMapper](#).

fvp_mps2.dma3_idau_labeller.remap_busmaster
Type: [PVBusMaster](#).

fvp_mps2.dma3_securitymodifier
Type: [SecurityModifier](#).

fvp_mps2.dma3_securitymodifier.pvbusmodifier
Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_psram
Global exclusive monitor.
Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_psram.bus_mapper
Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_psram_iotss
Global exclusive monitor.
Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_psram_iotss.bus_mapper
Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss
Allow transactions to be routed arbitrarily.
Type: [PVBusRouter](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss.mapper
Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2
Allow transactions to be routed arbitrarily.
Type: [PVBusRouter](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2.mapper
Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_zbtsram1
Global exclusive monitor.
Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_zbtsram1.bus_mapper
Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_zbtsram2
Global exclusive monitor.
Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_zbtsram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.fpga_sysctrl.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.mem_switch_extra_psram_iotss.mapper

Type: [PVBusMapper](#).

fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.mem_switch_extra_psram_mps2.mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_audio

MPS2 Audio.

Type: [MPS2_Audio](#).

fvp_mps2.mps2_audio.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.mps2_cmsdk_dualtimer.busslave

Type: PVBusSlave.

fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: PVBusExclusiveMonitor.

fvp_mps2.mps2_exclusive_monitor_zbtsram1.bus_mapper

Type: PVBusMapper.

fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: PVBusExclusiveMonitor.

fvp_mps2.mps2_exclusive_monitor_zbtsram2.bus_mapper

Type: PVBusMapper.

fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: MPS2_LCD.

fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: IoTSS_MemoryProtectionController.

fvp_mps2.mps2_mpc_iotss_ssram1.bus_mapper

Type: PVBusMapper.

fvp_mps2.mps2_mpc_iotss_ssram1.busslave

Type: PVBusSlave.

fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

fvp_mps2.mps2_secure_control_register_block.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_secure_control_register_block.busslave_ns_iot

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.busslave_ns_mps2

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.busslave_s_iot

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.busslave_s_mps2

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.mps2_timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.mps2_timer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.mps2_timer1

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.mps2_timer1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: MPS2_Visualisation.

fvp_mps2.niden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: PL022_SSP_MPS2.

fvp_mps2.pl022_ssp_mps2.busslave

Type: [PVBusSlave](#).

fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.platform_bus_switch.mapper

Type: [PVBusMapper](#).

fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.platform_switch_dma0.mapper

Type: [PVBusMapper](#).

fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.platform_switch_dma1.mapper

Type: [PVBusMapper](#).

fvp_mps2.signal_router

Signal router.

Type: [SignalRouter](#).

fvp_mps2.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

fvp_mps2.smc_91c111.SMC slave

Type: [PVBusSlave](#).

fvp_mps2.spiden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.spniden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200

SSE-200 subsystem.

Type: [SSE200](#).

fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper0

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper1

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper10

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper11

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper12

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper13

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper14

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper15

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper2

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper3

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper4

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper5

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper6
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper7
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper8
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper9
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1
IoT Subsystem Peripheral Protection Controller.
Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper0
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper1
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper10
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper11
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper12
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper13
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper14
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper15
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper2
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper3
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper4
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper5
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper6
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper7

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper8

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper9

Type: [PVBusMapper](#).

fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.sse200.cmsdk_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.cordio_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.cpu0core_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.cpu0core_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.cpu0dbg_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.cpu0dbg_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.cpu1core_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.cpu1core_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.cpu1dbg_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.cpu1dbg_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.crypto_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.crypto_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.dbg_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.dbg_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0**

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.sse200.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.sse200.idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.internal_msniper_tcm.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIdentity](#).

fvp_mps2.sse200.iotss_cpuidentity.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram3.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

fvp_mps2.sse200.iotss_systemcontrol.busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.iotss_systemcontrol.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

fvp_mps2.sse200.iotss_systeminfo.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_ppu.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.nonsecure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram0_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram1_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram2_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram3_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.s32k_timer.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.s32k_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

fvp_mps2.sse200.secure_control_register_block.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.secure_control_register_block.busslave_ns_iot

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_ns_mps2

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_s_iot

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_s_mps2

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.secure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.signal_router

Signal router.

Type: [SignalRouter](#).

fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.sys_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.timer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.timer1

ARM Timer Module.

Type: CMSDK_Timer.

fvp_mps2.sse200.timer1.busslave

Type: PVBusSlave.

fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

fvp_mps2.ssram1.bus_slave

Type: PVBusSlave.

fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: RAMDevice.

fvp_mps2.ssram2.bus_slave

Type: PVBusSlave.

fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: RAMDevice.

fvp_mps2.stub0.bus_slave

Type: PVBusSlave.

fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

fvp_mps2.stub1.bus_slave

Type: PVBusSlave.

fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

fvp_mps2.stub_i2c1.bus_slave

Type: PVBusSlave.

fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_i2s.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_spi0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_spi2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer

Type: [svos_DualTimer](#).

fvp_mps2.svos_dualtimer.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster2

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster3

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer1.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer2.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer3.busslave

Type: [PVBUSSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).**fvp_mps2.switch_PSRAM_M7.mapper**Type: [PVBusMapper](#).**fvp_mps2.switch_svos_dualtimer**

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).**fvp_mps2.switch_svos_dualtimer.mapper**Type: [PVBusMapper](#).**fvp_mps2.telnetterminal0**

Telnet terminal interface.

Type: [TelnetTerminal](#).**fvp_mps2.telnetterminal1**

Telnet terminal interface.

Type: [TelnetTerminal](#).**fvp_mps2.telnetterminal2**

Telnet terminal interface.

Type: [TelnetTerminal](#).**fvp_mps2.touchscreen_interface**

MPS2 Touch Screen.

Type: [MPS2_TouchScreen](#).**fvp_mps2.touchscreen_interface.pvbusslave**Type: [PVBusSlave](#).**fvp_mps2.uart_overflows_or_gate**

Or Gate.

Type: [OrGate](#).

15.3 FVP_MPS2_Cortex-M0plus

List of instances in FVP_MPS2_Cortex-M0plus.

FVP_MPS2_Cortex-M0plus instances

armcortexm0plusct

ARM CORTEXM0+ CT model.

Type: [ARM_Cortex-M0+](#).**armcortexm0plusct.acp_mapper**Type: [PVBusMapper](#).

armcortexm0plusct.ext_bus

Type: [PVBusLogger](#).

armcortexm0plusct.ext_bus.mapper

Type: [PVBusMapper](#).

armcortexm0plusct.l2_flusher

Type: [AsyncCacheFlushUnit](#).

clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2

MPS2 DUT.

Type: [FVP_MPS2](#).

fvp_mps2.GPIO0

ARM PrimeCell General Purpose Input/Output.

Type: [CMSDK_GPIO](#).

fvp_mps2.GPIO0.busslave

Type: [PVBusSlave](#).

fvp_mps2.GPIO1

ARM PrimeCell General Purpose Input/Output.

Type: [CMSDK_GPIO](#).

fvp_mps2.GPIO1.busslave

Type: [PVBusSlave](#).

fvp_mps2.GPIO2

ARM PrimeCell General Purpose Input/Output.

Type: [CMSDK_GPIO](#).

fvp_mps2.GPIO2.busslave

Type: [PVBusSlave](#).

fvp_mps2.GPIO3

ARM PrimeCell General Purpose Input/Output.

Type: [CMSDK_GPIO](#).

fvp_mps2.GPIO3.busslave

Type: [PVBusSlave](#).

fvp_mps2.GPIO_connection_test

Type: [GPIO_Connection_Test](#).

fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: [GPIO_Port_Transfer](#).

fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: [GPIO1_Connection_Test](#).

fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.PSRAM.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.PSRAM_M7.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.UART0

ARM CMSDK UART Module.

Type: [CMSDK_UART](#).

fvp_mps2.UART0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.UART0.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.UART1

ARM CMSDK UART Module.

Type: [CMSDK_UART](#).

fvp_mps2.UART1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.UART1.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.UART2

ARM CMSDK UART Module.

Type: CMSDK_UART.

fvp_mps2.UART2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.UART2.pvbuslave

Type: PVBusSlave.

fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: MPS2_VGA.

fvp_mps2.VGA_interface.pvbuslave

Type: PVBusSlave.

fvp_mps2.VGA_interface.pvbuslave1

Type: PVBusSlave.

fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper0

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper1

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper10

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper11

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper12

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper13

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper14

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper15

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper2

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper3

Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper4

Type: [PVBusMapper](#).

Type: [PVBusMapper](#).

fvp_mps2.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: [CMSDK_SysCtrl](#).

fvp_mps2.cmsdk_sysctrl.busslave

Type: [PVBusSlave](#).

fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.cmsdk_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: [OrGate](#).

fvp_mps2.cpu_wait_or_gate_1

Or Gate.

Type: [OrGate](#).

fvp_mps2.dbgen_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMACH](#).

fvp_mps2.dma0.busmaster0

Type: [PVBUSMaster](#).

fvp_mps2.dma0.busmaster1

Type: [PVBUSMaster](#).

fvp_mps2.dma0.busslave

Type: [PVBUSSlave](#).

fvp_mps2.dma0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma0_idau_labeller.idau_busmaster

Type: [PVBUSMaster](#).

fvp_mps2.dma0_idau_labeller.pvbusmodifier

Type: [PVBUSMapper](#).

fvp_mps2.dma0_idau_labeller.remap_busmaster

Type: [PVBUSMaster](#).

fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma0_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma1.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma1.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma1.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma1.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma1.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma1.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma1.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma1_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma1_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma1_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma1_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma1_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma1_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma2.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma2.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma2.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma2.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma2.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma2.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma2.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma2_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma2_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma2_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma2_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma3.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma3.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma3.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma3.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma3.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma3.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma3_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma3_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma3_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma3_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma3_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_psram

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_psram.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_psram_iotss

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_psram_iotss.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss.mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2.mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_zbtsram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_zbtsram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.fpga_sysctrl.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.mem_switch_extra_psram_iotss.mapper

Type: [PVBusMapper](#).

fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.mem_switch_extra_psram_mps2.mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_audio

MPS2 Audio.

Type: `MPS2_Audio`.

fvp_mps2.mps2_audio.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: `CMSDK_DualTimer`.

fvp_mps2.mps2_cmsdk_dualtimer.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

fvp_mps2.mps2_exclusive_monitor_zbtsram1.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

fvp_mps2.mps2_exclusive_monitor_zbtsram2.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: `MPS2_LCD`.

fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

fvp_mps2.mps2_mpc_iotss_ssram1.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.mps2_mpc_iotss_ssram1.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: `MPS2_SecureCtrl`.

fvp_mps2.mps2_secure_control_register_block.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.mps2_secure_control_register_block.busslave_ns_iot

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_ns_mps2

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_s_iot

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_s_mps2

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.idau_busmaster

Type: `PVBusMaster`.

fvp_mps2.mps2_timer0

ARM Timer Module.

Type: `CMSDK_Timer`.

fvp_mps2.mps2_timer0.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_timer0.clk_div

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.mps2_timer1

ARM Timer Module.

Type: CMSDK_Timer.

fvp_mps2.mps2_timer1.busslave

Type: PVBusSlave.

fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: MPS2_Visualisation.

fvp_mps2.niden_or_gate

Or Gate.

Type: OrGate.

fvp_mps2.nmi_or_gate

Or Gate.

Type: OrGate.

fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: PL022_SSP_MPS2.

fvp_mps2.pl022_ssp_mps2.busslave

Type: PVBusSlave.

fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

fvp_mps2.platform_bus_switch.mapper

Type: PVBusMapper.

fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

fvp_mps2.platform_switch_dma0.mapper

Type: [PVBusMapper](#).

fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.platform_switch_dma1.mapper

Type: [PVBusMapper](#).

fvp_mps2.signal_router

Signal router.

Type: [SignalRouter](#).

fvp_mps2.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

fvp_mps2.smsc_91c111.SMSC_slave

Type: [PVBusSlave](#).

fvp_mps2.spiden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.spniden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200

SSE-200 subsystem.

Type: [SSE200](#).

fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

fvp_mps2.sse200.acg_sram1.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

fvp_mps2.sse200.acg_sram2.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

fvp_mps2.sse200.acg_sram3.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper0

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper1

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper10

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper11

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper12

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper13

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper14

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper15

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper2

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper3

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper4
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper5
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper6
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper7

Type: [PVBusMapper](#).

fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.sse200.cmsdk_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.cordio_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.cpu0core_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.cpu0dbg_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.cpu1core_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.cpu1dbg_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.crypto_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.dbg_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.sse200.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.sse200.idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.internal_msniper_tcm.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: `IoTSS_CPUIdentity`.

fvp_mps2.sse200.iotss_cpuidentity.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.sse200.iotss_internal_sram0.bus_slave

Type: `PVBusSlave`.

fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.sse200.iotss_internal_sram1.bus_slave

Type: `PVBusSlave`.

fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.sse200.iotss_internal_sram2.bus_slave

Type: `PVBusSlave`.

fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.sse200.iotss_internal_sram3.bus_slave

Type: `PVBusSlave`.

fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: `IoTSS_SystemControl`.

fvp_mps2.sse200.iotss_systemcontrol.busmaster

Type: `PVBusMaster`.

fvp_mps2.sse200.iotss_systemcontrol.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: `IoTSS_SystemInfo`.

fvp_mps2.sse200.iotss_systeminfo.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_ppu.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.nonsecure_watchdog.busslaveType: [PVBUSSlave](#).**fvp_mps2.sse200.ram0_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.ram0_ppu.busslave**Type: [PVBUSSlave](#).**fvp_mps2.sse200.ram1_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.ram1_ppu.busslave**Type: [PVBUSSlave](#).**fvp_mps2.sse200.ram2_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.ram2_ppu.busslave**Type: [PVBUSSlave](#).**fvp_mps2.sse200.ram3_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.ram3_ppu.busslave**Type: [PVBUSSlave](#).**fvp_mps2.sse200.s32k_timer**

ARM Timer Module.

Type: [CMSDK_Timer](#).**fvp_mps2.sse200.s32k_timer.busslave**Type: [PVBUSSlave](#).**fvp_mps2.sse200.s32k_timer.clk_div**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**fvp_mps2.sse200.s32k_timer.counter**

Internal component used by SP804 Timer module.

Type: [CounterModule](#).**fvp_mps2.sse200.s32k_watchdog**

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.s32k_watchdog.busslaveType: [PVBusSlave](#).**fvp_mps2.sse200.secure_control_register_block**

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).**fvp_mps2.sse200.secure_control_register_block.bus_mapper**Type: [PVBusMapper](#).**fvp_mps2.sse200.secure_control_register_block.busslave_ns_iot**Type: [PVBusSlave](#).**fvp_mps2.sse200.secure_control_register_block.busslave_ns_mps2**Type: [PVBusSlave](#).**fvp_mps2.sse200.secure_control_register_block.busslave_s_iot**Type: [PVBusSlave](#).**fvp_mps2.sse200.secure_control_register_block.busslave_s_mps2**Type: [PVBusSlave](#).**fvp_mps2.sse200.secure_control_register_block.idau_busmaster**Type: [PVBusMaster](#).**fvp_mps2.sse200.secure_watchdog**

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).**fvp_mps2.sse200.secure_watchdog.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.signal_router**

Signal router.

Type: [SignalRouter](#).**fvp_mps2.sse200.sys_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.sys_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.timer0**

ARM Timer Module.

Type: [CMSDK_Timer](#).**fvp_mps2.sse200.timer0.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.timer0.clk_div**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.sse200.timer1

ARM Timer Module.

