Type: [PL370_HDLCD](#).**bp.hdlcd0.busmaster**Type: [PVBusMaster](#).**bp.hdlcd0.busslave**Type: [PVBusSlave](#).**bp.hdlcd0.timer**

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke

wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBusSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBusSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBusSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl1111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.r1_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave
Type: [PVBusSlave](#).

bp.rt_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.rt_dram.bus_slave
Type: [PVBusSlave](#).

bp.s_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.s_dram.bus_slave
Type: [PVBusSlave](#).

bp.secureDRAM
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.secureDRAM.bus_slave
Type: [PVBusSlave](#).

bp.secureSRAM
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.secureSRAM.bus_slave
Type: [PVBusSlave](#).

bp.secureSRAM_limiter
Type: [PVBusMapper](#).

bp.secureflash
Intel Strata Flash J3 LISA+ model.
Type: [IntelStrataFlashJ3](#).

bp.secureflash.map
Type: [PVBusMapper](#).

bp.secureflash.mbs
Type: [PVBusSlave](#).

bp.secureflash.rmbs
Type: [PVBusSlave](#).

bp.secureflashloader
A device that can preload a gzipped image into flash at startup.
Type: [FlashLoader](#).

bp.smisc_91c111
SMSC 91C111 ethernet controller.
Type: [SMSC_91C111](#).

bp.smsc_91c111.SMSC slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBusSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0
Type: `filter0`.

bp.tzc_400.filter0.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter1
Type: `filter1`.

bp.tzc_400.filter1.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifierType: [PVBusMapper](#).**bp.virtio_rng**

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).**bp.virtio_rng.dma_master**Type: [PVBusMaster](#).**bp.virtio_blockdevice**

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).**bp.virtio_blockdevice.dma_master**Type: [PVBusMaster](#).**bp.virtio_blockdevice_labeller**Type: [Labeller](#).**bp.virtio_blockdevice_labeller.pvbusmodifier**Type: [PVBusMapper](#).**bp.virtio_p9device**

virtio P9 server.

Type: [VirtioP9Device](#).**bp.virtio_p9device.mmio_slave**Type: [PVBusSlave](#).**bp.virtio_p9device.virtio_master**Type: [PVBusMaster](#).**bp.virtio_p9device_labeller**Type: [Labeller](#).**bp.virtio_p9device_labeller.pvbusmodifier**Type: [PVBusMapper](#).**bp.vis**

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).**bp.vis.recorder**

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).**bp.vis.recorder.playbackDivider**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-A72 Cluster CT model.

Type: [Cluster_ARM_Cortex-A72](#).

cluster0.AMU

Type: [PVBUSLogger](#).

cluster0.AMU.mapper

Type: [PVBUSMapper](#).

Base Platforms Power Controller.

Type: [Base_PowerController](#).**pctl.busslave**Type: [PVBusSlave](#).**pctl.timer_reset**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smsc_91c111.SMSC slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

bp.sp810_sysctrl.busslave

Type: `PVBusSlave`.

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.sram.bus_slave

Type: `PVBusSlave`.

bp.terminal_0

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_1

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_2

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [Tzc_400](#).

bp.tzc_400.apbslave[0]

Type: [PvBusSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PvBusMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PvBusMapper](#).

bp.tzc_400.filter2

Type: [filter2](#).

bp.tzc_400.filter2.BusMapper

Type: [PvBusMapper](#).

bp.tzc_400.filter3

Type: [filter3](#).

bp.tzc_400.filter3.BusMapper

Type: [PvBusMapper](#).

bp.utility_bus_map0

Type: [PvBusMapper](#).

bp.utility_bus_map1

Type: [PvBusMapper](#).

bp.utility_bus_map2

Type: [PvBusMapper](#).

bp.utility_bus_map3

Type: [PvBusMapper](#).

bp.ve_sysregs

Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave

Type: [PvBusSlave](#).

bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

bp.virtio_net

VirtioNet device over MMIO transport.

Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master

Type: `PVBusMaster`.

bp.virtio_net_labeller

Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

bp.virtio_rng.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtio_blockdevice.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice_labeller

Type: `Labeller`.

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtio_p9device.mmio_slave

Type: `PVBusSlave`.

bp.virtio_p9device.virtio_master

Type: `PVBusMaster`.

bp.virtio_p9device_labeller

Type: `Labeller`.

bp.virtio_p9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.vis.recorder.playbackTimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.vis.recorder.recordingDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-A72 Cluster CT model.

Type: [cluster_ARM_Cortex-A72](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

cluster0.DAP

Type: [PVBusLogger](#).

cluster0.DAP.mapper

Type: [PVBusMapper](#).

cluster0.DSU

Type: [DSU](#).

cluster0.DSU.mpam_busslave

Type: [PVBusSlave](#).

cluster0.MMAP

Type: [PVBusLogger](#).

cluster0.MMAP.mapper

Type: [PVBusMapper](#).

cluster0.acp_mapper

Type: [PVBusMapper](#).

cluster0.cpu0

ARM Cortex-A72 CT model.

Type: [ARM_Cortex-A72](#).

cluster0.cpu0.UTLB

Type: [TLB](#).

cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [Tlbcadi](#).

cluster0.cpu0.gicv3_cpu_if

Type: [GICv3CPUInterface](#).

cluster0.cpu0.l1dcache

PV Cache.

Type: `PVCache`.

`cluster0.cpu0.l1dcache.upstream[0]`
Type: `PVBusSlave`.

`cluster0.cpu0.l1icache`
PV Cache.
Type: `PVCache`.

`cluster0.cpu0.l1icache.upstream[0]`

ELF loader component.

Type: [ElfLoader](#).**elfloader.pvbus_busmaster**Type: [PVBusMaster](#).**gic_distributor**

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).**gic_distributor.rd_0**Type: [GICv3RedistributorInternal](#).**gic_distributor.rd_0_0**Type: [GICv3RedistributorInternal](#).**gic_distributor.rd_0_0_0**Type: [GICv3RedistributorInternal](#).**gic_distributor.rd_0_0_0_0**Type: [GICv3Redistributor](#).**gic_distributor.rd_0_0_1**Type: [GICv3RedistributorInternal](#).**gic_distributor.rd_0_0_1_0**Type: [GICv3Redistributor](#).**gic_distributor.rd_tl**Type: [GICv3Distributor](#).**pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).**pctl.busslave**Type: [PVBusSlave](#).**pctl.timer_reset**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

pctl.utility_bus3

Type: [PVBusMaster](#).

12.38 FVP_Base_Cortex-A72x2

List of instances in FVP_Base_Cortex-A72x2.

FVP_Base_Cortex-A72x2 instances

address_map_terminator

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBUSSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk
ARM Generic Timer.
Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase1
Type: [PVBUSSlave](#).

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase8
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase9
Type: [PVBUSSlave](#).

bp.ap_refclk.busctlbase
Type: [PVBUSSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.sm91c111.SMSC slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

bp.sp810_sysctrl.busslave

Type: `PVBusSlave`.

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.sram.bus_slave

Type: `PVBusSlave`.

bp.terminal_0

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_1

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_2

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [Tzc_400](#).

bp.tzc_400.apbslave[0]

Type: [PvBusSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PvBusMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PvBusMapper](#).

bp.tzc_400.filter2

Type: [filter2](#).

bp.tzc_400.filter2.BusMapper

Type: [PvBusMapper](#).

bp.tzc_400.filter3

Type: [filter3](#).

bp.tzc_400.filter3.BusMapper

Type: [PvBusMapper](#).

bp.utility_bus_map0

Type: [PvBusMapper](#).

bp.utility_bus_map1

Type: [PvBusMapper](#).

bp.utility_bus_map2

Type: [PvBusMapper](#).

bp.utility_bus_map3

Type: [PvBusMapper](#).

bp.ve_sysregs

Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave

Type: [PvBusSlave](#).

bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

bp.virtio_net

VirtioNet device over MMIO transport.

Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master

Type: `PVBusMaster`.

bp.virtio_net_labeller

Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

bp.virtio_rng.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtio_blockdevice.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice_labeller

Type: `Labeller`.

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtio_p9device.mmio_slave

Type: `PVBusSlave`.

bp.virtio_p9device.virtio_master

Type: `PVBusMaster`.

bp.virtio_p9device_labeller

Type: `Labeller`.

bp.virtio_p9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.vis.recorder.playbackTimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.vis.recorder.recordingDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-A72 Cluster CT model.

Type: `Cluster_ARM_Cortex-A72`.**cluster0.AMU**Type: `PVBusLogger`.**cluster0.AMU.mapper**Type: `PVBusMapper`.**cluster0.DAP**Type: `PVBusLogger`.**cluster0.DAP.mapper**Type: `PVBusMapper`.**cluster0.DSU**Type: `DSU`.**cluster0.DSU.mpam_busslave**Type: `PVBusSlave`.**cluster0.MMAP**Type: `PVBusLogger`.**cluster0.MMAP.mapper**Type: `PVBusMapper`.**cluster0.acp_mapper**Type: `PVBusMapper`.**cluster0.cpu0**

ARM Cortex-A72 CT model.

Type: `ARM_Cortex-A72`.**cluster0.cpu0.UTLB**Type: `TLB`.**cluster0.cpu0.dtlb**

TLB - instruction, data or unified.

Type: `TlbCadi`.**cluster0.cpu0.gicv3_cpu_if**Type: `GICv3CPUInterface`.**cluster0.cpu0.l1dcache**

PV Cache.

Type: `PVCache`.**cluster0.cpu0.l1dcache.upstream[0]**Type: `PVBusSlave`.**cluster0.cpu0.l1icache**

PV Cache.

Type: `PVCache`.

cluster0.cpu0.l1icache.upstream[0]

Type: [PVBusSlave](#).

Type: [GICv3Distributor](#).

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

pctl.busslave

Type: [PVBusSlave](#).

pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBusSlave](#).

bp.ap_refclk.busbase1

Type: [PVBusSlave](#).

bp.ap_refclk.busbase10

Type: [PVBusSlave](#).

bp.ap_refclk.busbase11

Type: [PVBusSlave](#).

bp.ap_refclk.busbase12

Type: [PVBusSlave](#).

bp.ap_refclk.busbase13

Type: [PVBusSlave](#).

bp.ap_refclk.busbase14

Type: [PVBusSlave](#).

bp.ap_refclk.busbase15

Type: [PVBusSlave](#).

bp.ap_refclk.busbase2

Type: [PVBusSlave](#).

bp.ap_refclk.busbase3

Type: [PVBusSlave](#).

bp.ap_refclk.busbase4

Type: [PVBusSlave](#).

bp.ap_refclk.busbase5

Type: [PVBusSlave](#).

bp.ap_refclk.busbase6

Type: [PVBusSlave](#).

bp.ap_refclk.busbase7

Type: [PVBusSlave](#).

bp.ap_refclk.busbase8

Type: [PVBusSlave](#).

bp.ap_refclk.busbase9

Type: [PVBusSlave](#).

bp.ap_refclk.buscctlbase

Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBUSMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke

wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl1111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.r1_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave
Type: [PVBusSlave](#).

bp.rt_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.rt_dram.bus_slave
Type: [PVBusSlave](#).

bp.s_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.s_dram.bus_slave
Type: [PVBusSlave](#).

bp.secureDRAM
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.secureDRAM.bus_slave
Type: [PVBusSlave](#).

bp.secureSRAM
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.secureSRAM.bus_slave
Type: [PVBusSlave](#).

bp.secureSRAM_limiter
Type: [PVBusMapper](#).

bp.secureflash
Intel Strata Flash J3 LISA+ model.
Type: [IntelStrataFlashJ3](#).

bp.secureflash.map
Type: [PVBusMapper](#).

bp.secureflash.mbs
Type: [PVBusSlave](#).

bp.secureflash.rmbs
Type: [PVBusSlave](#).

bp.secureflashloader
A device that can preload a gzipped image into flash at startup.
Type: [FlashLoader](#).

bp.smisc_91c111
SMSC 91C111 ethernet controller.
Type: [SMSC_91C111](#).

bp.smsc_91c111.SMSC slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBusSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: `NonVolatileCounter`.

bp.trusted_nv_counter.pvbuslave

Type: `PVBusSlave`.

bp.trusted_rng

Random Number Generator unit.

Type: `RandomNumberGenerator`.

bp.trusted_rng.pvbuslave

Type: `PVBusSlave`.

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: `SP805_Watchdog`.

bp.trusted_watchdog.busslave

Type: `PVBusSlave`.

bp.trusted_watchdog.clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.trusted_watchdog.clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.tzc_400

TrustZone Address Space Controller.

Type: `TZC_400`.

bp.tzc_400.apbslave[0]

Type: `PVBusSlave`.

bp.tzc_400.filter0
Type: `filter0`.

bp.tzc_400.filter0.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter1
Type: `filter1`.

bp.tzc_400.filter1.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

bp.virtio_rng.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).

bp.virtio_blockdevice.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice_labeller

Type: [Labeller](#).

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

bp.virtio_p9device.mmio_slave

Type: [PVBusSlave](#).

bp.virtio_p9device.virtio_master

Type: [PVBusMaster](#).

bp.virtio_p9device_labeller

Type: [Labeller](#).

bp.virtio_p9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-A72 Cluster CT model.

Type: [Cluster_ARM_Cortex-A72](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBUSSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase1
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase10
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase11
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase12
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase13
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase14
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase15
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase2
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase3
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase4
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase5
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase6
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase7
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase8
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase9
Type: [PVBUSSlave](#).

bp.ap_refclk.busctlbase
Type: [PVBUSSlave](#).

bp.audioout
SDL based Audio Output for PL041_AACI.
Type: [AudioOut_SDL](#).

bp.clock100Hz
A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.coresight_modifier

Type: `PVBusMapper`.

bp.dmc

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.dmc.bus_slave

Type: `PVBusSlave`.

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.dmc_phy.bus_slave

Type: `PVBusSlave`.

bp.dram_limiter

Type: `PVBusMapper`.