Type: CMSDK_Timer.

fvp_mps2.sse200.timer1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.ssram1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.ssram2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_i2c1
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

fvp_mps2.stub_i2c1.bus_slave
Type: [PVBusSlave](#).

fvp_mps2.stub_i2s
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

fvp_mps2.stub_i2s.bus_slave
Type: [PVBusSlave](#).

fvp_mps2.stub_spi0
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

fvp_mps2.stub_spi0.bus_slave
Type: [PVBusSlave](#).

fvp_mps2.stub_spi2
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

fvp_mps2.stub_spi2.bus_slave
Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer
Type: [svos_DualTimer](#).

fvp_mps2.svos_dualtimer.busmaster0
Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster1
Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster2
Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster3
Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busslave
Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0
ARM Dual-Timer Module.
Type: [CMSDK_DualTimer](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.busslave
Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer1.busslave

Type: [PVBUSSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer2.busslave

Type: PVBusSlave.

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer3.busslave

Type: PVBusSlave.

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

fvp_mps2.switch_PSRAM_M7.mapper

Type: PVBusMapper.

fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

fvp_mps2.switch_svos_dualtimer.mapper

Type: PVBusMapper.

fvp_mps2.telnetterminal0

Telnet terminal interface.

fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: TelnetTerminal.

fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: TelnetTerminal.

fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: MPS2_TouchScreen.

fvp_mps2.touchscreen_interface.pvbusslave

Type: PVBusSlave.

fvp_mps2.uart_overflows_or_gate

Or Gate.

Type: OrGate.

15.4 FVP_MPS2_Cortex-M23

List of instances in FVP_MPS2_Cortex-M23.

About FVP_MPS2_Cortex-M23

The MPS2 platform includes many features that enable the creation of complex software. For those new to TrustZone® for Cortex®-M, however, it might be useful to run the model with some of

these features disabled. Running the model with the following parameters disables the IDAU and the Security Gates:

```
--parameter idau.NUM IDAU_REGION=0 \
--parameter fvp_mps2.DISABLE_GATING=1
```

FVP_MPS2_Cortex-M23 instances

clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

core0_bus_gasket

STLBusGasket allows a debugger or emulated T32 code to force the results of system-register reads by writing an address to the ADDR register then 32-bit values to the VALUE register, which are placed in a fifo associated with that address. A PVBUS transaction into pvbus_in goes unchanged to pvbus_out, unless its address matches that associated with a non-empty fifo, in which case: writes are ignored, non-word reads abort, and word reads take values from that fifo.

Type: [STLBusGasket](#).

core0_bus_gasket.busmapper

Type: [PVBUSMapper](#).

cpu0

ARM CORTEXM23 CT model.

fvp_mps2.dma0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

fvp_mps2.dma0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

Type: PVBusMapper.

fvp_mps2.exclusive_monitor_zbtsram1
Global exclusive monitor.
Type: PVBusExclusiveMonitor.

fvp_mps2.exclusive_monitor_zbtsram1.bus_mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_zbtsram2
Global exclusive monitor.
Type: PVBusExclusiveMonitor.

fvp_mps2.exclusive_monitor_zbtsram2.bus_mapper
Type: PVBusMapper.

fvp_mps2.exclusive_squasher
Squashes the exclusive attribute on bus transactions.
Type: PVBusExclusiveSquasher.

fvp_mps2.exclusive_squasher.bus_modifier
Type: PVBusMapper.

fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.fpga_sysctrl.pvbuslave

Type: [PVBUSlave](#).

fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

fvp_mps2.mem_switch_extra_psram_iotss.mapper

Type: [PVBUSMapper](#).

fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

fvp_mps2.mem_switch_extra_psram_mps2.mapper

Type: [PVBUSMapper](#).

fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram1.bus_mapper

Type: [PVBUSMapper](#).

fvp_mps2.mpc_iotss_ssram1.busslave

Type: [PVBUSSlave](#).

fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_audio

MPS2 Audio.

Type: [MPS2_Audio](#).

fvp_mps2.mps2_audio.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.mps2_cmsdk_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: MPS2_LCD.

fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: IoTSS_MemoryProtectionController.

fvp_mps2.mps2_mpc_iotss_ssram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_mpc_iotss_ssram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: `MPS2_SecureCtrl`.

fvp_mps2.mps2_secure_control_register_block.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.mps2_secure_control_register_block.busslave_ns_iot

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_ns_mps2

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_s_iot

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_s_mps2

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.idau_busmaster

Type: `PVBusMaster`.

fvp_mps2.mps2_timer0

ARM Timer Module.

Type: `CMSDK_Timer`.

fvp_mps2.mps2_timer0.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_timer0.clk_div

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.mps2_timer1

ARM Timer Module.

Type: `CMSDK_Timer`.

fvp_mps2.mps2_timer1.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_timer1.clk_div

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: MPS2_Visualisation.

fvp_mps2.niden_or_gate

Or Gate.

Type: OrGate.

fvp_mps2.nmi_or_gate

Or Gate.

Type: OrGate.

fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: PL022_SSP_MPS2.

fvp_mps2.pl022_ssp_mps2.busslave

Type: PVBusSlave.

fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

fvp_mps2.platform_bus_switch.mapper

Type: PVBusMapper.

fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

fvp_mps2.platform_switch_dma0.mapper

Type: PVBusMapper.

fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

fvp_mps2.platform_switch_dma1.mapper

Type: PVBusMapper.

fvp_mps2.signal_router

Signal router.

Type: SignalRouter.

fvp_mps2.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

fvp_mps2.smc_91c111.SMC_slave

Type: [PVBusSlave](#).

fvp_mps2.spiden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.spniden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200

SSE-200 subsystem.

Type: [SSE200](#).

fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper0

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper1

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper10

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper11

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper12

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper13

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper14

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper15

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper2

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper3

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper4

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper5

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper6

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper7

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper8

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper9
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1
IoT Subsystem Peripheral Protection Controller.
Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper0
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper1
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper10
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper11
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper12
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper13
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper14
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper15
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper2
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper3
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper4
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper5
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper6
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper7
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper8
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper9
Type: [PVBusMapper](#).

fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.sse200.cmsdk_dualtimer.busslave

Type: [PVBUSSlave](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cordio_ppu.busslave

Type: [PVBUSSlave](#).

fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu0core_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu0dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu1core_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu1dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.crypto_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.sse200.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.sse200.idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.internal_msniper_tcm.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIdentity](#).

fvp_mps2.sse200.iotss_cpuidentity.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram3.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

fvp_mps2.sse200.iotss_systemcontrol.busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.iotss_systemcontrol.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

fvp_mps2.sse200.iotss_systeminfo.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_ppu.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.nonsecure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram0_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram1_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram2_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram3_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.s32k_timer.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.s32k_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

fvp_mps2.sse200.secure_control_register_block.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.secure_control_register_block.busslave_ns_iot

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_ns_mps2

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_s_iot

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_s_mps2

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.secure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.signal_router

Signal router.

Type: [SignalRouter](#).

fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.sys_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.timer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.timer1

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.timer1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.ssram1.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.ssram2.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub0.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub1.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_i2c1.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_i2s.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_spi0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_spi2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer

Type: [SVOS_DualTimer](#).

fvp_mps2.svos_dualtimer.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster2

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster3

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer1.busslave

Type: PVBusSlave.

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer2.busslave

Type: PVBusSlave.

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer3.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_PSRAM_M7.mapper

Type: [PVBusMapper](#).

fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_svos_dualtimer.mapper

Type: [PVBusMapper](#).

fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).**fvp_mps2.telnetterminal1**

Telnet terminal interface.

Type: [TelnetTerminal](#).**fvp_mps2.telnetterminal2**

Telnet terminal interface.

Type: [TelnetTerminal](#).**fvp_mps2.touchscreen_interface**

MPS2 Touch Screen.

Type: [MPS2_TouchScreen](#).**fvp_mps2.touchscreen_interface.pvbuslave**Type: [PVBusSlave](#).**fvp_mps2.uart_overflows_or_gate**

Or Gate.

Type: [OrGate](#).**idau.bus_bridge**

Bridge incoming transactions to a PVDevice port.

Type: [PVBusBridge](#).

15.5 FVP_MPS2_Cortex-M3

List of instances in FVP_MPS2_Cortex-M3.

FVP_MPS2_Cortex-M3 instances

armcortexm3ct

ARM CORTEXM3 CT model.

Type: [ARM_Cortex-M3](#).**armcortexm3ct.acp_mapper**Type: [PVBusMapper](#).**armcortexm3ct.ext_bus**Type: [PVBusLogger](#).**armcortexm3ct.ext_bus.mapper**Type: [PVBusMapper](#).**armcortexm3ct.l2_flusher**Type: [AsyncCacheFlushUnit](#).

clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2

MPS2 DUT.

Type: FVP_MPS2.

fvp_mps2.GPIO0

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

fvp_mps2.GPIO0.busslave

Type: [PVBUSSlave](#).

fvp_mps2.GPIO1

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

fvp_mps2.GPIO1.busslave

Type: [PVBUSSlave](#).

fvp_mps2.GPIO2

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

fvp_mps2.GPIO2.busslave

Type: [PVBUSSlave](#).

fvp_mps2.GPIO3

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

fvp_mps2.GPIO3.busslave

Type: [PVBUSSlave](#).

fvp_mps2.GPIO_connection_test

Type: GPIO_Connection_Test.

fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: GPIO_Port_Transfer.

fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: `GPIO1_Connection_Test`.

fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.PSRAM.bus_slave

Type: `PVBusSlave`.

fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.PSRAM_M7.bus_slave

Type: `PVBusSlave`.

fvp_mps2.UART0

ARM CMSDK UART Module.

Type: `CMSDK_UART`.

fvp_mps2.UART0.clk_divider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.UART0.pvbusslave

Type: `PVBusSlave`.

fvp_mps2.UART1

ARM CMSDK UART Module.

Type: `CMSDK_UART`.

fvp_mps2.UART1.clk_divider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.UART1.pvbusslave

Type: `PVBusSlave`.

fvp_mps2.UART2

ARM CMSDK UART Module.

Type: `CMSDK_UART`.

fvp_mps2.UART2.clk_divider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.UART2.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: [MPS2_VGA](#).

fvp_mps2.VGA_interface.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.VGA_interface.pvbusslave1

Type: [PVBusSlave](#).

fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

fvp_mps2.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: [CMSDK_SysCtrl](#).

fvp_mps2.cmsdk_sysctrl.busslave

Type: [PVBusSlave](#).

fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.cmsdk_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: [OrGate](#).

fvp_mps2.cpu_wait_or_gate_1

Or Gate.

Type: [OrGate](#).

fvp_mps2.dbgen_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma0.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma0.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma0.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma0_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma0_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma0_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma0_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma1.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma1.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma1.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma1.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma1.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma1.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma1.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma1_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma1_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma1_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma1_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma1_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma1_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma2.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma2.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma2.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma2.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma2.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma2.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma2.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma2_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma2_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma2_idau_labeller.remap_busmasterType: [PVBusMaster](#).**fvp_mps2.dma2_securitymodifier**Type: [SecurityModifier](#).**fvp_mps2.dma2_securitymodifier.pvbusmodifier**Type: [PVBusMapper](#).**fvp_mps2.dma3**

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).**fvp_mps2.dma3.busmaster0**Type: [PVBusMaster](#).**fvp_mps2.dma3.busmaster1**Type: [PVBusMaster](#).**fvp_mps2.dma3.busslave**Type: [PVBusSlave](#).**fvp_mps2.dma3.timer**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).**fvp_mps2.dma3.timer.timer**

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [PVBusMapper](#).

fvp_mps2.dma3_idau_labeller.remap_busmaster
Type: [PVBusMaster](#).

fvp_mps2.dma3_securitymodifier
Type: [SecurityModifier](#).

fvp_mps2.dma3_securitymodifier.pvbusmodifier
Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_psram
Global exclusive monitor.
Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_psram.bus_mapper
Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_psram_iotss
Global exclusive monitor.
Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_psram_iotss.bus_mapper
Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss
Allow transactions to be routed arbitrarily.
Type: [PVBusRouter](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss.mapper
Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2
Allow transactions to be routed arbitrarily.
Type: [PVBusRouter](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2.mapper
Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_zbtsram1
Global exclusive monitor.
Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_zbtsram1.bus_mapper
Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_zbtsram2
Global exclusive monitor.
Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_zbtsram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.fpga_sysctrl.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.mem_switch_extra_psram_iotss.mapper

Type: [PVBusMapper](#).

fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.mem_switch_extra_psram_mps2.mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_audio

MPS2 Audio.

Type: [MPS2_Audio](#).

fvp_mps2.mps2_audio.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.mps2_cmsdk_dualtimer.busslave

Type: PVBusSlave.

fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: PVBusExclusiveMonitor.

fvp_mps2.mps2_exclusive_monitor_zbtsram1.bus_mapper

Type: PVBusMapper.

fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: PVBusExclusiveMonitor.

fvp_mps2.mps2_exclusive_monitor_zbtsram2.bus_mapper

Type: PVBusMapper.

fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: MPS2_LCD.

fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: IoTSS_MemoryProtectionController.

fvp_mps2.mps2_mpc_iotss_ssram1.bus_mapper

Type: PVBusMapper.

fvp_mps2.mps2_mpc_iotss_ssram1.busslave

Type: PVBusSlave.

fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

fvp_mps2.mps2_secure_control_register_block.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_secure_control_register_block.busslave_ns_iot

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.busslave_ns_mps2

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.busslave_s_iot

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.busslave_s_mps2

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.mps2_timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.mps2_timer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.mps2_timer1

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.mps2_timer1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: MPS2_Visualisation.

fvp_mps2.niden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: PL022_SSP_MPS2.

fvp_mps2.pl022_ssp_mps2.busslave

Type: [PVBusSlave](#).

fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.platform_bus_switch.mapper

Type: [PVBusMapper](#).

fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.platform_switch_dma0.mapper

Type: [PVBusMapper](#).

fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.platform_switch_dma1.mapper

Type: [PVBusMapper](#).

fvp_mps2.signal_router

Signal router.

Type: [SignalRouter](#).

fvp_mps2.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

fvp_mps2.smc_91c111.SMC slave

Type: [PVBusSlave](#).

fvp_mps2.spiden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.spniden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200

SSE-200 subsystem.

Type: [SSE200](#).

fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper0

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper1

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper10

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper11

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper12

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper13

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper14

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper15

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper2

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper3

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper4

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper5

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper6
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper7
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper8
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper9
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1
IoT Subsystem Peripheral Protection Controller.
Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper0
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper1
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper10
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper11
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper12
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper13
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper14
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper15
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper2
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper3
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper4
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper9

Type: [PVBusMapper](#).

fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.sse200.cmsdk_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.cordio_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.cpu0core_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.cpu0core_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.cpu0dbg_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.cpu0dbg_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.cpu1core_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.cpu1core_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.cpu1dbg_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.cpu1dbg_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.crypto_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.crypto_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.dbg_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.dbg_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0**

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.sse200.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.sse200.idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.internal_msniper_tcm.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIdentity](#).

fvp_mps2.sse200.iotss_cpuidentity.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram3.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

fvp_mps2.sse200.iotss_systemcontrol.busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.iotss_systemcontrol.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

fvp_mps2.sse200.iotss_systeminfo.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_ppu.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.nonsecure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram0_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram1_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram2_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram3_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.s32k_timer.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.s32k_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

fvp_mps2.sse200.secure_control_register_block.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.secure_control_register_block.busslave_ns_iot

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_ns_mps2

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_s_iot

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_s_mps2

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.secure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.signal_router

Signal router.

Type: [SignalRouter](#).

fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.sys_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.timer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.timer1

ARM Timer Module.

Type: CMSDK_Timer.

fvp_mps2.sse200.timer1.busslave

Type: PVBusSlave.

fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

fvp_mps2.ssram1.bus_slave

Type: PVBusSlave.

fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: RAMDevice.

fvp_mps2.ssram2.bus_slave

Type: PVBusSlave.

fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: RAMDevice.

fvp_mps2.stub0.bus_slave

Type: PVBusSlave.

fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

fvp_mps2.stub1.bus_slave

Type: PVBusSlave.

fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

fvp_mps2.stub_i2c1.bus_slave

Type: PVBusSlave.

fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_i2s.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_spi0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_spi2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer

Type: [svos_DualTimer](#).

fvp_mps2.svos_dualtimer.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster2

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster3

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer1.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer2.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer3.busslave

Type: [PVBUSSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_PSRAM_M7.mapper

Type: [PVBusMapper](#).

fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_svos_dualtimer.mapper

Type: [PVBusMapper](#).

fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).

fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: [TelnetTerminal](#).

fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: [TelnetTerminal](#).

fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: [MPS2_TouchScreen](#).

fvp_mps2.touchscreen_interface.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.uart_overflows_or_gate

Or Gate.

Type: [OrGate](#).

15.6 FVP_MPS2_Cortex-M33

List of instances in FVP_MPS2_Cortex-M33.

About FVP_MPS2_Cortex-M33

The MPS2 platform includes many features that enable the creation of complex software. For those new to TrustZone® for Cortex®-M, however, it might be useful to run the model with some of these features disabled. Running the model with the following parameters disables the IDAU and the Security Gates:

```
--parameter idau.NUM_IDAU_REGION=0 \
--parameter fvp_mps2.DISABLE_GATING=1
```

FVP_MPS2_Cortex-M33 instances

clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cpu0

ARM CORTEXM33 CT model.

Type: PVBusSlave.

fvp_mps2.GPIO3

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

fvp_mps2.GPIO3.busslave

Type: PVBusSlave.

fvp_mps2.GPIO_connection_test

Type: GPIO_Connection_Test.

fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: GPIO_Port_Transfer.

fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: GPIO1_Connection_Test.

fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: RAMDevice.

fvp_mps2.PSRAM.bus_slave

Type: PVBusSlave.

fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: RAMDevice.

fvp_mps2.PSRAM_M7.bus_slave

Type: PVBusSlave.

fvp_mps2.UART0

ARM CMSDK UART Module.

Type: CMSDK_UART.

fvp_mps2.UART0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.UART0.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.UART1

ARM CMSDK UART Module.

Type: [CMSDK_UART](#).

fvp_mps2.UART1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.dma0.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma0.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma0_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma0_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma0_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma0_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma1.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma1.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma1.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

fvp_mps2.dma1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

fvp_mps2.dma1.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

fvp_mps2.dma1.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

fvp_mps2.dma1_idau_labeller

Type: `LabellerIdauSecurity`.

fvp_mps2.dma1_idau_labeller.idau_busmaster

Type: `PVBusMaster`.

fvp_mps2.dma1_securitymodifier

Type: `SecurityModifier`.

fvp_mps2.dma1_securitymodifier.pvbusmodifier

Type: `PVBusMapper`.

fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: `PL080_DMACE`.

fvp_mps2.dma2.busmaster0

Type: `PVBusMaster`.

fvp_mps2.dma2.busmaster1

Type: `PVBusMaster`.

fvp_mps2.dma2.busslave

Type: `PVBusSlave`.

fvp_mps2.dma2.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

fvp_mps2.dma2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

fvp_mps2.dma2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

Type: [PVBusSlave](#).

fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: MPS2_LCD.

fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mps2_mpc_iotss_ssram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_mpc_iotss_ssram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: MPS2_SecureCtrl.

fvp_mps2.mps2_secure_control_register_block.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_secure_control_register_block.busslave_ns_iod

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.busslave_ns_mps2

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.busslave_s_iod

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.busslave_s_mps2

Type: [PVBUSSlave](#).

fvp_mps2.mps2_secure_control_register_block.idau_busmaster

Type: [PVBUSMaster](#).

fvp_mps2.mps2_timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.mps2_timer0.busslave

Type: [PVBUSSlave](#).

fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.mps2_timer1

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.mps2_timer1.busslave

Type: [PVBUSSlave](#).

fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: [MPS2_Visualisation](#).

fvp_mps2.niden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: `PL022_SSP_MPS2`.

fvp_mps2.pl022_ssp_mps2.busslave

Type: `PVBusSlave`.

fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

fvp_mps2.platform_bus_switch.mapper

Type: `PVBusMapper`.

fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

fvp_mps2.platform_switch_dma0.mapper

Type: `PVBusMapper`.

fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

fvp_mps2.platform_switch_dma1.mapper

Type: `PVBusMapper`.

fvp_mps2.signal_router

Signal router.

Type: `SignalRouter`.

fvp_mps2.smc_91c111

SMSC 91C111 ethernet controller.

Type: `SMSC_91C111`.

fvp_mps2.smc_91c111.SMSC_slave

Type: `PVBusSlave`.

fvp_mps2.spiden_or_gate

Or Gate.

Type: `OrGate`.

fvp_mps2.spniden_or_gate

Or Gate.

Type: `OrGate`.

fvp_mps2.sse200

SSE-200 subsystem.

Type: SSE200.

fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

fvp_mps2.sse200.acg_cpu0.bus_mapper

Type: PVBusMapper.

fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

fvp_mps2.sse200.acg_cpu1.bus_mapper

Type: PVBusMapper.

fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

fvp_mps2.sse200.acg_sram0.bus_mapper

Type: PVBusMapper.

fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

fvp_mps2.sse200.acg_sram1.bus_mapper

Type: PVBusMapper.

fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

fvp_mps2.sse200.acg_sram2.bus_mapper

Type: PVBusMapper.

fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

fvp_mps2.sse200.acg_sram3.bus_mapper

Type: PVBusMapper.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper0

Type: PVBusMapper.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper1
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper10
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper11
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper12
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper13
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper14
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper15
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper2
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper3
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper4
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper5
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper6
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper7
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper8
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper9
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1
IoT Subsystem Peripheral Protection Controller.
Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper0
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper1
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper10

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper11

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper12

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper13

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper14

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper15

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper2

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper3

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper4

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper5

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper6

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper7

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper8

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper9

Type: [PVBusMapper](#).

fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.sse200.cmsdk_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cordio_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu0core_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu0dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: `PPUv0`.

fvp_mps2.sse200.cpu1core_ppu.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: `PPUv0`.

fvp_mps2.sse200.cpu1dbg_ppu.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: `PPUv0`.

fvp_mps2.sse200.crypto_ppu.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: `PPUv0`.

fvp_mps2.sse200.dbg_ppu.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.sse200.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.sse200.idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.internal_msniper_tcm.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIentity](#).

fvp_mps2.sse200.iotss_cpuidentity.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram3.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

fvp_mps2.sse200.iotss_systemcontrol.busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.iotss_systemcontrol.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

fvp_mps2.sse200.iotss_systeminfo.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_ppu.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: `IoTSS_MessageHandlingUnit`.

fvp_mps2.sse200.mhu0.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: `IoTSS_MessageHandlingUnit`.

fvp_mps2.sse200.mhu1.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

fvp_mps2.sse200.mpc_iotss_internal_sram0.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.mpc_iotss_internal_sram0.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

fvp_mps2.sse200.mpc_iotss_internal_sram1.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.mpc_iotss_internal_sram1.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

fvp_mps2.sse200.mpc_iotss_internal_sram2.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.mpc_iotss_internal_sram2.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.nonsecure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram0_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram1_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram2_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram3_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: CMSDK_Timer.

fvp_mps2.sse200.s32k_timer.busslave

Type: PVBusSlave.

fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

fvp_mps2.sse200.s32k_watchdog.busslave

Type: PVBusSlave.

fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: MPS2_SecureCtrl.

fvp_mps2.sse200.secure_control_register_block.bus_mapper

Type: PVBusMapper.

fvp_mps2.sse200.secure_control_register_block.busslave_ns_iot

Type: PVBusSlave.

fvp_mps2.sse200.secure_control_register_block.busslave_ns_mps2

Type: PVBusSlave.

fvp_mps2.sse200.secure_control_register_block.busslave_s_iot

Type: PVBusSlave.

fvp_mps2.sse200.secure_control_register_block.busslave_s_mps2

Type: PVBusSlave.

fvp_mps2.sse200.secure_control_register_block.idau_busmaster

Type: PVBusMaster.

fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

fvp_mps2.sse200.secure_watchdog.busslave

Type: PVBusSlave.

fvp_mps2.sse200.signal_router

Signal router.

Type: `SignalRouter`.

fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: `PPUv0`.

fvp_mps2.sse200.sys_ppu.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.timer0

ARM Timer Module.

Type: `CMSDK_Timer`.

fvp_mps2.sse200.timer0.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.sse200.timer1

ARM Timer Module.

Type: `CMSDK_Timer`.

fvp_mps2.sse200.timer1.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.ssram1.bus_slave

Type: `PVBusSlave`.

fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.ssram2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_i2c1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_i2s.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_spi0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_spi2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer

Type: [svos_DualTimer](#).

fvp_mps2.svos_dualtimer.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster2

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster3

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer2.busslave

Type: [PVBUSSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer3.busslave

Type: [PVBUSSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_PSRAM_M7.mapper

Type: [PVBusMapper](#).

fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_svos_dualtimer.mapper

Type: [PVBusMapper](#).

fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).

fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: [TelnetTerminal](#).

fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: [TelnetTerminal](#).

fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: [MPS2_TouchScreen](#).

fvp_mps2.touchscreen_interface.pvbusslaveType: [PVBusSlave](#).**fvp_mps2.uart_overflows_or_gate**

Or Gate.

Type: [OrGate](#).**idau.bus_bridge**

Bridge incoming transactions to a PVDevice port.

Type: [PVBusBridge](#).

15.7 FVP_MPS2_Cortex-M35P

List of instances in FVP_MPS2_Cortex-M35P.

About FVP_MPS2_Cortex-M35P

The MPS2 platform includes many features that enable the creation of complex software. For those new to TrustZone® for Cortex®-M, however, it might be useful to run the model with some of these features disabled. Running the model with the following parameters disables the IDAU and the Security Gates:

```
--parameter idau.NUM_IDAU_REGION=0 \
--parameter fvp_mps2.DISABLE_GATING=1
```

FVP_MPS2_Cortex-M35P instances

clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**clk25khz**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**cpu0**

ARM CORTEXM35P CT model.

Type: [ARM_Cortex-M35P](#).**cpu0.acp_mapper**Type: [PVBusMapper](#).**cpu0.ext_bus**Type: [PVBusLogger](#).

cpu0.ext_bus.mapperType: [PVBusMapper](#).**cpu0.l2_flusher**

Type: AsyncCacheFlushUnit.

cpu1

ARM CORTEXM35P CT model.

Type: [ARM_Cortex-M35P](#).**cpu1.acp_mapper**Type: [PVBusMapper](#).**cpu1.ext_bus**Type: [PVBusLogger](#).**cpu1.ext_bus.mapper**Type: [PVBusMapper](#).**cpu1.l2_flusher**

Type: AsyncCacheFlushUnit.

fvp_mps2

MPS2 DUT.

Type: FVP_MPS2.

fvp_mps2.GPIO0

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

fvp_mps2.GPIO0.busslaveType: [PVBusSlave](#).**fvp_mps2.GPIO1**

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

fvp_mps2.GPIO1.busslaveType: [PVBusSlave](#).**fvp_mps2.GPIO2**

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

fvp_mps2.GPIO2.busslaveType: [PVBusSlave](#).**fvp_mps2.GPIO3**

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

fvp_mps2.GPIO3.busslaveType: [PVBusSlave](#).

fvp_mps2.GPIO_connection_test

Type: `GPIO_Connection_Test`.

fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: `GPIO_Port_Transfer`.

fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: `GPIO1_Connection_Test`.

fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.PSRAM.bus_slave

Type: `PVBusSlave`.

fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.PSRAM_M7.bus_slave

Type: `PVBusSlave`.

fvp_mps2.UART0

ARM CMSDK UART Module.

Type: `CMSDK_UART`.

fvp_mps2.UART0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.UART0.pvbusslave

Type: `PVBusSlave`.

fvp_mps2.UART1

ARM CMSDK UART Module.

Type: `CMSDK_UART`.

fvp_mps2.UART1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.UART1.pvbusslave

Type: `PVBusSlave`.

fvp_mps2.UART2

ARM CMSDK UART Module.

Type: CMSDK_UART.

fvp_mps2.UART2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.UART2.pvbuslave

Type: PVBusSlave.

fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: MPS2_VGA.

fvp_mps2.VGA_interface.pvbuslave

Type: PVBusSlave.

fvp_mps2.VGA_interface.pvbuslave1

Type: PVBusSlave.

fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper0

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper1

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper10

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper11

Type: [OrGate](#).

fvp_mps2.dbgen_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma0.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma0.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma0.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma0_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma0_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma0_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma0_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma1.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma1.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma1.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma1.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma1.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma1.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma1.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma1_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma1_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma1_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma1_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma1_securitymodifier

Type: `SecurityModifier`.

fvp_mps2.dma1_securitymodifier.pvbusmodifier

Type: `PVBusMapper`.

fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: `PL080_DMAC`.

fvp_mps2.dma2.busmaster0

Type: `PVBusMaster`.

fvp_mps2.dma2.busmaster1

Type: `PVBusMaster`.

fvp_mps2.dma2.busslave

Type: `PVBusSlave`.

fvp_mps2.dma2.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

fvp_mps2.dma2.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

fvp_mps2.dma2.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

fvp_mps2.dma2.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

fvp_mps2.dma2_idau_labeller

Type: `LabellerIdauSecurity`.

fvp_mps2.dma2_idau_labeller.idau_busmaster

Type: `PVBusMaster`.

fvp_mps2.dma2_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma2_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma2_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma3.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma3.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma3.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma3.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma3.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma3.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma3.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma3_idau_labeller
Type: [LabellerIdauSecurity](#).

fvp_mps2.dma3_idau_labeller.idau_busmaster
Type: [PVBusMaster](#).

fvp_mps2.dma3_idau_labeller.pvbusmodifier
Type: [PVBusMapper](#).

fvp_mps2.dma3_idau_labeller.remap_busmaster
Type: [PVBusMaster](#).

fvp_mps2.dma3_securitymodifier
Type: [SecurityModifier](#).

fvp_mps2.dma3_securitymodifier.pvbusmodifier
Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_psram
Global exclusive monitor.
Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_psram.bus_mapper
Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_psram_iotss
Global exclusive monitor.
Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_psram_iotss.bus_mapper
Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss
Allow transactions to be routed arbitrarily.
Type: [PVBusRouter](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss.mapper
Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2
Allow transactions to be routed arbitrarily.
Type: [PVBusRouter](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2.mapper
Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_zbtsram1
Global exclusive monitor.
Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_zbtsram1.bus_mapper
Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_zbtsram2
Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_zbtsram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.fpga_sysctrl.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.mem_switch_extra_psram_iotss.mapper

Type: [PVBusMapper](#).

fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.mem_switch_extra_psram_mps2.mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_audio

MPS2 Audio.

Type: [MPS2_Audio](#).

fvp_mps2.mps2_audio.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.mps2_cmsdk_dualtimer.busslave

Type: PVBusSlave.

fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: PVBusExclusiveMonitor.

fvp_mps2.mps2_exclusive_monitor_zbtsram1.bus_mapper

Type: PVBusMapper.

fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: PVBusExclusiveMonitor.

fvp_mps2.mps2_exclusive_monitor_zbtsram2.bus_mapper

Type: PVBusMapper.

fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: MPS2_LCD.

fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: IoTSS_MemoryProtectionController.

fvp_mps2.mps2_mpc_iotss_ssram1.bus_mapper

Type: PVBusMapper.

fvp_mps2.mps2_mpc_iotss_ssram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

fvp_mps2.mps2_secure_control_register_block.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_secure_control_register_block.busslave_ns_iot

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.busslave_ns_mps2

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.busslave_s_iot

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.busslave_s_mps2

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.mps2_timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.mps2_timer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.mps2_timer1

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.mps2_timer1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: MPS2_Visualisation.

fvp_mps2.niden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: PL022_SSP_MPS2.

fvp_mps2.pl022_ssp_mps2.busslave

Type: [PVBusSlave](#).

fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.platform_bus_switch.mapper

Type: [PVBusMapper](#).

fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.platform_switch_dma0.mapper

Type: [PVBusMapper](#).

fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.platform_switch_dma1.mapper

Type: [PVBusMapper](#).

fvp_mps2.signal_router

Signal router.