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.dummy_local_dap_rom.bus_slave

Type: `PVBusSlave`.

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.dummy_ram.bus_slave

Type: `PVBusSlave`.

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.dummy_usb.bus_slave

Type: `PVBusSlave`.

bp.exclusive_monitor

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

bp.exclusive_monitor.bus_mapper

Type: `PVBusMapper`.

bp.fixed_security_map

Type: `PVBusMapper`.

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: `IntelStrataFlashJ3`.

bp.flash0.map

Type: `PVBusMapper`.

bp.flash0.mbs

Type: `PVBusSlave`.

bp.flash0.rmbs

Type: `PVBusSlave`.

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: `IntelStrataFlashJ3`.

bp.flash1.map

Type: `PVBusMapper`.

bp.flash1.mbs

Type: `PVBusSlave`.

bp.flash1.rmbs

Type: `PVBusSlave`.

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: `FlashLoader`.

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: `FlashLoader`.

bp.generic_watchdog

ARM Generic Watchdog.

Type: `MemoryMappedGenericWatchdog`.

bp.generic_watchdog.busctlbase

Type: `PVBusSlave`.

bp.generic_watchdog.busrefbase

Type: `PVBusSlave`.

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: `PL370_HDLCD`.

bp.hdlcd0.busmaster

Type: `PVBusMaster`.

bp.hdlcd0.busslave

Type: `PVBusSlave`.

bp.hdlcd0.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()`

callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbuslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly

or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

`bp.mmc.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`bp.mmc.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`bp.mmc.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`bp.mpe`

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: `PVMemoryProtectionEngine`.

`bp.mpe.mapper`

Type: `PVBusMapper`.

`bp.nontrustedrom`

Intel Strata Flash J3 LISA+ model.

Type: `IntelStrataFlashJ3`.

`bp.nontrustedrom.map`

Type: `PVBusMapper`.

`bp.nontrustedrom.mbs`

Type: `PVBusSlave`.

`bp.nontrustedrom.rmbs`

Type: `PVBusSlave`.

`bp.nontrustedromloader`

A device that can preload a gzipped image into flash at startup.

Type: `FlashLoader`.

`bp.ns_dram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBusSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBusSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).**bp.rl_dram**

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).**bp.rl_dram.bus_slave**Type: [PVBusSlave](#).**bp.rt_dram**

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).**bp.rt_dram.bus_slave**Type: [PVBusSlave](#).**bp.s_dram**

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).**bp.s_dram.bus_slave**Type: [PVBusSlave](#).**bp.secureDRAM**

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).**bp.secureDRAM.bus_slave**Type: [PVBusSlave](#).**bp.secureSRAM**

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).**bp.secureSRAM.bus_slave**Type: [PVBusSlave](#).**bp.secureSRAM_limiter**Type: [PVBusMapper](#).**bp.secureflash**

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).**bp.secureflash.map**Type: [PVBusMapper](#).**bp.secureflash.mbs**Type: [PVBusSlave](#).**bp.secureflash.rmbs**Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smsc_91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBusSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBusSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TzC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0

Type: filter0.

bp.tzc_400.filter0.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter1

Type: filter1.

bp.tzc_400.filter1.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter2

Type: filter2.

bp.tzc_400.filter2.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter3

Type: filter3.

bp.tzc_400.filter3.BusMapper

Type: [PVBusMapper](#).

bp.utility_bus_map0

Type: [PVBusMapper](#).

bp.utility_bus_map1

Type: [PVBusMapper](#).

bp.utility_bus_map2

Type: [PVBusMapper](#).

bp.utility_bus_map3

Type: [PVBusMapper](#).

bp.ve_sysregs

Type: [VE_SysRegs](#).

bp.ve_sysregs.busslave

Type: [PVBusSlave](#).

bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

bp.virtio_net

VirtioNet device over MMIO transport.

Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master

Type: `PVBusMaster`.

bp.virtio_net_labeller

Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

bp.virtio_rng.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtio_blockdevice.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice_labeller

Type: `Labeller`.

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtio_p9device.mmio_slave

Type: `PVBusSlave`.

bp.virtio_p9device.virtio_master

Type: `PVBusMaster`.

bp.virtio_p9device_labeller

Type: `Labeller`.

bp.virtio_p9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.vis.recorder.playbackTimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.vis.recorder.recordingDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-A72 Cluster CT model.

Type: `Cluster_ARM_Cortex-A72`.**cluster0.AMU**Type: `PVBusLogger`.**cluster0.AMU.mapper**Type: `PVBusMapper`.**cluster0.DAP**Type: `PVBusLogger`.**cluster0.DAP.mapper**Type: `PVBusMapper`.**cluster0.DSU**Type: `DSU`.**cluster0.DSU.mpam_busslave**Type: `PVBusSlave`.**cluster0.MMAP**Type: `PVBusLogger`.**cluster0.MMAP.mapper**Type: `PVBusMapper`.**cluster0.acp_mapper**Type: `PVBusMapper`.**cluster0.cpu0**

ARM Cortex-A72 CT model.

Type: `ARM_Cortex-A72`.**cluster0.cpu0.UTLB**Type: `TLB`.**cluster0.cpu0.dtlb**

TLB - instruction, data or unified.

Type: `TlbCadi`.**cluster0.cpu0.gicv3_cpu_if**Type: `GICv3CPUInterface`.**cluster0.cpu0.l1dcache**

PV Cache.

Type: `PVCache`.**cluster0.cpu0.l1dcache.upstream[0]**Type: `PVBusSlave`.**cluster0.cpu0.l1icache**

PV Cache.

Type: `PVCache`.

cluster0.cpu0.l1icache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu1

ARM Cortex-A72 CT model.

Type: [ARM_Cortex-A72](#).

cluster0.cpu1.UTLB

Type: TLB.

cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

address_map_terminator

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBUSSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk
ARM Generic Timer.
Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smsc_91c111.SMSC slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

bp.sp810_sysctrl.busslave

Type: `PVBusSlave`.

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.sram.bus_slave

Type: `PVBusSlave`.

bp.terminal_0

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_1

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_2

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [Tzc_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter2

Type: [filter2](#).

bp.tzc_400.filter2.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter3

Type: [filter3](#).

bp.tzc_400.filter3.BusMapper

Type: [PVBusMapper](#).

bp.utility_bus_map0

Type: [PVBusMapper](#).

bp.utility_bus_map1

Type: [PVBusMapper](#).

bp.utility_bus_map2

Type: [PVBusMapper](#).

bp.utility_bus_map3

Type: [PVBusMapper](#).

bp.ve_sysregs

Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave

Type: [PVBusSlave](#).

bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

bp.virtio_net

VirtioNet device over MMIO transport.

Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master

Type: `PVBusMaster`.

bp.virtio_net_labeller

Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

bp.virtio_rng.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtio_blockdevice.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice_labeller

Type: `Labeller`.