Type: [SignalRouter](#).

fvp_mps2.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

fvp_mps2.smc_91c111.SMSC_slave

Type: [PVBusSlave](#).

fvp_mps2.spiden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.spniden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200

SSE-200 subsystem.

Type: [SSE200](#).

fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper0

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper1

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper10

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper11

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper12

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper13

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper14

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper15

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper2

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper3

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper4

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper5

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper6
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper7
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper8
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper9
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1
IoT Subsystem Peripheral Protection Controller.
Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper0
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper1
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper10
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper11
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper12
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper13
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper14
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper15
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper2
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper3
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper4
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper5
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper6
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper7

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper8

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper9

Type: [PVBusMapper](#).

fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.sse200.cmsdk_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.cordio_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.cpu0core_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.cpu0core_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.cpu0dbg_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.cpu0dbg_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.cpu1core_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.cpu1core_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.cpu1dbg_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.cpu1dbg_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.crypto_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.crypto_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.dbg_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.dbg_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0**

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.sse200.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.sse200.idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.internal_msniper_tcm.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIdentity](#).

fvp_mps2.sse200.iotss_cpuidentity.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram3.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

fvp_mps2.sse200.iotss_systemcontrol.busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.iotss_systemcontrol.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

fvp_mps2.sse200.iotss_systeminfo.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_ppu.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.nonsecure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram0_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram1_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram2_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram3_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.s32k_timer.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.s32k_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

fvp_mps2.sse200.secure_control_register_block.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.secure_control_register_block.busslave_ns_iot

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_ns_mps2

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_s_iot

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_s_mps2

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.secure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.signal_router

Signal router.

Type: [SignalRouter](#).

fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.sys_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.timer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.timer1

ARM Timer Module.

Type: CMSDK_Timer.

fvp_mps2.sse200.timer1.busslave

Type: PVBusSlave.

fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

fvp_mps2.ssram1.bus_slave

Type: PVBusSlave.

fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: RAMDevice.

fvp_mps2.ssram2.bus_slave

Type: PVBusSlave.

fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: RAMDevice.

fvp_mps2.stub0.bus_slave

Type: PVBusSlave.

fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

fvp_mps2.stub1.bus_slave

Type: PVBusSlave.

fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: RAMDevice.

fvp_mps2.stub_i2c1.bus_slave

Type: PVBusSlave.

fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_i2s.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_spi0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_spi2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer

Type: [svos_DualTimer](#).

fvp_mps2.svos_dualtimer.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster2

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster3

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer1.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer2.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer3.busslave

Type: [PVBUSSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_PSRAM_M7.mapper

Type: [PVBusMapper](#).

fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_svos_dualtimer.mapper

Type: [PVBusMapper](#).

fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).

fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: [TelnetTerminal](#).

fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: [TelnetTerminal](#).

fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: [MPS2_TouchScreen](#).

fvp_mps2.touchscreen_interface.pvbuslave

Type: [PVBusSlave](#).

fvp_mps2.uart_overflows_or_gate

Or Gate.

Type: [OrGate](#).

idau.bus_bridge

Bridge incoming transactions to a PVDevice port.

Type: [PVBusBridge](#).

15.8 FVP_MPS2_Cortex-M4

List of instances in FVP_MPS2_Cortex-M4.

FVP_MPS2_Cortex-M4 instances

armcortexm4ct

ARM CORTEXM4 CT model.

Type: [ARM_Cortex-M4](#).

armcortexm4ct.acp_mapper

Type: [PVBusMapper](#).

armcortexm4ct.ext_bus

Type: [PVBusLogger](#).

armcortexm4ct.ext_bus.mapper

Type: [PVBusMapper](#).

armcortexm4ct.l2_flusher

Type: [AsyncCacheFlushUnit](#).

clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2

MPS2 DUT.

Type: [FVP_MPS2](#).

fvp_mps2.GPIO0

ARM PrimeCell General Purpose Input/Output.

Type: [CMSDK_GPIO](#).

fvp_mps2.GPIO0.busslave

Type: [PVBusSlave](#).

fvp_mps2.GPIO1

ARM PrimeCell General Purpose Input/Output.

Type: [CMSDK_GPIO](#).

fvp_mps2.GPIO1.busslave

Type: [PVBusSlave](#).

fvp_mps2.GPIO2

ARM PrimeCell General Purpose Input/Output.

Type: [CMSDK_GPIO](#).

fvp_mps2.GPIO2.busslave

Type: [PVBusSlave](#).

fvp_mps2.GPIO3

ARM PrimeCell General Purpose Input/Output.

Type: CMSDK_GPIO.

fvp_mps2.GPIO3.busslave

Type: PVBusSlave.

fvp_mps2.GPIO_connection_test

Type: GPIO_Connection_Test.

fvp_mps2.GPIO_connection_test.GPIO0_port_trans

Type: GPIO_Port_Transfer.

fvp_mps2.GPIO_connection_test.GPIO1_port_test

Type: GPIO1_Connection_Test.

fvp_mps2.PSRAM

RAM device, can be dynamic or static ram.

Type: RAMDevice.

fvp_mps2.PSRAM.bus_slave

Type: PVBusSlave.

fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: RAMDevice.

fvp_mps2.PSRAM_M7.bus_slave

Type: PVBusSlave.

fvp_mps2.UART0

ARM CMSDK UART Module.

Type: CMSDK_UART.

fvp_mps2.UART0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.UART0.pvbusslave

Type: PVBusSlave.

fvp_mps2.UART1

ARM CMSDK UART Module.

Type: CMSDK_UART.

fvp_mps2.UART1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.UART1.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.UART2

ARM CMSDK UART Module.

Type: [CMSDK_UART](#).

fvp_mps2.UART2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.UART2.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: [MPS2_VGA](#).

fvp_mps2.VGA_interface.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.VGA_interface.pvbusslave1

Type: [PVBusSlave](#).

fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper0

Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper1

Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper10

Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper11

Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper12

Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper13

Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper14

Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper15

Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper2

Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper3

Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper4

Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper5

Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper6

Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper7

Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper8

Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper9

Type: [PVBusMapper](#).

fvp_mps2.ahb_ppc_iotss_expansion1

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.ahb_ppc_iotss_expansion1.bus_mapper0

Type: [PVBusMapper](#).

fvp_mps2.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: [CMSDK_SysCtrl](#).

fvp_mps2.cmsdk_sysctrl.busslave

Type: [PVBusSlave](#).

fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.cmsdk_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: [OrGate](#).

fvp_mps2.cpu_wait_or_gate_1

Or Gate.

Type: [OrGate](#).

fvp_mps2.dbgen_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma0.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma0.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma0.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma0_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma0_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma0_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma0_securitymodifier

Type: SecurityModifier.

fvp_mps2.dma0_securitymodifier.pvbusmodifier

Type: PVBusMapper.

fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: PL080_DMAC.

fvp_mps2.dma1.busmaster0

Type: PVBusMaster.

fvp_mps2.dma1.busmaster1

Type: PVBusMaster.

fvp_mps2.dma1.busslave

Type: PVBusSlave.

fvp_mps2.dma1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: ClockTimerThread.

fvp_mps2.dma1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: ClockTimerThread64.

fvp_mps2.dma1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: SchedulerThread.

fvp_mps2.dma1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: SchedulerThreadEvent.

fvp_mps2.dma1_idau_labeller

Type: LabellerIdauSecurity.

fvp_mps2.dma1_idau_labeller.idau_busmaster

Type: PVBusMaster.

fvp_mps2.dma1_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma1_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma1_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma1_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma2.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma2.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma2.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma2.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma2.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma2.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma2.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma2_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma2_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma2_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma2_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma3.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma3.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma3.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma3.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma3.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma3.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma3_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma3_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma3_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma3_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma3_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_psram

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_psram.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_psram_iotss

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_psram_iotss.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss.mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2.mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_zbtsram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_zbtsram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.fpga_sysctrl.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.mem_switch_extra_psram_iotss.mapper

Type: [PVBusMapper](#).

fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.mem_switch_extra_psram_mps2.mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_audio

MPS2 Audio.

Type: `MPS2_Audio`.

fvp_mps2.mps2_audio.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: `CMSDK_DualTimer`.

fvp_mps2.mps2_cmsdk_dualtimer.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

fvp_mps2.mps2_exclusive_monitor_zbtsram1.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

fvp_mps2.mps2_exclusive_monitor_zbtsram2.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: `MPS2_LCD`.

fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

fvp_mps2.mps2_mpc_iotss_ssram1.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.mps2_mpc_iotss_ssram1.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: `MPS2_SecureCtrl`.

fvp_mps2.mps2_secure_control_register_block.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.mps2_secure_control_register_block.busslave_ns_iot

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_ns_mps2

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_s_iot

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_s_mps2

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.idau_busmaster

Type: `PVBusMaster`.

fvp_mps2.mps2_timer0

ARM Timer Module.

Type: `CMSDK_Timer`.

fvp_mps2.mps2_timer0.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_timer0.clk_div

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.mps2_timer1

ARM Timer Module.

Type: CMSDK_Timer.

fvp_mps2.mps2_timer1.busslave

Type: PVBusSlave.

fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: MPS2_Visualisation.

fvp_mps2.niden_or_gate

Or Gate.

Type: OrGate.

fvp_mps2.nmi_or_gate

Or Gate.

Type: OrGate.

fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: PL022_SSP_MPS2.

fvp_mps2.pl022_ssp_mps2.busslave

Type: PVBusSlave.

fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

fvp_mps2.platform_bus_switch.mapper

Type: PVBusMapper.

fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

fvp_mps2.platform_switch_dma0.mapper

Type: [PVBusMapper](#).

fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.platform_switch_dma1.mapper

Type: [PVBusMapper](#).

fvp_mps2.signal_router

Signal router.

Type: [SignalRouter](#).

fvp_mps2.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

fvp_mps2.smc_91c111.SMC_slave

Type: [PVBusSlave](#).

fvp_mps2.spiden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.spniden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200

SSE-200 subsystem.

Type: [SSE200](#).

fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

fvp_mps2.sse200.acg_sram1.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

fvp_mps2.sse200.acg_sram2.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

fvp_mps2.sse200.acg_sram3.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper0

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper1

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper10

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper11

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper12

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper13

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper14

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper15

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper2

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper3

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper4
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper5
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper6
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper7
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper8
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper9
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1
IoT Subsystem Peripheral Protection Controller.
Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper0
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper1
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper10
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper11
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper12
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper13
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper14
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper15
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper2
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper3
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper4
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper5

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper6

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper7

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper8

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper9

Type: [PVBusMapper](#).

fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.sse200.cmsdk_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.cordio_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.cpu0core_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.cpu0dbg_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.cpu1core_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.cpu1dbg_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.crypto_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.dbg_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.sse200.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.sse200.idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.internal_msniper_tcm.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: `IoTSS_CPUIdentity`.

fvp_mps2.sse200.iotss_cpuidentity.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.sse200.iotss_internal_sram0.bus_slave

Type: `PVBusSlave`.

fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.sse200.iotss_internal_sram1.bus_slave

Type: `PVBusSlave`.

fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.sse200.iotss_internal_sram2.bus_slave

Type: `PVBusSlave`.

fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.sse200.iotss_internal_sram3.bus_slave

Type: `PVBusSlave`.

fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: `IoTSS_SystemControl`.

fvp_mps2.sse200.iotss_systemcontrol.busmaster

Type: `PVBusMaster`.

fvp_mps2.sse200.iotss_systemcontrol.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: `IoTSS_SystemInfo`.

fvp_mps2.sse200.iotss_systeminfo.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_ppu.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.nonsecure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram0_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram1_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram2_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram3_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.s32k_timer.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.s32k_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

fvp_mps2.sse200.secure_control_register_block.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.secure_control_register_block.busslave_ns_iot

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_ns_mps2

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_s_iot

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_s_mps2

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.secure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.signal_router

Signal router.

Type: [SignalRouter](#).

fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.sys_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.timer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.sse200.timer1

ARM Timer Module.

Type: CMSDK_Timer.

fvp_mps2.sse200.timer1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.ssram1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.ssram2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_i2c1
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

fvp_mps2.stub_i2c1.bus_slave
Type: [PVBusSlave](#).

fvp_mps2.stub_i2s
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

fvp_mps2.stub_i2s.bus_slave
Type: [PVBusSlave](#).

fvp_mps2.stub_spi0
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

fvp_mps2.stub_spi0.bus_slave
Type: [PVBusSlave](#).

fvp_mps2.stub_spi2
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

fvp_mps2.stub_spi2.bus_slave
Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer
Type: [svos_DualTimer](#).

fvp_mps2.svos_dualtimer.busmaster0
Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster1
Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster2
Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster3
Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busslave
Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0
ARM Dual-Timer Module.
Type: [CMSDK_DualTimer](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.busslave
Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1
Internal component used by SP804 Timer module.
Type: CounterModule.

fvp_mps2.switch_PSRAM_M7
Allow transactions to be routed arbitrarily.
Type: PVBusRouter.

fvp_mps2.switch_PSRAM_M7.mapper
Type: PVBusMapper.

fvp_mps2.switch_svos_dualtimer
Allow transactions to be routed arbitrarily.
Type: PVBusRouter.

fvp_mps2.switch_svos_dualtimer.mapper
Type: PVBusMapper.

fvp_mps2.telnetterminal0
Telnet terminal interface.
Type: TelnetTerminal.

fvp_mps2.telnetterminal1
Telnet terminal interface.
Type: TelnetTerminal.

fvp_mps2.telnetterminal2
Telnet terminal interface.
Type: TelnetTerminal.

fvp_mps2.touchscreen_interface
MPS2 Touch Screen.
Type: MPS2_TouchScreen.

fvp_mps2.touchscreen_interface.pvbusslave
Type: PVBusSlave.

fvp_mps2.uart_overflows_or_gate
Or Gate.
Type: OrGate.

15.9 FVP_MPS2_Cortex-M52

List of instances in FVP_MPS2_Cortex-M52.

About FVP_MPS2_Cortex-M52

The MPS2 platform includes many features that enable the creation of complex software. For those new to TrustZone® for Cortex®-M, however, it might be useful to run the model with some of

these features disabled. Running the model with the following parameters disables the IDAU and the Security Gates:

```
--parameter idau.NUM_IDAU_REGION=0 \
--parameter fvp_mps2.DISABLE_GATING=1
```

FVP_MPS2_Cortex-M52 has the following limitations:

- It does not have the Random number generator or Unique ID/secure storage mentioned in the MPS2 specification.
- The Ethernet controller in the model is a LAN91C111. The MPS2 documents, including those for pre-v8-M cores, specify a LAN9220.
- MTB, ETM, and TPIU are not supported. MTB RAM is absent.
- In the Memory Gating Unit, the model provides a configurable block size. For performance reasons, the minimum block size in the model is 4096 bytes. Hardware and later models may allow smaller block sizes. Software should always use the `BLK_CFG` register to determine block size.
- As in other MPS2 Fast Models, some of the peripherals have minimal implementations:
 - The Audio controller is RAZ/WI.
 - Only the touchscreen functionality of the STMPE811 touchscreen controller is implemented.
 - A subset of the Ampire LCD module's graphics modes are supported.
- See the full set of model parameters and their descriptions by running the model with the `--list-params` argument. Most parameters share their names with a corresponding RTL configuration parameter.

clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

core0_bus_gasket

STLBusGasket allows a debugger or emulated T32 code to force the results of system-register reads by writing an address to the ADDR register then 32-bit values to the VALUE register, which are placed in a fifo associated with that address. A PVBUS transaction into pvbus_in goes unchanged to pvbus_out, unless its address matches that associated with a

non-empty fifo, in which case: writes are ignored, non-word reads abort, and word reads take values from that fifo.

fvp_mps2.dma0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

fvp_mps2.dma0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma0_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma0_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma0_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma0_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma1.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma1.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma1.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

fvp_mps2.dma1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

fvp_mps2.dma1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma1_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma1_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma1_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma1_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma1_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma1_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMACE](#).

fvp_mps2.dma2.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma2.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma2.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma2.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma2.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma2.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma2.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma2_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma2_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma2_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma2_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma3.busmaster0

Type: [PVBUSMaster](#).

fvp_mps2.dma3.busmaster1

Type: [PVBUSMaster](#).

fvp_mps2.dma3.busslave

Type: [PVBUSSlave](#).

fvp_mps2.dma3.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma3.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma3.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma3.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma3_idau_labeller.idau_busmaster

Type: [PVBUSMaster](#).

fvp_mps2.dma3_idau_labeller.pvbusmodifier

Type: [PVBUSMapper](#).

fvp_mps2.dma3_idau_labeller.remap_busmaster

Type: [PVBUSMaster](#).

fvp_mps2.dma3_securitymodifier
Type: SecurityModifier.

fvp_mps2.dma3_securitymodifier.pvbusmodifier
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_psram
Global exclusive monitor.
Type: PVBusExclusiveMonitor.

fvp_mps2.exclusive_monitor_psram.bus_mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_psram_iotss
Global exclusive monitor.
Type: PVBusExclusiveMonitor.

fvp_mps2.exclusive_monitor_psram_iotss.bus_mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss
Allow transactions to be routed arbitrarily.
Type: PVBusRouter.

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss.mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2
Allow transactions to be routed arbitrarily.
Type: PVBusRouter.

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2.mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_zbtsram1
Global exclusive monitor.
Type: PVBusExclusiveMonitor.

fvp_mps2.exclusive_monitor_zbtsram1.bus_mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_zbtsram2
Global exclusive monitor.
Type: PVBusExclusiveMonitor.

fvp_mps2.exclusive_monitor_zbtsram2.bus_mapper
Type: PVBusMapper.

fvp_mps2.exclusive_squasher
Squashes the exclusive attribute on bus transactions.
Type: PVBusExclusiveSquasher.

fvp_mps2.exclusive_squasher.bus_modifier
Type: PVBusMapper.

fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.fpga_sysctrl.pvbusslave

Type: [PVBUSSlave](#).

fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

fvp_mps2.mem_switch_extra_psram_iotss.mapper

Type: [PVBUSMapper](#).

fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

fvp_mps2.mem_switch_extra_psram_mps2.mapper

Type: [PVBUSMapper](#).

fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram1.bus_mapper

Type: [PVBUSMapper](#).

fvp_mps2.mpc_iotss_ssram1.busslave

Type: [PVBUSSlave](#).

fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_audio

MPS2 Audio.

Type: [MPS2_Audio](#).

fvp_mps2.mps2_audio.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.mps2_cmsdk_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: MPS2_LCD.

fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mps2_mpc_iotss_ssram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_mpc_iotss_ssram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: `MPS2_SecureCtrl`.

fvp_mps2.mps2_secure_control_register_block.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.mps2_secure_control_register_block.busslave_ns_iot

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_ns_mps2

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_s_iot

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_s_mps2

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.idau_busmaster

Type: `PVBusMaster`.

fvp_mps2.mps2_timer0

ARM Timer Module.

Type: `CMSDK_Timer`.

fvp_mps2.mps2_timer0.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.mps2_timer1

ARM Timer Module.

Type: `CMSDK_Timer`.

fvp_mps2.mps2_timer1.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: MPS2_Visualisation.

fvp_mps2.niden_or_gate

Or Gate.

Type: OrGate.

fvp_mps2.nmi_or_gate

Or Gate.

Type: OrGate.

fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: PL022_SSP_MPS2.

fvp_mps2.pl022_ssp_mps2.busslave

Type: PVBUSSlave.

fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: PVBUSRouter.

fvp_mps2.platform_bus_switch.mapper

Type: PVBUSMapper.

fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: PVBUSRouter.

fvp_mps2.platform_switch_dma0.mapper

Type: PVBUSMapper.

fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: PVBUSRouter.

fvp_mps2.platform_switch_dma1.mapper

Type: PVBUSMapper.

fvp_mps2.signal_router

Signal router.

Type: SignalRouter.

fvp_mps2.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

fvp_mps2.smc_91c111.SMC_slave

Type: [PVBusSlave](#).

fvp_mps2.spiden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.spniden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200

SSE-200 subsystem.

Type: [SSE200](#).

fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper0

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper1

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper10

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper11

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper12

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper13

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper14

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper15

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper2

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper3

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper4

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper5

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper6

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper7

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper8

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper9
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1
IoT Subsystem Peripheral Protection Controller.
Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper0
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper1
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper10
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper11
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper12
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper13
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper14
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper15
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper2
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper3
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper4
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper5
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper6
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper7
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper8
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper9
Type: [PVBusMapper](#).

fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.sse200.cmsdk_dualtimer.busslave

Type: [PVBUSSlave](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cordio_ppu.busslave

Type: [PVBUSSlave](#).

fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu0core_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu0dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu1core_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu1dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.crypto_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.sse200.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.sse200.idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.internal_msniper_tcm.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIdentity](#).

fvp_mps2.sse200.iotss_cpuidentity.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram3.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

fvp_mps2.sse200.iotss_systemcontrol.busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.iotss_systemcontrol.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

fvp_mps2.sse200.iotss_systeminfo.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc.mapper

Type: [PVBUSMapper](#).

fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

fvp_mps2.sse200.mem_switch_ppu.mapper

Type: [PVBUSMapper](#).

fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu0.busslave

Type: [PVBUSSlave](#).

fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu1.busslave

Type: [PVBUSSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.bus_mapper

Type: [PVBUSMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.busslave

Type: [PVBUSSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.bus_mapper

Type: [PVBUSMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.busslave

Type: [PVBUSSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.nonsecure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram0_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram1_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram2_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram3_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.s32k_timer.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.s32k_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

fvp_mps2.sse200.secure_control_register_block.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.secure_control_register_block.busslave_ns_iot

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_ns_mps2

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_s_iot

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_s_mps2

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.secure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.signal_router

Signal router.

Type: [SignalRouter](#).

fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.sys_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.timer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.timer1

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.timer1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.ssram1.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.ssram2.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub0.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub1.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_i2c1.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_i2s.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_spi0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_spi2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer

Type: [SVOS_DualTimer](#).

fvp_mps2.svos_dualtimer.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster2

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster3

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer1.busslave

Type: PVBusSlave.

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer2.busslave

Type: PVBusSlave.

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer3.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_PSRAM_M7.mapper

Type: [PVBusMapper](#).

fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_svos_dualtimer.mapper

Type: [PVBusMapper](#).

fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).**fvp_mps2.telnetterminal1**

Telnet terminal interface.

Type: [TelnetTerminal](#).**fvp_mps2.telnetterminal2**

Telnet terminal interface.

Type: [TelnetTerminal](#).**fvp_mps2.touchscreen_interface**

MPS2 Touch Screen.

Type: [MPS2_TouchScreen](#).**fvp_mps2.touchscreen_interface.pvbuslave**Type: [PVBusSlave](#).**fvp_mps2.uart_overflows_or_gate**

Or Gate.

Type: [OrGate](#).**idau.bus_bridge**

Bridge incoming transactions to a PVDevice port.

Type: [PVBusBridge](#).

15.10 FVP_MPS2_Cortex-M55

List of instances in FVP_MPS2_Cortex-M55.

About FVP_MPS2_Cortex-M55

The MPS2 platform includes many features that enable the creation of complex software. For those new to TrustZone® for Cortex®-M, however, it might be useful to run the model with some of these features disabled. Running the model with the following parameters disables the IDAU and the Security Gates:

```
--parameter idau.NUM_IDAU_REGION=0 \
--parameter fvp_mps2.DISABLE_GATING=1
```

FVP_MPS2_Cortex-M55 has the following differences from the MPS2 specification:

- The model does not have the random number generator or unique ID/secure storage mentioned in the MPS2 specification because the programmer's view of these devices is yet to be defined.
- The Ethernet controller in the model is a LAN91C111. The MPS2 documents, including those for pre-v8-M cores, specify a LAN9220.
- MTB, ETM, and TPIU are not supported. MTB RAM is absent.

- In the Memory Gating Unit, the model provides a configurable block size. For performance reasons, the minimum block size in the model is 4096 bytes. Hardware and later models might allow smaller block sizes. Software should always use the `BLK_CFG` register to determine block size.
- As in other MPS2 Fast Models, some of the peripherals have minimal implementations:
 - The Audio controller is RAZ/WI.
 - Only the touchscreen functionality of the STMPE811 touchscreen controller is implemented.
 - A subset of the Ampire LCD module's graphics modes are supported.

FVP_MPS2_Cortex-M55 instances

`clk25Mhz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`clk25khz`

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

`core0_bus_gasket`

STLBusGasket allows a debugger or emulated T32 code to force the results of system-register reads by writing an address to the ADDR register then 32-bit values to the VALUE register, which are placed in a fifo associated with that address. A PVBUS transaction into `pvbus_in` goes unchanged to `pvbus_out`, unless its address matches that associated with a non-empty fifo, in which case: writes are ignored, non-word reads abort, and word reads take values from that fifo.

Type: [STLBusGasket](#).

`core0_bus_gasket.busmapper`

fvp_mps2.dma0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma0_idau_labeller

fvp_mps2.exclusive_monitor_psram_iotss.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss.mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2.mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_zbtsram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_zbtsram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.fpga_sysctrl.pvbuslave

Type: [PVBusSlave](#).

fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.mem_switch_extra_psram_iotss.mapper

Type: [PVBusMapper](#).

fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.mem_switch_extra_psram_mps2.mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

fvp_mps2.mpc_iotss_ssram3.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.mpc_iotss_ssram3.busslave

Type: `PVBusSlave`.

fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

fvp_mps2.mps2_audio

MPS2 Audio.

Type: `MPS2_Audio`.

fvp_mps2.mps2_audio.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: `CMSDK_DualTimer`.

fvp_mps2.mps2_cmsdk_dualtimer.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

fvp_mps2.mps2_exclusive_monitor_zbtsram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: [MPS2_LCD](#).

fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mps2_mpc_iotss_ssram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_mpc_iotss_ssram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

fvp_mps2.mps2_secure_control_register_block.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_secure_control_register_block.busslave_ns_iot

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.busslave_ns_mps2

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.busslave_s_iot

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.busslave_s_mps2

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.mps2_timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.mps2_timer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_timer1

ARM Timer Module.

Type: CMSDK_Timer.

fvp_mps2.mps2_timer1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: MPS2_Visualisation.

fvp_mps2.niden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: PL022_SSP_MPS2.

fvp_mps2.pl022_ssp_mps2.busslave

Type: [PVBusSlave](#).

fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.platform_bus_switch.mapper

Type: [PVBusMapper](#).

fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.platform_switch_dma0.mapper

Type: [PVBusMapper](#).

fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.platform_switch_dma1.mapper

Type: [PVBusMapper](#).

fvp_mps2.signal_router

Signal router.

Type: [SignalRouter](#).

fvp_mps2.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

fvp_mps2.smc_91c111.SMSC_slave

Type: [PVBusSlave](#).

fvp_mps2.spiden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.spniden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200

SSE-200 subsystem.

Type: [sse200](#).

fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

fvp_mps2.sse200.acg_cpu0.bus_mapper
Type: `PVBusMapper`.

fvp_mps2.sse200.acg_cpu1
IoT Subsystem Access Control Gate.
Type: `IoTSS_AccessControlGate`.

fvp_mps2.sse200.acg_cpu1.bus_mapper
Type: `PVBusMapper`.

fvp_mps2.sse200.acg_sram0
IoT Subsystem Access Control Gate.
Type: `IoTSS_AccessControlGate`.

fvp_mps2.sse200.acg_sram0.bus_mapper
Type: `PVBusMapper`.

fvp_mps2.sse200.acg_sram1
IoT Subsystem Access Control Gate.
Type: `IoTSS_AccessControlGate`.

fvp_mps2.sse200.acg_sram1.bus_mapper
Type: `PVBusMapper`.

fvp_mps2.sse200.acg_sram2
IoT Subsystem Access Control Gate.
Type: `IoTSS_AccessControlGate`.

fvp_mps2.sse200.acg_sram2.bus_mapper
Type: `PVBusMapper`.

fvp_mps2.sse200.acg_sram3
IoT Subsystem Access Control Gate.
Type: `IoTSS_AccessControlGate`.

fvp_mps2.sse200.acg_sram3.bus_mapper
Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0
IoT Subsystem Peripheral Protection Controller.
Type: `IoTSS_PeripheralProtectionController`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper0
Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper1
Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper10
Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper11
Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper12
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper13
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper14
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper15
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper2
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper3
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper4
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper5
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper6
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper7
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper8
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper9
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1
IoT Subsystem Peripheral Protection Controller.
Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper0
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper1
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper10
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper11
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper12
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper13Type: [PVBusMapper](#).**fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper14**Type: [PVBusMapper](#).**fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper15**Type: [PVBusMapper](#).**fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper2**Type: [PVBusMapper](#).**fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper3**Type: [PVBusMapper](#).**fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper4**Type: [PVBusMapper](#).**fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper5**Type: [PVBusMapper](#).**fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper6**Type: [PVBusMapper](#).**fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper7**Type: [PVBusMapper](#).**fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper8**Type: [PVBusMapper](#).**fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper9**Type: [PVBusMapper](#).**fvp_mps2.sse200.clock32kHz**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**fvp_mps2.sse200.clockdivider**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**fvp_mps2.sse200.cmsdk_dualtimer**

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).**fvp_mps2.sse200.cmsdk_dualtimer.busslave**Type: [PVBusSlave](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cordio_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu0core_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu0dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu1core_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu1dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.crypto_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.sse200.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.sse200.idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.internal_msniper_tcm.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIdentity](#).

fvp_mps2.sse200.iotss_cpuidentity.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram3.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

fvp_mps2.sse200.iotss_systemcontrol.busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.iotss_systemcontrol.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

fvp_mps2.sse200.iotss_systeminfo.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_ppu.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.nonsecure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram0_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.busslave

Type: PVBusSlave.

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer1.busslave

Type: PVBusSlave.

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer2.busslave

Type: PVBusSlave.

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer3.busslave

Type: PVBusSlave.

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_PSRAM_M7.mapper

Type: [PVBusMapper](#).

fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_svos_dualtimer.mapper

Type: [PVBusMapper](#).

fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).

fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: [TelnetTerminal](#).

fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: [TelnetTerminal](#).

fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: MPS2_TouchScreen.

fvp_mps2.touchscreen_interface.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: CMSDK_SysCtrl.

fvp_mps2.cmsdk_sysctrl.busslave

Type: [PVBusSlave](#).

fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.cmsdk_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: [OrGate](#).

fvp_mps2.cpu_wait_or_gate_1

Or Gate.