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtio_p9device.mmio_slave

Type: `PVBusSlave`.

bp.virtio_p9device.virtio_master

Type: `PVBusMaster`.

bp.virtio_p9device_labeller

Type: `Labeller`.

bp.virtio_p9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.vis.recorder.playbackTimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.vis.recorder.recordingDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-A72 Cluster CT model.

Type: [cluster_ARM_Cortex-A72](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

cluster0.DAP

Type: [PVBusLogger](#).

cluster0.DAP.mapper

Type: [PVBusMapper](#).

Type: [PVBusMapper](#).

cluster0.acp_mapper

Type: [PVBusMapper](#).

cluster0.cpu0

ARM Cortex-A72 CT model.

Type: [ARM_Cortex-A72](#).

cluster0.cpu0.UTLB

Type: [TLB](#).

cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [Tlbcadi](#).

cluster0.cpu0.gicv3_cpu_if

Type: [GICv3CPUInterface](#).

cluster0.cpu0.l1dcache

PV Cache.

Type: `PVCache`.

cluster0.cpu0.l1dcache.upstream[0]

Type: `PVBusSlave`.

cluster0.cpu0.l1icache

PV Cache.

Type: `PVCache`.

cluster0.cpu0.l1icache.upstream[0]

Type: `PVBusSlave`.

cluster0.cpu1

ARM Cortex-A72 CT model.

Type: `ARM_Cortex-A72`.

cluster0.cpu1.UTLB

Type: `TLB`.

cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: `Tlbcadi`.

cluster0.cpu1.gicv3_cpu_if

Type: `GICv3CPUInterface`.

cluster0.cpu1.l1dcache

PV Cache.

Type: `PVCache`.

cluster0.cpu1.l1dcache.upstream[0]

Type: `PVBusSlave`.

cluster0.cpu1.l1icache

PV Cache.

Type: `PVCache`.

gic_distributor.rd_tl

Type: `GICv3Distributor`.

pctl

Base Platforms Power Controller.

Type: `Base_PowerController`.

pctl.busslave

Type: `PVBusSlave`.

pctl.timer_reset

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

pctl.timer_reset.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

pctl.timer_reset.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

pctl.timer_reset.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

pctl.utility_bus0

Type: `PVBusMaster`.

pctl.utility_bus1

Type: `PVBusMaster`.

pctl.utility_bus2

Type: `PVBusMaster`.

pctl.utility_bus3

Type: `PVBusMaster`.

12.42 FVP_Base_Cortex-A73x1

List of instances in FVP_Base_Cortex-A73x1.

FVP_Base_Cortex-A73x1 instances

address_map_terminator

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBusSlave](#).

bp.ap_refclk.busbase1

Type: [PVBusSlave](#).

bp.ap_refclk.busbase10

Type: [PVBusSlave](#).

bp.ap_refclk.busbase11

Type: [PVBusSlave](#).

Type: [PVBusSlave](#).

bp.ap_refclk.busbase13

Type: [PVBusSlave](#).

bp.ap_refclk.busbase14

Type: [PVBusSlave](#).

bp.ap_refclk.busbase15

Type: [PVBusSlave](#).

bp.ap_refclk.busbase2

Type: [PVBusSlave](#).

bp.ap_refclk.busbase3

Type: [PVBusSlave](#).

bp.ap_refclk.busbase4

Type: [PVBusSlave](#).

bp.ap_refclk.busbase5

Type: [PVBusSlave](#).

bp.ap_refclk.busbase6

Type: [PVBusSlave](#).

bp.ap_refclk.busbase7

Type: [PVBusSlave](#).

bp.ap_refclk.busbase8

Type: [PVBusSlave](#).

bp.ap_refclk.busbase9

Type: [PVBusSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a

proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBusSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBusSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`bp.ps2mouse.ps2_clocktimer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`bp.ps2mouse.ps2_clocktimer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`bp.psram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.psram.bus_slave`

Type: `PVBusSlave`.

`bp.refcounter`

Memory Mapped Counter Module for Generic Timers.

Type: `MemoryMappedCounterModule`.

`bp.refcounter.pvbus_control_s[0]`

Type: `PVBusSlave`.

`bp.refcounter.pvbus_read_s[0]`

Type: `PVBusSlave`.

`bp.reset_or`

Or Gate.

Type: `OrGate`.

`bp.rl_dram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.rl_dram.bus_slave`

Type: `PVBusSlave`.

`bp.rt_dram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.rt_dram.bus_slave`

Type: `PVBusSlave`.

`bp.s_dram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.s_dram.bus_slave`

Type: `PVBusSlave`.

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmb

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.sm91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TzC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBUSSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier
Type: `PVBusMapper`.

bp.virtio_rng
VirtioEntropy device over MMIO transport.
Type: `virtioEntropyMMIO`.

bp.virtio_rng.dma_master
Type: `PVBusMaster`.

bp.virtioblockdevice

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).

bp.virtioblockdevice.dma_master

Type: [PVBusMaster](#).

bp.virtioblockdevice_labeller

Type: [Labeller](#).

bp.virtioblockdevice_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

bp.virtiop9device.mmio_slave

Type: [PVBusSlave](#).

bp.virtiop9device.virtio_master

Type: [PVBusMaster](#).

bp.virtiop9device_labeller

Type: [Labeller](#).

bp.virtiop9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-A73 Cluster CT model.

Type: [Cluster_ARM_Cortex-A73](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

cluster0.DAP

Type: [PVBusLogger](#).

cluster0.DAP.mapper

Type: [PVBusMapper](#).

cluster0.DSU

Type: [DSU](#).

cluster0.DSU.mpam_busslave

Type: [PVBusSlave](#).

cluster0.MMAP

Type: [PVBusLogger](#).

cluster0.MMAP.mapper

Type: [PVBusMapper](#).

cluster0.acp_mapper

Type: [PVBusMapper](#).

cluster0.cpu0

ARM Cortex-A73 CT model.

Type: [ARM_Cortex-A73](#).

cluster0.cpu0.UTLB

Type: TLB.

cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

cluster0.cpu0.gicv3_cpu_if

Type: [GICv3CPUInterface](#).

cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

cluster0.cpu0.l1dcache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

cluster0.cpu0.l1icache.upstream[0]

Type: [PVBusSlave](#).

cluster0.ext_bus

Type: [PVBusLogger](#).

cluster0.ext_bus.mapper

Type: [PVBusMapper](#).

cluster0.gic_cpuif_decoder_cluster

Type: [GICv3CPUInterfaceDecoder](#).

cluster0.l2_cache

PV Cache.