Type: [OrGate](#).

fvp_mps2.dbgen_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma0.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma0.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma0.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma0_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma0_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma0_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma0_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma1.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma1.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma1.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

fvp_mps2.dma1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

fvp_mps2.dma1.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

fvp_mps2.dma1.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

fvp_mps2.dma1_idau_labeller

Type: `LabellerIdauSecurity`.

fvp_mps2.dma1_idau_labeller.idau_busmaster

Type: `PVBusMaster`.

fvp_mps2.dma1_idau_labeller.pvbusmodifier

Type: `PVBusMapper`.

fvp_mps2.dma1_idau_labeller.remap_busmaster

Type: `PVBusMaster`.

fvp_mps2.dma1_securitymodifier

Type: `SecurityModifier`.

fvp_mps2.dma1_securitymodifier.pvbusmodifier

Type: `PVBusMapper`.

fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: `PL080_DMACE`.

fvp_mps2.dma2.busmaster0

Type: `PVBusMaster`.

fvp_mps2.dma2.busmaster1

Type: `PVBusMaster`.

fvp_mps2.dma2.busslave

Type: `PVBusSlave`.

fvp_mps2.dma2.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

fvp_mps2.dma2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

fvp_mps2.dma2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma2_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma2_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

Type: [PVBusMaster](#).

fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma2_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma3.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma3.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma3.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

fvp_mps2.dma3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

fvp_mps2.dma3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma3_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma3_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma3_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma3_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma3_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_psram

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_psram.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_psram_iotss

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_psram_iotss.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss.mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2.mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_zbtsram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_zbtsram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.fpga_sysctrl.pvbuslave

Type: [PVBusSlave](#).

fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.mem_switch_extra_psram_iotss.mapper

Type: [PVBusMapper](#).

fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.mem_switch_extra_psram_mps2.mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_audio

MPS2 Audio.

Type: [MPS2_Audio](#).

fvp_mps2.mps2_audio.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.mps2_cmsdk_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: MPS2_LCD.

fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mps2_mpc_iotss_ssram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_mpc_iotss_ssram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: MPS2_SecureCtrl.

fvp_mps2.mps2_secure_control_register_block.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_secure_control_register_block.busslave_ns_iod

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.busslave_ns_mps2

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.busslave_s_iod

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.busslave_s_mps2

Type: [PVBusSlave](#).

fvp_mps2.mps2_secure_control_register_block.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.mps2_timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.mps2_timer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.mps2_timer1

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.mps2_timer1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: [MPS2_Visualisation](#).

fvp_mps2.niden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: `PL022_SSP_MPS2`.

fvp_mps2.pl022_ssp_mps2.busslave

Type: `PVBusSlave`.

fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

fvp_mps2.platform_bus_switch.mapper

Type: `PVBusMapper`.

fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

fvp_mps2.platform_switch_dma0.mapper

Type: `PVBusMapper`.

fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: `PVBusRouter`.

fvp_mps2.platform_switch_dma1.mapper

Type: `PVBusMapper`.

fvp_mps2.signal_router

Signal router.

Type: `SignalRouter`.

fvp_mps2.smc_91c111

SMSC 91C111 ethernet controller.

Type: `SMSC_91C111`.

fvp_mps2.smc_91c111.SMSC_slave

Type: `PVBusSlave`.

fvp_mps2.spiden_or_gate

Or Gate.

Type: `OrGate`.

fvp_mps2.spniden_or_gate

Or Gate.

Type: `OrGate`.

fvp_mps2.sse200

SSE-200 subsystem.

Type: SSE200.

fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

fvp_mps2.sse200.acg_cpu0.bus_mapperType: [PVBusMapper](#).**fvp_mps2.sse200.acg_cpu1**

IoT Subsystem Access Control Gate.

Type: IoTSS_AccessControlGate.

fvp_mps2.sse200.acg_cpu1.bus_mapperType: [PVBusMapper](#).**fvp_mps2.sse200.acg_sram0**

IoT Subsystem Access Control Gate.

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper8

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper9

Type: [PVBusMapper](#).

fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.sse200.cmsdk_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cordio_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu0core_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu0dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: `PPUv0`.

fvp_mps2.sse200.cpu1core_ppu.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: `PPUv0`.

fvp_mps2.sse200.cpu1dbg_ppu.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: `PPUv0`.

fvp_mps2.sse200.crypto_ppu.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: `PPUv0`.

fvp_mps2.sse200.dbg_ppu.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.sse200.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.sse200.idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.internal_msniper_tcm.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIdentity](#).

fvp_mps2.sse200.iotss_cpuidentity.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram3.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

fvp_mps2.sse200.iotss_systemcontrol.busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.iotss_systemcontrol.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

fvp_mps2.sse200.iotss_systeminfo.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_ppu.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: `IoTSS_MessageHandlingUnit`.

fvp_mps2.sse200.mhu0.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: `IoTSS_MessageHandlingUnit`.

fvp_mps2.sse200.mhu1.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

fvp_mps2.sse200.mpc_iotss_internal_sram0.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.mpc_iotss_internal_sram0.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

fvp_mps2.sse200.mpc_iotss_internal_sram1.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.mpc_iotss_internal_sram1.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

fvp_mps2.sse200.mpc_iotss_internal_sram2.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.mpc_iotss_internal_sram2.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.nonsecure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram0_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram1_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram2_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram3_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: CMSDK_Timer.

fvp_mps2.sse200.s32k_timer.busslave

Type: PVBusSlave.

fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

fvp_mps2.sse200.s32k_watchdog.busslave

Type: PVBusSlave.

fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: MPS2_SecureCtrl.

fvp_mps2.sse200.secure_control_register_block.bus_mapper

Type: PVBusMapper.

fvp_mps2.sse200.secure_control_register_block.busslave_ns_iot

Type: PVBusSlave.

fvp_mps2.sse200.secure_control_register_block.busslave_ns_mps2

Type: PVBusSlave.

fvp_mps2.sse200.secure_control_register_block.busslave_s_iot

Type: PVBusSlave.

fvp_mps2.sse200.secure_control_register_block.busslave_s_mps2

Type: PVBusSlave.

fvp_mps2.sse200.secure_control_register_block.idau_busmaster

Type: PVBusMaster.

fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: CMSDK_Watchdog.

fvp_mps2.sse200.secure_watchdog.busslave

Type: PVBusSlave.

fvp_mps2.sse200.signal_router

Signal router.

Type: `SignalRouter`.

fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: `PPUv0`.

fvp_mps2.sse200.sys_ppu.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.timer0

ARM Timer Module.

Type: `CMSDK_Timer`.

fvp_mps2.sse200.timer0.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.sse200.timer1

ARM Timer Module.

Type: `CMSDK_Timer`.

fvp_mps2.sse200.timer1.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.ssram1.bus_slave

Type: `PVBusSlave`.

fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.ssram2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_i2c1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_i2s.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_spi0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_spi2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer

Type: [svos_DualTimer](#).

fvp_mps2.svos_dualtimer.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster2

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster3

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer2.busslave

Type: [PVBUSSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer3.busslave

Type: [PVBUSSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_PSRAM_M7.mapper

Type: [PVBusMapper](#).

fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_svos_dualtimer.mapper

Type: [PVBusMapper](#).

fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).

fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: [TelnetTerminal](#).

fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: [TelnetTerminal](#).

fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: [MPS2_TouchScreen](#).

fvp_mps2.touchscreen_interface.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.uart_overflows_or_gate

Or Gate.

Type: [OrGate](#).

List of instances in FVP_MPS2_Cortex-M85.

About FVP_MPS2_Cortex-M85

The MPS2 platform includes many features that enable the creation of complex software. For those new to TrustZone® for Cortex®-M, however, it might be useful to run the model with some of these features disabled. Running the model with the following parameters disables the IDAU and the Security Gates:

```
--parameter idau.NUM_IDAU_REGION=0 \
--parameter fvp_mps2.DISABLE_GATING=1
```

FVP_MPS2_Cortex-M85 has the following differences from the MPS2 specification:

- The model does not have the random number generator or unique ID/secure storage mentioned in the MPS2 specification because the programmer's view of these devices is yet to be defined.
- The Ethernet controller in the model is a LAN91C111. The MPS2 documents, including those for pre-v8-M cores, specify a LAN9220.
- MTB, ETM, and TPIU are not supported. MTB RAM is absent.
- In the Memory Gating Unit, the model provides a configurable block size. For performance reasons, the minimum block size in the model is 4096 bytes. Hardware and later models might allow smaller block sizes. Software should always use the `BLK_CFG` register to determine block size.
- As in other MPS2 Fast Models, some of the peripherals have minimal implementations:
 - The Audio controller is RAZ/WI.
 - Only the touchscreen functionality of the STMPE811 touchscreen controller is implemented.
 - A subset of the Ampire LCD module's graphics modes are supported.
- See the full set of model parameters and their descriptions by running the model with the `--list-params` argument. Most parameters share their names with a corresponding RTL configuration parameter.

FVP_MPS2_Cortex-M85 instances

clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

core0_bus_gasket

STLBusGasket allows a debugger or emulated T32 code to force the results of system-register reads by writing an address to the ADDR register then 32-bit values to the VALUE register, which are placed in a fifo associated with that address. A PVBUS transaction into pvbus_in goes unchanged to pvbus_out, unless its address matches that associated with a non-empty fifo, in which case: writes are ignored, non-word reads abort, and word reads take values from that fifo.

Type: [PL080_DMAC](#).

fvp_mps2.dma0.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma0.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma0.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma0_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma3.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma3.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma3.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma3_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma3_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma3_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma3_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma3_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_psram

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_psram.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_psram_iotss

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_psram_iotss.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss.mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2.mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_zbtsram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.exclusive_monitor_zbtsram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.fpga_sysctrl.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.mem_switch_extra_psram_iotss.mapper

Type: [PVBusMapper](#).

fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.mem_switch_extra_psram_mps2.mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_audio

MPS2 Audio.

Type: `MPS2_Audio`.

fvp_mps2.mps2_audio.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: `CMSDK_DualTimer`.

fvp_mps2.mps2_cmsdk_dualtimer.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

fvp_mps2.mps2_exclusive_monitor_zbtsram1.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

fvp_mps2.mps2_exclusive_monitor_zbtsram2.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: `MPS2_LCD`.

fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: `IoTSS_MemoryProtectionController`.

fvp_mps2.mps2_mpc_iotss_ssram1.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.mps2_mpc_iotss_ssram1.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: `MPS2_SecureCtrl`.

fvp_mps2.mps2_secure_control_register_block.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.mps2_secure_control_register_block.busslave_ns_iot

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_ns_mps2

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_s_iot

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_s_mps2

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.idau_busmaster

Type: `PVBusMaster`.

fvp_mps2.mps2_timer0

ARM Timer Module.

Type: `CMSDK_Timer`.

fvp_mps2.mps2_timer0.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_timer0.clk_div

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.mps2_timer1

ARM Timer Module.

Type: CMSDK_Timer.

fvp_mps2.mps2_timer1.busslave

Type: PVBusSlave.

fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: MPS2_Visualisation.

fvp_mps2.niden_or_gate

Or Gate.

Type: OrGate.

fvp_mps2.nmi_or_gate

Or Gate.

Type: OrGate.

fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: PL022_SSP_MPS2.

fvp_mps2.pl022_ssp_mps2.busslave

Type: PVBusSlave.

fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

fvp_mps2.platform_bus_switch.mapper

Type: PVBusMapper.

fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

fvp_mps2.platform_switch_dma0.mapper

Type: [PVBusMapper](#).

fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.platform_switch_dma1.mapper

Type: [PVBusMapper](#).

fvp_mps2.signal_router

Signal router.

Type: [SignalRouter](#).

fvp_mps2.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

fvp_mps2.smsc_91c111.SMSC_slave

Type: [PVBusSlave](#).

fvp_mps2.spiden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.spniden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200

SSE-200 subsystem.

Type: [SSE200](#).

fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

fvp_mps2.sse200.acg_sram1.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

fvp_mps2.sse200.acg_sram2.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: `IoTSS_AccessControlGate`.

fvp_mps2.sse200.acg_sram3.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: `IoTSS_PeripheralProtectionController`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper0

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper1

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper10

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper11

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper12

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper13

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper14

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper15

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper2

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper3

Type: `PVBusMapper`.

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper4
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper5
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper6
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper7
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper8
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper9
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1
IoT Subsystem Peripheral Protection Controller.
Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper0
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper1
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper10
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper11
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper12
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper13
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper14
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper15
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper2
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper3
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper4
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper5

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper6

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper7

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper8

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper9

Type: [PVBusMapper](#).

fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.sse200.cmsdk_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.cordio_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.cpu0core_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.cpu0dbg_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.cpu1core_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.cpu1dbg_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.crypto_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: PPUv0.

fvp_mps2.sse200.dbg_ppu.busslave

Type: PVBusSlave.

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.sse200.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.sse200.idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.internal_msniper_tcm.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: `IoTSS_CPUIdentity`.

fvp_mps2.sse200.iotss_cpuidentity.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.sse200.iotss_internal_sram0.bus_slave

Type: `PVBusSlave`.

fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.sse200.iotss_internal_sram1.bus_slave

Type: `PVBusSlave`.

fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.sse200.iotss_internal_sram2.bus_slave

Type: `PVBusSlave`.

fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

fvp_mps2.sse200.iotss_internal_sram3.bus_slave

Type: `PVBusSlave`.

fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: `IoTSS_SystemControl`.

fvp_mps2.sse200.iotss_systemcontrol.busmaster

Type: `PVBusMaster`.

fvp_mps2.sse200.iotss_systemcontrol.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: `IoTSS_SystemInfo`.

fvp_mps2.sse200.iotss_systeminfo.busslave

Type: `PVBusSlave`.

fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_ppu.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.nonsecure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram0_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram1_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram2_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram3_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.s32k_timer.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.s32k_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

fvp_mps2.sse200.secure_control_register_block.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.secure_control_register_block.busslave_ns_iot

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_ns_mps2

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_s_iot

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_s_mps2

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.secure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.signal_router

Signal router.

Type: [SignalRouter](#).

fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.sys_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.timer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.sse200.timer1

ARM Timer Module.

Type: CMSDK_Timer.

fvp_mps2.sse200.timer1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.ssram1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.ssram2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_i2c1
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

fvp_mps2.stub_i2c1.bus_slave
Type: [PVBusSlave](#).

fvp_mps2.stub_i2s
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

fvp_mps2.stub_i2s.bus_slave
Type: [PVBusSlave](#).

fvp_mps2.stub_spi0
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

fvp_mps2.stub_spi0.bus_slave
Type: [PVBusSlave](#).

fvp_mps2.stub_spi2
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

fvp_mps2.stub_spi2.bus_slave
Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer
Type: [svos_DualTimer](#).

fvp_mps2.svos_dualtimer.busmaster0
Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster1
Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster2
Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster3
Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busslave
Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0
ARM Dual-Timer Module.
Type: [CMSDK_DualTimer](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.busslave
Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer1.busslave

Type: [PVBUSSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer2.busslave

Type: PVBusSlave.

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer3.busslave

Type: PVBusSlave.

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1
Internal component used by SP804 Timer module.
Type: CounterModule.

fvp_mps2.switch_PSRAM_M7
Allow transactions to be routed arbitrarily.
Type: PVBusRouter.

fvp_mps2.switch_PSRAM_M7.mapper
Type: PVBusMapper.

fvp_mps2.switch_svos_dualtimer
Allow transactions to be routed arbitrarily.
Type: PVBusRouter.

fvp_mps2.switch_svos_dualtimer.mapper
Type: PVBusMapper.

fvp_mps2.telnetterminal0
Telnet terminal interface.
Type: TelnetTerminal.

fvp_mps2.telnetterminal1
Telnet terminal interface.
Type: TelnetTerminal.

fvp_mps2.telnetterminal2
Telnet terminal interface.
Type: TelnetTerminal.

fvp_mps2.touchscreen_interface
MPS2 Touch Screen.
Type: MPS2_TouchScreen.

fvp_mps2.touchscreen_interface.pvbusslave
Type: PVBusSlave.

fvp_mps2.uart_overflows_or_gate
Or Gate.
Type: OrGate.

idau.bus_bridge
Bridge incoming transactions to a PVDevice port.
Type: PVBusBridge.