Type: [PVCache](#).

cluster0.l2_cache.upstream[0]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[10]

Type: [PVBusSlave](#).

cluster0.l2_cache.upstream[11]

Type: [PVBusSlave](#).

cluster0.12_cache.upstream[12]

Type: [PVBUSSlave](#).

cluster0.12_cache.upstream[13]

Type: [PVBUSSlave](#).

cluster0.12_cache.upstream[14]

Type: [PVBUSSlave](#).

cluster0.12_cache.upstream[15]

Type: [PVBUSSlave](#).

cluster0.12_cache.upstream[16]

Type: [PVBUSSlave](#).

cluster0.12_cache.upstream[1]

Type: [PVBUSSlave](#).

cluster0.12_cache.upstream[2]

Type: [PVBUSSlave](#).

cluster0.12_cache.upstream[3]

Type: [PVBUSSlave](#).

cluster0.12_cache.upstream[4]

Type: [PVBUSSlave](#).

cluster0.12_cache.upstream[5]

Type: [PVBUSSlave](#).

cluster0.12_cache.upstream[6]

Type: [PVBUSSlave](#).

cluster0.12_cache.upstream[7]

Type: [PVBUSSlave](#).

cluster0.12_cache.upstream[8]

Type: [PVBUSSlave](#).

cluster0.12_cache.upstream[9]

Type: [PVBUSSlave](#).

cluster0.12_flusher

Type: [AsyncCacheFlushUnit](#).

cluster0_labeller

Type: [Labeller](#).

cluster0_labeller.pvbusmodifier

Type: [PVBUSMapper](#).

dapmemlogger

Bus Logger.

Type: [PVBUSLogger](#).

dapmemlogger.mapper

Type: [PVBusMapper](#).

elfloader

ELF loader component.

Type: [ElfLoader](#).

elfloader.pvbus_busmaster

Type: [PVBusMaster](#).

gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

gic_distributor.rd_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0_0_0

Type: [GICv3Redistributor](#).

gic_distributor.rd_tl

Type: [GICv3Distributor](#).

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

pctl.busslave

Type: [PVBusSlave](#).

pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

pctl.utility_bus3

Type: [PVBusMaster](#).

12.43 FVP_Base_Cortex-A73x1-A53x1

List of instances in FVP_Base_Cortex-A73x1-A53x1.

FVP_Base_Cortex-A73x1-A53x1 instances

address_map_terminator

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBUSSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase1

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase10Type: [PVBusSlave](#).**bp.ap_refclk.busbase11**Type: [PVBusSlave](#).**bp.ap_refclk.busbase12**Type: [PVBusSlave](#).**bp.ap_refclk.busbase13**Type: [PVBusSlave](#).**bp.ap_refclk.busbase14**Type: [PVBusSlave](#).**bp.ap_refclk.busbase15**Type: [PVBusSlave](#).**bp.ap_refclk.busbase2**Type: [PVBusSlave](#).**bp.ap_refclk.busbase3**Type: [PVBusSlave](#).**bp.ap_refclk.busbase4**Type: [PVBusSlave](#).**bp.ap_refclk.busbase5**Type: [PVBusSlave](#).**bp.ap_refclk.busbase6**Type: [PVBusSlave](#).**bp.ap_refclk.busbase7**Type: [PVBusSlave](#).**bp.ap_refclk.busbase8**Type: [PVBusSlave](#).**bp.ap_refclk.busbase9**Type: [PVBusSlave](#).**bp.ap_refclk.busctlbase**Type: [PVBusSlave](#).**bp.audioout**

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).**bp.clock100Hz**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBUSMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke

wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl1111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.r1_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave
Type: [PVBusSlave](#).

bp.rt_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.rt_dram.bus_slave
Type: [PVBusSlave](#).

bp.s_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.s_dram.bus_slave
Type: [PVBusSlave](#).

bp.secureDRAM
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.secureDRAM.bus_slave
Type: [PVBusSlave](#).

bp.secureSRAM
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.secureSRAM.bus_slave
Type: [PVBusSlave](#).

bp.secureSRAM_limiter
Type: [PVBusMapper](#).

bp.secureflash
Intel Strata Flash J3 LISA+ model.
Type: [IntelStrataFlashJ3](#).

bp.secureflash.map
Type: [PVBusMapper](#).

bp.secureflash.mbs
Type: [PVBusSlave](#).

bp.secureflash.rmbs
Type: [PVBusSlave](#).

bp.secureflashloader
A device that can preload a gzipped image into flash at startup.
Type: [FlashLoader](#).

bp.smisc_91c111
SMSC 91C111 ethernet controller.
Type: [SMSC_91C111](#).

bp.smsc_91c111.SMSC slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBusSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: `NonVolatileCounter`.

bp.trusted_nv_counter.pvbuslave

Type: `PVBusSlave`.

bp.trusted_rng

Random Number Generator unit.

Type: `RandomNumberGenerator`.

bp.trusted_rng.pvbuslave

Type: `PVBusSlave`.

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: `SP805_Watchdog`.

bp.trusted_watchdog.busslave

Type: `PVBusSlave`.

bp.trusted_watchdog.clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.trusted_watchdog.clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.tzc_400

TrustZone Address Space Controller.

Type: `TZC_400`.

bp.tzc_400.apbslave[0]

Type: `PVBusSlave`.

bp.tzc_400.filter0
Type: `filter0`.

bp.tzc_400.filter0.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter1
Type: `filter1`.

bp.tzc_400.filter1.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

bp.virtio_rng.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).

bp.virtio_blockdevice.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice_labeller

Type: [Labeller](#).

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

bp.virtio_p9device.mmio_slave

Type: [PVBusSlave](#).

bp.virtio_p9device.virtio_master

Type: [PVBusMaster](#).

bp.virtio_p9device_labeller

Type: [Labeller](#).

bp.virtio_p9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-A73 Cluster CT model.

Type: [Cluster_ARM_Cortex-A73](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

Type: [PVBusSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.hdlcd0.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.hdlcd0.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.hdlcd0_labeller

Type: `Labeller`.

bp.hdlcd0_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.hostbridge

Host Socket Interface Component.

Type: `HostBridge`.

bp.lcd_security_map

Type: `PVBusMapper`.

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: `LS64TestingFIFO`.

bp.ls64_testing_fifo.pvbusslave

Type: `PVBusSlave`.

bp.mmc

Generic Multimedia Card.

Type: `MMC`.

bp.mmc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.mmc.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.mmc.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.mmc.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: `PVMemoryProtectionEngine`.

bp.mpe.mapper

Type: `PVBusMapper`.

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: `IntelStrataFlashJ3`.

bp.nontrustedrom.map

Type: `PVBusMapper`.

bp.nontrustedrom.mbs

Type: `PVBusSlave`.

bp.nontrustedrom.rmbs

Type: `PVBusSlave`.

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: `FlashLoader`.

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.ns_dram.bus_slave

Type: `PVBusSlave`.

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: `PL011_Uart`.

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBusSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBUSMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmb

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smc_91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBUSSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0
Type: `filter0`.

bp.tzc_400.filter0.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter1
Type: `filter1`.

bp.tzc_400.filter1.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifierType: [PVBusMapper](#).**bp.virtio_rng**

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).**bp.virtio_rng.dma_master**Type: [PVBusMaster](#).**bp.virtio_blockdevice**

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).**bp.virtio_blockdevice.dma_master**Type: [PVBusMaster](#).**bp.virtio_blockdevice_labeller**Type: [Labeller](#).**bp.virtio_blockdevice_labeller.pvbusmodifier**Type: [PVBusMapper](#).**bp.virtio_p9device**

virtio P9 server.