15.13 FVP_MPS2_SSE-200_Cortex-M33

List of instances in FVP_MPS2_SSE-200_Cortex-M33.

About FVP_MPS2_SSE-200_Cortex-M33

The MPS2 platform includes many features that enable the creation of complex software. For those new to TrustZone® for Cortex®-M, however, it might be useful to run the model with some of these features disabled. Running the model with the following parameters disables the IDAU and the Security Gates:

```
--parameter idau.NUM_IDAU_REGION=0 \  
--parameter fvp_mps2.DISABLE_GATING=1
```

FVP_MPS2_SSE-200_Cortex-M33 instances

clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cpu0

ARM CORTEXM33 CT model.

Type: [ARM_Cortex-M33](#).

cpu0.acp_mapper

Type: [PVBusMapper](#).

cpu0.ext_bus

Type: [PVBusLogger](#).

cpu0.ext_bus.mapper

Type: [PVBusMapper](#).

cpu0.l2_flusher

Type: [AsyncCacheFlushUnit](#).

cpu1

ARM CORTEXM33 CT model.

Type: [ARM_Cortex-M33](#).

cpu1.acp_mapper

Type: [PVBusMapper](#).

cpu1.ext_bus
Type: [PVBusLogger](#).

cpu1.ext_bus.mapper
Type: [PVBusMapper](#).

cpu1.l2_flusher
Type: AsyncCacheFlushUnit.

fvp_mps2
MPS2 DUT.
Type: FVP_MPS2.

fvp_mps2.GPIO0
ARM PrimeCell General Purpose Input/Output.
Type: CMSDK_GPIO.

fvp_mps2.GPIO0.busslave
Type: [PVBusSlave](#).

fvp_mps2.GPIO1
ARM PrimeCell General Purpose Input/Output.
Type: CMSDK_GPIO.

fvp_mps2.GPIO1.busslave
Type: [PVBusSlave](#).

fvp_mps2.GPIO2
ARM PrimeCell General Purpose Input/Output.
Type: CMSDK_GPIO.

fvp_mps2.GPIO2.busslave
Type: [PVBusSlave](#).

fvp_mps2.GPIO3
ARM PrimeCell General Purpose Input/Output.
Type: CMSDK_GPIO.

fvp_mps2.GPIO3.busslave
Type: [PVBusSlave](#).

fvp_mps2.GPIO_connection_test
Type: GPIO_Connection_Test.

fvp_mps2.GPIO_connection_test.GPIO0_port_trans
Type: GPIO_Port_Transfer.

fvp_mps2.GPIO_connection_test.GPIO1_port_test
Type: GPIO1_Connection_Test.

fvp_mps2.PSRAM
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

fvp_mps2.PSRAM.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.PSRAM_M7

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.PSRAM_M7.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.UART0

ARM CMSDK UART Module.

Type: [CMSDK_UART](#).

fvp_mps2.UART0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.UART0.pvbuslave

Type: [PVBusSlave](#).

fvp_mps2.UART1

ARM CMSDK UART Module.

Type: [CMSDK_UART](#).

fvp_mps2.UART1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.UART1.pvbuslave

Type: [PVBusSlave](#).

fvp_mps2.UART2

ARM CMSDK UART Module.

Type: [CMSDK_UART](#).

fvp_mps2.UART2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.UART2.pvbuslave

Type: [PVBusSlave](#).

fvp_mps2.VGA_interface

VGA display interface between main bus and visualisation.

Type: MPS2_VGA.

fvp_mps2.VGA_interface.pvbuslave

Type: PVBusSlave.

fvp_mps2.VGA_interface.pvbuslave1

Type: PVBusSlave.

fvp_mps2.ahb_ppc_iotss_expansion0

IoT Subsystem Peripheral Protection Controller.

Type: IoTSS_PeripheralProtectionController.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper0

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper1

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper10

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper11

Type: PVBusMapper.

fvp_mps2.ahb_ppc_iotss_expansion0.bus_mapper12

Type: PVBusMapper.

Type: [PVBusMapper](#).

fvp_mps2.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.cmsdk_sysctrl

Cortex-M Simple System Control.

Type: [CMSDK_SysCtrl](#).

fvp_mps2.cmsdk_sysctrl.busslave

Type: [PVBusSlave](#).

fvp_mps2.cmsdk_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.cmsdk_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.cpu_wait_or_gate_0

Or Gate.

Type: [OrGate](#).

fvp_mps2.cpu_wait_or_gate_1

Or Gate.

Type: [OrGate](#).

fvp_mps2.dbgen_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.dma0

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma0.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma0.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma0.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

fvp_mps2.dma0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma0_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma0_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma0_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma0_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma0_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma0_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma1

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma1.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma1.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma1.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

fvp_mps2.dma1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

fvp_mps2.dma1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma1_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma1_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma1_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma1_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma1_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma1_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma2

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMACE](#).

fvp_mps2.dma2.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.dma2.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.dma2.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma2.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma2.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma2.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma2.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma2_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma2_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma2_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma2_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma2_securitymodifier

Type: [SecurityModifier](#).

fvp_mps2.dma2_securitymodifier.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma3

ARM PrimeCell DMA Controller(PL080/081).

Type: [PL080_DMAC](#).

fvp_mps2.dma3.busmaster0

Type: [PVBUSMaster](#).

fvp_mps2.dma3.busmaster1

Type: [PVBUSMaster](#).

fvp_mps2.dma3.busslave

Type: [PVBUSSlave](#).

fvp_mps2.dma3.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

fvp_mps2.dma3.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

fvp_mps2.dma3.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma3.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma3_idau_labeller.idau_busmaster

Type: [PVBUSMaster](#).

fvp_mps2.dma3_idau_labeller.pvbusmodifier

Type: [PVBUSMapper](#).

fvp_mps2.dma3_idau_labeller.remap_busmaster

Type: [PVBUSMaster](#).

fvp_mps2.dma3_securitymodifier
Type: SecurityModifier.

fvp_mps2.dma3_securitymodifier.pvbusmodifier
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_psram
Global exclusive monitor.
Type: PVBusExclusiveMonitor.

fvp_mps2.exclusive_monitor_psram.bus_mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_psram_iotss
Global exclusive monitor.
Type: PVBusExclusiveMonitor.

fvp_mps2.exclusive_monitor_psram_iotss.bus_mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss
Allow transactions to be routed arbitrarily.
Type: PVBusRouter.

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss.mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2
Allow transactions to be routed arbitrarily.
Type: PVBusRouter.

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2.mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_zbtsram1
Global exclusive monitor.
Type: PVBusExclusiveMonitor.

fvp_mps2.exclusive_monitor_zbtsram1.bus_mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_zbtsram2
Global exclusive monitor.
Type: PVBusExclusiveMonitor.

fvp_mps2.exclusive_monitor_zbtsram2.bus_mapper
Type: PVBusMapper.

fvp_mps2.exclusive_squasher
Squashes the exclusive attribute on bus transactions.
Type: PVBusExclusiveSquasher.

fvp_mps2.exclusive_squasher.bus_modifier
Type: PVBusMapper.

fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.fpga_sysctrl.pvbusslave

Type: [PVBUSSlave](#).

fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

fvp_mps2.mem_switch_extra_psram_iotss.mapper

Type: [PVBUSMapper](#).

fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

fvp_mps2.mem_switch_extra_psram_mps2.mapper

Type: [PVBUSMapper](#).

fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram1.bus_mapper

Type: [PVBUSMapper](#).

fvp_mps2.mpc_iotss_ssram1.busslave

Type: [PVBUSSlave](#).

fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_audio

MPS2 Audio.

Type: [MPS2_Audio](#).

fvp_mps2.mps2_audio.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.mps2_cmsdk_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: MPS2_LCD.

fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mps2_mpc_iotss_ssram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_mpc_iotss_ssram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: `MPS2_SecureCtrl`.

fvp_mps2.mps2_secure_control_register_block.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.mps2_secure_control_register_block.busslave_ns_iot

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_ns_mps2

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_s_iot

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_s_mps2

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.idau_busmaster

Type: `PVBusMaster`.

fvp_mps2.mps2_timer0

ARM Timer Module.

Type: `CMSDK_Timer`.

fvp_mps2.mps2_timer0.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_timer0.clk_div

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.mps2_timer1

ARM Timer Module.

Type: `CMSDK_Timer`.

fvp_mps2.mps2_timer1.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_timer1.clk_div

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: MPS2_Visualisation.

fvp_mps2.niden_or_gate

Or Gate.

Type: OrGate.

fvp_mps2.nmi_or_gate

Or Gate.

Type: OrGate.

fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: PL022_SSP_MPS2.

fvp_mps2.pl022_ssp_mps2.busslave

Type: PVBusSlave.

fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

fvp_mps2.platform_bus_switch.mapper

Type: PVBusMapper.

fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

fvp_mps2.platform_switch_dma0.mapper

Type: PVBusMapper.

fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: PVBusRouter.

fvp_mps2.platform_switch_dma1.mapper

Type: PVBusMapper.

fvp_mps2.signal_router

Signal router.

Type: SignalRouter.

fvp_mps2.smc_91c111
SMSC 91C111 ethernet controller.
Type: [SMSC_91C111](#).

fvp_mps2.smc_91c111.SMC slave
Type: [PVBusSlave](#).

fvp_mps2.spiden_or_gate
Or Gate.
Type: [OrGate](#).

fvp_mps2.spniden_or_gate
Or Gate.
Type: [OrGate](#).

fvp_mps2.sse200
SSE-200 subsystem.
Type: [SSE200](#).

fvp_mps2.sse200.acg_cpu0
IoT Subsystem Access Control Gate.
Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu0.bus_mapper
Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_cpu1
IoT Subsystem Access Control Gate.
Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu1.bus_mapper
Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram0
IoT Subsystem Access Control Gate.
Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram0.bus_mapper
Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram1
IoT Subsystem Access Control Gate.
Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram1.bus_mapper
Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram2
IoT Subsystem Access Control Gate.
Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram2.bus_mapper
Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper0

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper1

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper10

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper11

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper12

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper13

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper14

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper15

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper2

Type: [PVBusMapper](#).

fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.sse200.cmsdk_dualtimer.busslave

Type: [PVBUSSlave](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cordio_ppu.busslave

Type: [PVBUSSlave](#).

fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu0core_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu0dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu1core_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu1dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.crypto_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.sse200.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.sse200.idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.internal_msniper_tcm.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIdentity](#).

fvp_mps2.sse200.iotss_cpuidentity.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram3.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

fvp_mps2.sse200.iotss_systemcontrol.busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.iotss_systemcontrol.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

fvp_mps2.sse200.iotss_systeminfo.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_ppu.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.nonsecure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram0_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram1_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.ram2_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.ram3_ppu**

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).**fvp_mps2.sse200.ram3_ppu.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.s32k_timer**

ARM Timer Module.

Type: [CMSDK_Timer](#).**fvp_mps2.sse200.s32k_timer.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.s32k_timer.clk_div**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**fvp_mps2.sse200.s32k_timer.counter**

Internal component used by SP804 Timer module.

Type: [CounterModule](#).**fvp_mps2.sse200.s32k_watchdog**

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).**fvp_mps2.sse200.s32k_watchdog.busslave**Type: [PVBusSlave](#).**fvp_mps2.sse200.secure_control_register_block**

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).**fvp_mps2.sse200.secure_control_register_block.bus_mapper**Type: [PVBusMapper](#).**fvp_mps2.sse200.secure_control_register_block.busslave_ns_iot**Type: [PVBusSlave](#).**fvp_mps2.sse200.secure_control_register_block.busslave_ns_mps2**Type: [PVBusSlave](#).**fvp_mps2.sse200.secure_control_register_block.busslave_s_iot**Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_s_mps2

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.secure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.signal_router

Signal router.

Type: [SignalRouter](#).

fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.sys_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.timer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.timer1

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.timer1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.ssram1.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.ssram2.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub0.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub1.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_i2c1.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_i2s.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_spi0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_spi2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer

Type: [SVOS_DualTimer](#).

fvp_mps2.svos_dualtimer.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster2

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster3

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer1.busslave

Type: PVBusSlave.

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer2.busslave

Type: PVBusSlave.

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer3.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_PSRAM_M7.mapper

Type: [PVBusMapper](#).

fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_svos_dualtimer.mapper

Type: [PVBusMapper](#).

fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).**fvp_mps2.telnetterminal1**

Telnet terminal interface.

Type: [TelnetTerminal](#).**fvp_mps2.telnetterminal2**

Telnet terminal interface.

Type: [TelnetTerminal](#).**fvp_mps2.touchscreen_interface**

MPS2 Touch Screen.

Type: [MPS2_TouchScreen](#).**fvp_mps2.touchscreen_interface.pvbuslave**Type: [PVBusSlave](#).**fvp_mps2.uart_overflows_or_gate**

Or Gate.

Type: [OrGate](#).**idau.bus_bridge**

Bridge incoming transactions to a PVDevice port.

Type: [PVBusBridge](#).

15.14 FVP_MPS2_SSE-200_Cortex-M55

List of instances in FVP_MPS2_SSE-200_Cortex-M55.

About FVP_MPS2_SSE-200_Cortex-M55

The MPS2 platform includes many features that enable the creation of complex software. For those new to TrustZone® for Cortex®-M, however, it might be useful to run the model with some of these features disabled. Running the model with the following parameters disables the IDAU and the Security Gates:

```
--parameter idau.NUM_IDAU_REGION=0 \
--parameter fvp_mps2.DISABLE_GATING=1
```

FVP_MPS2_SSE-200_Cortex-M55 instances

clk25Mhz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clk25khz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [PVBusMaster](#).

fvp_mps2.dma0.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

fvp_mps2.dma0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

fvp_mps2.dma0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma0_idau_labeller

fvp_mps2.dma3.busslave

Type: [PVBusSlave](#).

fvp_mps2.dma3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

fvp_mps2.dma3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

fvp_mps2.dma3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

fvp_mps2.dma3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.dma3_idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.dma3_idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma3_idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.dma3_idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.dma3_securitymodifier
Type: SecurityModifier.

fvp_mps2.dma3_securitymodifier.pvbusmodifier
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_psram
Global exclusive monitor.
Type: PVBusExclusiveMonitor.

fvp_mps2.exclusive_monitor_psram.bus_mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_psram_iotss
Global exclusive monitor.
Type: PVBusExclusiveMonitor.

fvp_mps2.exclusive_monitor_psram_iotss.bus_mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss
Allow transactions to be routed arbitrarily.
Type: PVBusRouter.

fvp_mps2.exclusive_monitor_switch_extra_psram_iotss.mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2
Allow transactions to be routed arbitrarily.
Type: PVBusRouter.

fvp_mps2.exclusive_monitor_switch_extra_psram_mps2.mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_zbtsram1
Global exclusive monitor.
Type: PVBusExclusiveMonitor.

fvp_mps2.exclusive_monitor_zbtsram1.bus_mapper
Type: PVBusMapper.

fvp_mps2.exclusive_monitor_zbtsram2
Global exclusive monitor.
Type: PVBusExclusiveMonitor.

fvp_mps2.exclusive_monitor_zbtsram2.bus_mapper
Type: PVBusMapper.

fvp_mps2.exclusive_squasher
Squashes the exclusive attribute on bus transactions.
Type: PVBusExclusiveSquasher.

fvp_mps2.exclusive_squasher.bus_modifier
Type: PVBusMapper.

fvp_mps2.fpga_sysctrl

FPGA SysCtrl timers LEDs and switches.