Type: [VirtioP9Device](#).**bp.virtio_p9device.mmio_slave**Type: [PVBusSlave](#).**bp.virtio_p9device.virtio_master**Type: [PVBusMaster](#).**bp.virtio_p9device_labeller**Type: [Labeller](#).**bp.virtio_p9device_labeller.pvbusmodifier**Type: [PVBusMapper](#).**bp.vis**

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).**bp.vis.recorder**

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).**bp.vis.recorder.playbackDivider**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-A73 Cluster CT model.

Type: [Cluster_ARM_Cortex-A73](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

cluster0.DAP

Type: [PVBusLogger](#).

Type: [AsyncCacheFlushUnit](#).

cluster0_labeller

Type: [Labeller](#).

cluster0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

dapmemlogger.mapper

Type: [PVBusMapper](#).

elfloader

ELF loader component.

Type: [ElfLoader](#).

elfloader.pvbus_busmaster

Type: [PVBusMaster](#).

gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

gic_distributor.rd_0

Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0

Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0_0

Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0_0_0

Type: GICv3Redistributor.

gic_distributor.rd_0_0_0_1

Type: GICv3Redistributor.

gic_distributor.rd_t1

Type: GICv3Distributor.

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

pctl.busslave

Type: [PVBusSlave](#).

pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0
Type: [PVBusMaster](#).

pctl.utility_bus1
Type: [PVBusMaster](#).

pctl.utility_bus2
Type: [PVBusMaster](#).

pctl.utility_bus3
Type: [PVBusMaster](#).

12.45 FVP_Base_Cortex-A73x2-A53x4

List of instances in FVP_Base_Cortex-A73x2-A53x4.

FVP_Base_Cortex-A73x2-A53x4 instances

address_map_terminator
Type: [PVBusMapper](#).

bp
Peripherals and address map for the Base Platform.
Type: [BasePlatformPeripherals](#).

bp.Timer_0_1
ARM Dual-Timer Module(SP804).
Type: [SP804_Timer](#).

bp.Timer_0_1.busslave
Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0
A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.
Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1
A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.
Type: [ClockDivider](#).

bp.Timer_0_1.counter0
Internal component used by SP804 Timer module.
Type: [CounterModule](#).

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBusSlave](#).

bp.ap_refclk.busbase1

Type: [PVBusSlave](#).

bp.ap_refclk.busbase10

Type: [PVBusSlave](#).

bp.ap_refclk.busbase11

Type: [PVBusSlave](#).

bp.ap_refclk.busbase12

Type: [PVBusSlave](#).

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase3

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase4

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase5

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase6

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase7

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase8

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase9

Type: [PVBUSSlave](#).

bp.ap_refclk.buscctlbase

Type: [PVBUSSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.hdlcd0.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.hdlcd0.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.hdlcd0_labeller

Type: `Labeller`.

bp.hdlcd0_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.hostbridge

Host Socket Interface Component.

Type: `HostBridge`.

bp.lcd_security_map

Type: `PVBusMapper`.

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: `LS64TestingFIFO`.

bp.ls64_testing_fifo.pvbusslave

Type: `PVBusSlave`.

bp.mmc

Generic Multimedia Card.

Type: `MMC`.

bp.mmc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBusSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBusSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmb

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smc_91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBUSSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: `NonVolatileCounter`.

bp.trusted_nv_counter.pvbuslave

Type: `PVBusSlave`.

bp.trusted_rng

Random Number Generator unit.

Type: `RandomNumberGenerator`.

bp.trusted_rng.pvbuslave

Type: `PVBusSlave`.

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: `SP805_Watchdog`.

bp.trusted_watchdog.busslave

Type: `PVBusSlave`.

bp.trusted_watchdog.clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.trusted_watchdog.clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.tzc_400

TrustZone Address Space Controller.

Type: `TZC_400`.

bp.tzc_400.apbslave[0]

Type: `PVBusSlave`.

bp.tzc_400.filter0
Type: `filter0`.

bp.tzc_400.filter0.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter1
Type: `filter1`.

bp.tzc_400.filter1.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

bp.virtio_rng.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).

bp.virtio_blockdevice.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice_labeller

Type: [Labeller](#).

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

bp.virtio_p9device.mmio_slave

Type: [PVBusSlave](#).

bp.virtio_p9device.virtio_master

Type: [PVBusMaster](#).

bp.virtio_p9device_labeller

Type: [Labeller](#).

bp.virtio_p9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-A73 Cluster CT model.

Type: [Cluster_ARM_Cortex-A73](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

ARM Cortex-A73 CT model.

Type: [ARM_Cortex-A73](#).**cluster0.cpu1.UTLB**Type: [TLB](#).

cluster0.cpu1.dtlb
TLB - instruction, data or unified.
Type: TlbCadi.

cluster0.cpu1.gicv3_cpu_if
Type: GICv3CPUInterface.

cluster0.cpu1.l1dcache
PV Cache.
Type: pVCache.

cluster0.cpu1.l1dcache.upstream[0]
Type: pVBusSlave.

cluster0.cpu1.l1icache
PV Cache.
Type: pVCache.

cluster0.cpu1.l1icache.upstream[0]
Type: pVBusSlave.

cluster0.ext_bus
Type: pVBusLogger.

cluster0.ext_bus.mapper
Type: pVBusMapper.

cluster0.gic_cpuif_decoder_cluster
Type: GICv3CPUInterfaceDecoder.

cluster0.l2_cache
PV Cache.
Type: pVCache.

cluster0.l2_cache.upstream[0]
Type: pVBusSlave.

cluster0.l2_cache.upstream[10]
Type: pVBusSlave.

cluster0.l2_cache.upstream[11]

Type: [PVBUSSlave](#).

cluster0.l2_flusher

Type: [AsyncCacheFlushUnit](#).

cluster0_labeller

Type: [Labeller](#).

cluster0_labeller.pvbusmodifier

Type: [PVBUSMapper](#).

cluster1

ARM Cortex-A53 Cluster CT model.

Type: [cluster_ARM_Cortex-A53](#).

cluster1.AMU

Type: [PVBUSLogger](#).

cluster1.AMU.mapper

Type: [PVBUSMapper](#).

cluster1.DAP

Type: [PVBUSLogger](#).

cluster1.DAP.mapper

Type: [PVBUSMapper](#).

cluster1.DSU

Type: DSU.

cluster1.DSU.mpam_busslave

Type: PVBusSlave.

cluster1.MMAP

Type: PVBusLogger.

cluster1.MMAP.mapper

Type: PVBusMapper.

cluster1.acp_mapper

Type: PVBusMapper.

cluster1.cpu0

ARM Cortex-A53 CT model.

Type: ARM_Cortex-A53.

cluster1.cpu0.UTLB

Type: TLB.

cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

cluster1.cpu0.gicv3_cpu_if

Type: GICv3CPUInterface.

cluster1.cpu0.l1dcache

PV Cache.

Type: Pvcache.

cluster1.cpu0.l1dcache.upstream[0]

Type: PVBusSlave.

cluster1.cpu0.l1icache

PV Cache.

Type: Pvcache.

cluster1.cpu0.l1icache.upstream[0]

Type: PVBusSlave.

cluster1.cpu1

ARM Cortex-A53 CT model.

Type: ARM_Cortex-A53.

cluster1.cpu1.UTLB

Type: TLB.

cluster1.cpu1.dtlb

TLB - instruction, data or unified.

Type: Tlbcadi.

cluster1.cpu1.gicv3_cpu_if

Type: GICv3CPUInterface.

cluster1.cpu1.l1dcache

PV Cache.

Type: pvcache.

cluster1.cpu1.l1dcache.upstream[0]

Type: PVBusSlave.

cluster1.cpu1.l1icache

PV Cache.

Type: pvcache.

cluster1.cpu1.l1icache.upstream[0]

Type: PVBusSlave.

cluster1.cpu2

ARM Cortex-A53 CT model.

Type: ARM_Cortex-A53.

cluster1.cpu2.UTLB

Type: TLB.

cluster1.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

cluster1.cpu2.gicv3_cpu_if

Type: GICv3CPUInterface.

cluster1.cpu2.l1dcache

PV Cache.

Type: pvcache.

cluster1.cpu2.l1dcache.upstream[0]

Type: PVBusSlave.

cluster1.cpu2.l1icache

PV Cache.

Type: pvcache.

cluster1.cpu2.l1icache.upstream[0]

Type: PVBusSlave.

cluster1.cpu3

ARM Cortex-A53 CT model.

Type: ARM_Cortex-A53.

cluster1.cpu3.UTLB

Type: TLB.

cluster1.cpu3.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

cluster1.cpu3.gicv3_cpu_if
Type: `GICv3CPUInterface`.

cluster1.cpu3.l1dcache
PV Cache.
Type: `PVCache`.

cluster1.cpu3.l1dcache.upstream[0]
Type: `PVBusSlave`.

cluster1.cpu3.l1icache
PV Cache.
Type: `PVCache`.

Type: [PVBusSlave](#).

cluster1.l2_flusher

Type: [AsyncCacheFlushUnit](#).

cluster1_labeller

Type: [Labeller](#).

cluster1_labeller.pvbusmodifier

Type: [PVBusMapper](#).

dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

dapmemlogger.mapper

Type: [PVBusMapper](#).

elfloader

ELF loader component.

Type: [ElfLoader](#).

elfloader.pvbus_busmaster

Type: [PVBusMaster](#).

gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

gic_distributor.rd_0

Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0

Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0_0

Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0_0_0

Type: GICv3Redistributor.

gic_distributor.rd_0_0_0_1

Type: GICv3Redistributor.

gic_distributor.rd_0_0_1

Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0_1_0

Type: GICv3Redistributor.

gic_distributor.rd_0_0_1_1

Type: GICv3Redistributor.

gic_distributor.rd_0_0_1_2

Type: GICv3Redistributor.

gic_distributor.rd_0_0_1_3

Type: GICv3Redistributor.

gic_distributor.rd_t1

Type: GICv3Distributor.

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).**pctl.busslave**Type: [PVBusSlave](#).**pctl.timer_reset**

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).**pctl.timer_reset.timer**

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke

wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

pctl.utility_bus3

Type: [PVBusMaster](#).

12.46 FVP_Base_Cortex-A73x4

List of instances in FVP_Base_Cortex-A73x4.

FVP_Base_Cortex-A73x4 instances

address_map_terminator

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBUSSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase1
Type: [PVBUSSlave](#).

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase6
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase7
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase8
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase9
Type: [PVBUSSlave](#).

bp.ap_refclk.busctlbase
Type: [PVBUSSlave](#).

bp.audioout
SDL based Audio Output for PL041_AACI.
Type: [AudioOut_SDL](#).

bp.clock100Hz
A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.coresight_modifier

Type: `PVBusMapper`.

bp.dmc

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.dmc.bus_slave

Type: `PVBusSlave`.

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.dmc_phy.bus_slave

Type: `PVBusSlave`.

bp.dram_limiter

Type: `PVBusMapper`.

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.dummy_local_dap_rom.bus_slave

Type: `PVBusSlave`.

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.dummy_ram.bus_slave

Type: `PVBusSlave`.

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.dummy_usb.bus_slave

Type: `PVBusSlave`.

bp.exclusive_monitor

Global exclusive monitor.

Type: `PVBusExclusiveMonitor`.

bp.exclusive_monitor.bus_mapper

Type: `PVBusMapper`.

bp.fixed_security_map

Type: `PVBusMapper`.

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: `IntelStrataFlashJ3`.

bp.flash0.map

Type: `PVBusMapper`.

bp.flash0.mbs

Type: `PVBusSlave`.

bp.flash0.rmbs

Type: `PVBusSlave`.

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: `IntelStrataFlashJ3`.

bp.flash1.map

Type: `PVBusMapper`.

bp.flash1.mbs

Type: `PVBusSlave`.

bp.flash1.rmbs

Type: `PVBusSlave`.

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: `FlashLoader`.

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: `FlashLoader`.

bp.generic_watchdog

ARM Generic Watchdog.

Type: `MemoryMappedGenericWatchdog`.

bp.generic_watchdog.busctlbase

Type: `PVBusSlave`.

bp.generic_watchdog.busrefbase

Type: `PVBusSlave`.

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: `PL370_HDLCD`.

bp.hdlcd0.busmaster

Type: `PVBusMaster`.

bp.hdlcd0.busslave

Type: `PVBusSlave`.

bp.hdlcd0.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()`

callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.hdlcd0.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.hdlcd0.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.hdlcd0.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.hdlcd0_labeller

Type: `Labeller`.

bp.hdlcd0_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.hostbridge

Host Socket Interface Component.

Type: `HostBridge`.

bp.lcd_security_map

Type: `PVBusMapper`.

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: `LS64TestingFIFO`.

bp.ls64_testing_fifo.pvbuslave

Type: `PVBusSlave`.

bp.mmc

Generic Multimedia Card.

Type: `MMC`.

bp.mmc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly

or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

`bp.mmc.timer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`bp.mmc.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`bp.mmc.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`bp.mpe`

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: `PVMemoryProtectionEngine`.

`bp.mpe.mapper`

Type: `PVBusMapper`.

`bp.nontrustedrom`

Intel Strata Flash J3 LISA+ model.

Type: `IntelStrataFlashJ3`.

`bp.nontrustedrom.map`

Type: `PVBusMapper`.

`bp.nontrustedrom.mbs`

Type: `PVBusSlave`.

`bp.nontrustedrom.rmbs`

Type: `PVBusSlave`.

`bp.nontrustedromloader`

A device that can preload a gzipped image into flash at startup.

Type: `FlashLoader`.