Type: [FPGA_SysCtrl](#).

fvp_mps2.fpga_sysctrl.callBack100HzCounter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.fpga_sysctrl.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.fpga_sysctrl.pvbuslave

Type: [PVBUSlave](#).

fvp_mps2.gpio_0_or_2

Or Gate.

Type: [OrGate](#).

fvp_mps2.gpio_1_or_3

Or Gate.

Type: [OrGate](#).

fvp_mps2.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

fvp_mps2.mem_switch_extra_psram_iotss

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

fvp_mps2.mem_switch_extra_psram_iotss.mapper

Type: [PVBUSMapper](#).

fvp_mps2.mem_switch_extra_psram_mps2

Allow transactions to be routed arbitrarily.

Type: [PVBUSRouter](#).

fvp_mps2.mem_switch_extra_psram_mps2.mapper

Type: [PVBUSMapper](#).

fvp_mps2.mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram1.bus_mapper

Type: [PVBUSMapper](#).

fvp_mps2.mpc_iotss_ssram1.busslave

Type: [PVBUSSlave](#).

fvp_mps2.mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mpc_iotss_ssram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.mpc_iotss_ssram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mpc_iotss_ssram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.mpc_iotss_ssram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_audio

MPS2 Audio.

Type: [MPS2_Audio](#).

fvp_mps2.mps2_audio.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.mps2_cmsdk_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.mps2_cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_exclusive_monitor_zbtsram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.mps2_exclusive_monitor_zbtsram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_lcd

MPS2 LCD I2C interface.

Type: MPS2_LCD.

fvp_mps2.mps2_mpc_iotss_ssram1

IoT Subsystem Memory Protection Controller.

Type: IoTSS_MemoryProtectionController.

fvp_mps2.mps2_mpc_iotss_ssram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.mps2_mpc_iotss_ssram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.mps2_mpc_iotss_ssram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.mps2_secure_control_register_block

MPS2 Secure Control Register Block.

Type: `MPS2_SecureCtrl`.

fvp_mps2.mps2_secure_control_register_block.bus_mapper

Type: `PVBusMapper`.

fvp_mps2.mps2_secure_control_register_block.busslave_ns_iot

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_ns_mps2

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_s_iot

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.busslave_s_mps2

Type: `PVBusSlave`.

fvp_mps2.mps2_secure_control_register_block.idau_busmaster

Type: `PVBusMaster`.

fvp_mps2.mps2_timer0

ARM Timer Module.

Type: `CMSDK_Timer`.

fvp_mps2.mps2_timer0.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_timer0.counter

Internal component used by SP804 Timer module.

Type: `CounterModule`.

fvp_mps2.mps2_timer1

ARM Timer Module.

Type: `CMSDK_Timer`.

fvp_mps2.mps2_timer1.busslave

Type: `PVBusSlave`.

fvp_mps2.mps2_timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

fvp_mps2.mps2_timer1.counter

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.mps2_visualisation

Display window for MPS2 using Visualisation library.

Type: MPS2_Visualisation.

fvp_mps2.niden_or_gate

Or Gate.

Type: OrGate.

fvp_mps2.nmi_or_gate

Or Gate.

Type: OrGate.

fvp_mps2.pl022_ssp_mps2

ARM PrimeCell Synchronous Serial Port(PL022).

Type: PL022_SSP_MPS2.

fvp_mps2.pl022_ssp_mps2.busslave

Type: PVBUSSlave.

fvp_mps2.pl022_ssp_mps2.prescaler

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.platform_bus_switch

Allow transactions to be routed arbitrarily.

Type: PVBUSRouter.

fvp_mps2.platform_bus_switch.mapper

Type: PVBUSMapper.

fvp_mps2.platform_switch_dma0

Allow transactions to be routed arbitrarily.

Type: PVBUSRouter.

fvp_mps2.platform_switch_dma0.mapper

Type: PVBUSMapper.

fvp_mps2.platform_switch_dma1

Allow transactions to be routed arbitrarily.

Type: PVBUSRouter.

fvp_mps2.platform_switch_dma1.mapper

Type: PVBUSMapper.

fvp_mps2.signal_router

Signal router.

Type: SignalRouter.

fvp_mps2.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

fvp_mps2.smc_91c111.SMC_slave

Type: [PVBusSlave](#).

fvp_mps2.spiden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.spniden_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200

SSE-200 subsystem.

Type: [SSE200](#).

fvp_mps2.sse200.acg_cpu0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_cpu1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_cpu1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram0

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram1

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram2

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.acg_sram3

IoT Subsystem Access Control Gate.

Type: [IoTSS_AccessControlGate](#).

fvp_mps2.sse200.acg_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0

IoT Subsystem Peripheral Protection Controller.

Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper0

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper1

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper10

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper11

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper12

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper13

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper14

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper15

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper2

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper3

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper4

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper5

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper6

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper7

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper8

Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem0.bus_mapper9
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1
IoT Subsystem Peripheral Protection Controller.
Type: [IoTSS_PeripheralProtectionController](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper0
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper1
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper10
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper11
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper12
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper13
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper14
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper15
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper2
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper3
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper4
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper5
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper6
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper7
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper8
Type: [PVBusMapper](#).

fvp_mps2.sse200.apb_ppc_iotss_subsystem1.bus_mapper9
Type: [PVBusMapper](#).

fvp_mps2.sse200.clock32kHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.sse200.cmsdk_dualtimer.busslave

Type: [PVBUSSlave](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cmsdk_dualtimer.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.cordio_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cordio_ppu.busslave

Type: [PVBUSSlave](#).

fvp_mps2.sse200.cpu0core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu0core_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu0dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu0dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu1core_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu1core_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.cpu1dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.cpu1dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.crypto_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.crypto_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.dbg_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.dbg_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

fvp_mps2.sse200.exclusive_monitor_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.exclusive_squasher

Squashes the exclusive attribute on bus transactions.

Type: [PVBusExclusiveSquasher](#).

fvp_mps2.sse200.exclusive_squasher.bus_modifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller

Type: [LabellerIdauSecurity](#).

fvp_mps2.sse200.idau_labeller.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.idau_labeller.pvbusmodifier

Type: [PVBusMapper](#).

fvp_mps2.sse200.idau_labeller.remap_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.internal_msniper_tcm

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.internal_msniper_tcm.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_cpuidentity

IoT Subsystem CPU_IDENTITY registers.

Type: [IoTSS_CPUIdentity](#).

fvp_mps2.sse200.iotss_cpuidentity.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram1.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_internal_sram3

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.sse200.iotss_internal_sram3.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systemcontrol

IoT Subsystem System Control registers.

Type: [IoTSS_SystemControl](#).

fvp_mps2.sse200.iotss_systemcontrol.busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.iotss_systemcontrol.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.iotss_systeminfo

IoT Subsystem System Information registers.

Type: [IoTSS_SystemInfo](#).

fvp_mps2.sse200.iotss_systeminfo.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_msniper_tcm.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_internal_sram_mpc.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mem_switch_ppu

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.sse200.mem_switch_ppu.mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mhu0

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mhu1

IoT Subsystem Message Handling Unit.

Type: [IoTSS_MessageHandlingUnit](#).

fvp_mps2.sse200.mhu1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram0.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram1.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram2.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3

IoT Subsystem Memory Protection Controller.

Type: [IoTSS_MemoryProtectionController](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.mpc_iotss_internal_sram3.gating_disabled_thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

fvp_mps2.sse200.nmi_or_gate

Or Gate.

Type: [OrGate](#).

fvp_mps2.sse200.nonsecure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.nonsecure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram0_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram0_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram1_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram1_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram2_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram2_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.ram3_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.ram3_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.s32k_timer.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.s32k_timer.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.s32k_timer.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.s32k_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.s32k_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block

MPS2 Secure Control Register Block.

Type: [MPS2_SecureCtrl](#).

fvp_mps2.sse200.secure_control_register_block.bus_mapper

Type: [PVBusMapper](#).

fvp_mps2.sse200.secure_control_register_block.busslave_ns_iod

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_ns_mps2

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_s_iod

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.busslave_s_mps2

Type: [PVBusSlave](#).

fvp_mps2.sse200.secure_control_register_block.idau_busmaster

Type: [PVBusMaster](#).

fvp_mps2.sse200.secure_watchdog

ARM Watchdog Module.

Type: [CMSDK_Watchdog](#).

fvp_mps2.sse200.secure_watchdog.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.signal_router

Signal router.

Type: [SignalRouter](#).

fvp_mps2.sse200.sys_ppu

ARM Power Policy Unit (PPU) architectural model.

Type: [PPUv0](#).

fvp_mps2.sse200.sys_ppu.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.timer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer0.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.timer0.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.sse200.timer1

ARM Timer Module.

Type: [CMSDK_Timer](#).

fvp_mps2.sse200.timer1.busslave

Type: [PVBusSlave](#).

fvp_mps2.sse200.timer1.clk_div

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.sse200.timer1.counter

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.ssram1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.ssram1.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.ssram2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.ssram2.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub0.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub1.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub_i2c1

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_i2c1.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub_i2s

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_i2s.bus_slave

Type: [PVBUSSlave](#).

fvp_mps2.stub_spi0

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_spi0.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.stub_spi2

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

fvp_mps2.stub_spi2.bus_slave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer

Type: [SVOS_DualTimer](#).

fvp_mps2.svos_dualtimer.busmaster0

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster1

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster2

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busmaster3

Type: [PVBusMaster](#).

fvp_mps2.svos_dualtimer.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0

ARM Dual-Timer Module.

Type: [CMSDK_DualTimer](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

fvp_mps2.svos_dualtimer.svos_dualtimer0.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer1.busslave

Type: PVBusSlave.

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer2.busslave

Type: PVBusSlave.

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: ClockDivider.

fvp_mps2.svos_dualtimer.svos_dualtimer2.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer2.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3

ARM Dual-Timer Module.

Type: CMSDK_DualTimer.

fvp_mps2.svos_dualtimer.svos_dualtimer3.busslave

Type: [PVBusSlave](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.svos_dualtimer.svos_dualtimer3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

fvp_mps2.switch_PSRAM_M7

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_PSRAM_M7.mapper

Type: [PVBusMapper](#).

fvp_mps2.switch_svos_dualtimer

Allow transactions to be routed arbitrarily.

Type: [PVBusRouter](#).

fvp_mps2.switch_svos_dualtimer.mapper

Type: [PVBusMapper](#).

fvp_mps2.telnetterminal0

Telnet terminal interface.

Type: [TelnetTerminal](#).

fvp_mps2.telnetterminal1

Telnet terminal interface.

Type: [TelnetTerminal](#).

fvp_mps2.telnetterminal2

Telnet terminal interface.

Type: [TelnetTerminal](#).

fvp_mps2.touchscreen_interface

MPS2 Touch Screen.

Type: [MPS2_TouchScreen](#).

fvp_mps2.touchscreen_interface.pvbusslave

Type: [PVBusSlave](#).

fvp_mps2.uart_overflows_or_gate

Or Gate.

Type: [OrGate](#).

idau.bus_bridge

Bridge incoming transactions to a PVDevice port.

Type: [PVBusBridge](#).

PRE-1121-V1.0

Product and document information

Read the information in these sections to understand the release status of the product and documentation, and the conventions used in the Arm documents.

Product status

All products and Services provided by Arm require deliverables to be prepared and made available at different levels of completeness. The information in this document indicates the appropriate level of completeness for the associated deliverables.

Product completeness status

The information in this document is Final, that is for a developed product.

Revision history

These sections can help you understand how the document has changed over time.

Document release information

The Document history table gives the issue number and the released date for each released issue of this document.

Document history

Issue	Date	Confidentiality	Change
1126-00	19 June 2024	Non-Confidential	Update for v11.26.
1125-00	13 March 2024	Non-Confidential	Update for v11.25.
1124-00	6 December 2023	Non-Confidential	Update for v11.24.
1123-00	13 September 2023	Non-Confidential	Update for v11.23.
1122-00	14 June 2023	Non-Confidential	Update for v11.22.
1121-00	22 March 2023	Non-Confidential	Update for v11.21.

Issue	Date	Confidentiality	Change
1120-00	7 December 2022	Non-Confidential	Update for v11.20.
1119-00	14 September 2022	Non-Confidential	Update for v11.19.
1118-01	26 August 2022	Non-Confidential	Update for Arm Corstone SSE-310 FVP.
1118-00	15 June 2022	Non-Confidential	Update for v11.18.
1117-00	16 February 2022	Non-Confidential	Update for v11.17.
1116-00	6 October 2021	Non-Confidential	Update for v11.16.
1115-00	29 June 2021	Non-Confidential	Update for v11.15.
1114-01	14 April 2021	Non-Confidential	Update for FVP_Base_AEMv8R.
1114-00	17 March 2021	Non-Confidential	Update for v11.14.
1113-00	9 December 2020	Non-Confidential	Update for v11.13.
1112-00	22 September 2020	Non-Confidential	Update for v11.12.
1111-00	9 June 2020	Non-Confidential	Update for v11.11.
1110-00	12 March 2020	Non-Confidential	Update for v11.10.
1109-00	28 November 2019	Non-Confidential	Update for v11.9.
1108-01	3 October 2019	Non-Confidential	Update for v11.8.1.
1108-00	5 September 2019	Non-Confidential	Update for v11.8.
1107-00	17 May 2019	Non-Confidential	Update for v11.7.

Issue	Date	Confidentiality	Change
1106-00	26 February 2019	Non-Confidential	Update for v11.6.
1105-00	23 November 2018	Non-Confidential	Update for v11.5.
1104-01	17 August 2018	Non-Confidential	Update for v11.4.2.
1104-00	22 June 2018	Non-Confidential	Update for v11.4.
1103-00	23 February 2018	Non-Confidential	Update for v11.3.
1102-00	17 November 2017	Non-Confidential	Update for v11.2.
1101-00	31 August 2017	Non-Confidential	Update for v11.1.
1100-00	31 May 2017	Non-Confidential	Update for v11.0. Document numbering scheme has changed.

For technical changes to this documentation, see the [Fast Models Release Notes](#).

Conventions

The following subsections describe conventions used in Arm documents.

Glossary

The Arm Glossary is a list of terms used in Arm documentation, together with definitions for those terms. The Arm Glossary does not contain terms that are industry standard unless the Arm meaning differs from the generally accepted meaning.

See the Arm Glossary for more information: developer.arm.com/glossary.

Typographic conventions

Arm documentation uses typographical conventions to convey specific meaning.

Convention	Use
<i>italic</i>	Citations.
bold	Interface elements, such as menu names. Terms in descriptive lists, where appropriate.
monospace	Text that you can enter at the keyboard, such as commands, file and program names, and source code.

Convention	Use
monospace <u>underline</u>	A permitted abbreviation for a command or option. You can enter the underlined text instead of the full command or option name.
<and>	Encloses replaceable terms for assembler syntax where they appear in code or code fragments. For example: <pre>MRC p15, 0, <Rd>, <CRn>, <CRm>, <Opcode_2></pre>
SMALL CAPITALS	Terms that have specific technical meanings as defined in the <i>Arm® Glossary</i> . For example, IMPLEMENTATION DEFINED , IMPLEMENTATION SPECIFIC , UNKNOWN , and UNPREDICTABLE .

We recommend the following. If you do not follow these recommendations your system might not work.

Your system requires the following. If you do not follow these requirements your system will not work.

You are at risk of causing permanent damage to your system or your equipment, or of harming yourself.

This information is important and needs your attention.

This information might help you perform a task in an easier, better, or faster way.

This information reminds you of something important relating to the current content.

Useful resources

This document contains information that is specific to this product. See the following resources for other useful information.

Access to Arm documents depends on their confidentiality:

- Non-Confidential documents are available at developer.arm.com/documentation. Each document link in the following tables goes to the online version of the document.
- Confidential documents are available to licensees only through the product package.

Table 1: Arm publications

Document name	Document ID	Licensee only
Arm® Architecture Models	-	No