`bp.ns_dram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.ns_dram.bus_slaveType: [PVBusSlave](#).**bp.pl011_uart0**

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).**bp.pl011_uart0.busslave**Type: [PVBusSlave](#).**bp.pl011_uart0.clk_divider**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**bp.pl011_uart0.timer**

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).**bp.pl011_uart0.timer.timer**

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).**bp.pl011_uart0.timer.timer.thread**

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).**bp.pl011_uart0.timer.timer.thread_event**

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).**bp.pl011_uart1**

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).**bp.pl011_uart1.busslave**Type: [PVBusSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBusSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).**bp.rl_dram**

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).**bp.rl_dram.bus_slave**Type: [PVBusSlave](#).**bp.rt_dram**

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).**bp.rt_dram.bus_slave**Type: [PVBusSlave](#).**bp.s_dram**

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).**bp.s_dram.bus_slave**Type: [PVBusSlave](#).**bp.secureDRAM**

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).**bp.secureDRAM.bus_slave**Type: [PVBusSlave](#).**bp.secureSRAM**

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).**bp.secureSRAM.bus_slave**Type: [PVBusSlave](#).**bp.secureSRAM_limiter**Type: [PVBusMapper](#).**bp.secureflash**

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).**bp.secureflash.map**Type: [PVBusMapper](#).**bp.secureflash.mbs**Type: [PVBusSlave](#).**bp.secureflash.rmbs**Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smsc_91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBusSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBusSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TzC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0

Type: filter0.

bp.tzc_400.filter0.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter1

Type: filter1.

bp.tzc_400.filter1.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter2

Type: filter2.

bp.tzc_400.filter2.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter3

Type: filter3.

bp.tzc_400.filter3.BusMapper

Type: [PVBusMapper](#).

bp.utility_bus_map0

Type: [PVBusMapper](#).

bp.utility_bus_map1

Type: [PVBusMapper](#).

bp.utility_bus_map2

Type: [PVBusMapper](#).

bp.utility_bus_map3

Type: [PVBusMapper](#).

bp.ve_sysregs

Type: [VE_SysRegs](#).

bp.ve_sysregs.busslave

Type: [PVBusSlave](#).

bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

bp.virtio_net

VirtioNet device over MMIO transport.

Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master

Type: `PVBusMaster`.

bp.virtio_net_labeller

Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

bp.virtio_rng.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtio_blockdevice.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice_labeller

Type: `Labeller`.

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtio_p9device.mmio_slave

Type: `PVBusSlave`.

bp.virtio_p9device.virtio_master

Type: `PVBusMaster`.

bp.virtio_p9device_labeller

Type: `Labeller`.

bp.virtio_p9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.vis.recorder.playbackTimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.vis.recorder.recordingDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-A73 Cluster CT model.

Type: `Cluster_ARM_Cortex-A73`.**cluster0.AMU**Type: `PVBusLogger`.**cluster0.AMU.mapper**Type: `PVBusMapper`.**cluster0.DAP**Type: `PVBusLogger`.**cluster0.DAP.mapper**Type: `PVBusMapper`.**cluster0.DSU**Type: `DSU`.**cluster0.DSU.mpam_busslave**Type: `PVBusSlave`.**cluster0.MMAP**Type: `PVBusLogger`.**cluster0.MMAP.mapper**Type: `PVBusMapper`.**cluster0.acp_mapper**Type: `PVBusMapper`.**cluster0.cpu0**

ARM Cortex-A73 CT model.

Type: `ARM_Cortex-A73`.**cluster0.cpu0.UTLB**Type: `TLB`.**cluster0.cpu0.dtlb**

TLB - instruction, data or unified.

Type: `TlbCadi`.**cluster0.cpu0.gicv3_cpu_if**Type: `GICv3CPUInterface`.**cluster0.cpu0.l1dcache**

PV Cache.

Type: `PVCache`.**cluster0.cpu0.l1dcache.upstream[0]**Type: `PVBusSlave`.**cluster0.cpu0.l1icache**

PV Cache.

Type: `PVCache`.

cluster0.cpu0.l1icache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu1

ARM Cortex-A73 CT model.

Type: [ARM_Cortex-A73](#).

cluster0.cpu1.UTLB

Type: TLB.

cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

cluster0.cpu1.gicv3_cpu_if

Type: GICv3CPUInterface.

cluster0.cpu1.l1dcache

PV Cache.

Type: [PVCache](#).

cluster0.cpu1.l1dcache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu1.l1icache

PV Cache.

Type: [PVCache](#).

cluster0.cpu1.l1icache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu2

ARM Cortex-A73 CT model.

Type: [ARM_Cortex-A73](#).

cluster0.cpu2.UTLB

Type: TLB.

cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

cluster0.cpu2.gicv3_cpu_if

Type: GICv3CPUInterface.

cluster0.cpu2.l1dcache

PV Cache.

Type: [PVCache](#).

cluster0.cpu2.l1dcache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu2.l1icache

PV Cache.

Type: `PVCache`.

cluster0.cpu2.l1icache.upstream[0]
Type: `PVBusSlave`.

cluster0.cpu3
ARM Cortex-A73 CT model.
Type: `ARM_Cortex-A73`.

cluster0.cpu3.UTLB
Type: `TLB`.

cluster0.cpu3.dtlb
TLB - instruction, data or unified.
Type: `TlbCadi`.

cluster0.cpu3.gicv3_cpu_if
Type: `GICv3CPUInterface`.

cluster0.cpu3.l1dcache
PV Cache.
Type: `PVCache`.

cluster0.cpu3.l1dcache.upstream[0]
Type: `PVBusSlave`.

cluster0.cpu3.l1icache
PV Cache.

ELF loader component.

Type: [ElfLoader](#).**elfloader.pvbus_busmaster**Type: [PVBusMaster](#).**gic_distributor**

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).**gic_distributor.rd_0**Type: [GICv3RedistributorInternal](#).**gic_distributor.rd_0_0**Type: [GICv3RedistributorInternal](#).**gic_distributor.rd_0_0_0**Type: [GICv3RedistributorInternal](#).**gic_distributor.rd_0_0_0_0**Type: [GICv3Redistributor](#).**gic_distributor.rd_0_0_0_1**Type: [GICv3Redistributor](#).**gic_distributor.rd_0_0_0_2**Type: [GICv3Redistributor](#).**gic_distributor.rd_0_0_0_3**Type: [GICv3Redistributor](#).**gic_distributor.rd_t1**Type: [GICv3Distributor](#).**pctl**

Base Platforms Power Controller.

Type: [Base_PowerController](#).**pctl.busslave**Type: [PVBusSlave](#).**pctl.timer_reset**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

Type: [PVBusMaster](#).

12.47 FVP_Base_Cortex-A73x4-A53x4

List of instances in FVP_Base_Cortex-A73x4-A53x4.

FVP_Base_Cortex-A73x4-A53x4 instances

address_map_terminator

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.ap_refclk
ARM Generic Timer.
Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0
Type: [PVBusSlave](#).

bp.ap_refclk.busbase1
Type: [PVBusSlave](#).

bp.ap_refclk.busbase10
Type: [PVBusSlave](#).

bp.ap_refclk.busbase11
Type: [PVBusSlave](#).

bp.ap_refclk.busbase12
Type: [PVBusSlave](#).

bp.ap_refclk.busbase13
Type: [PVBusSlave](#).

bp.ap_refclk.busbase14
Type: [PVBusSlave](#).

bp.ap_refclk.busbase15
Type: [PVBusSlave](#).

bp.ap_refclk.busbase2
Type: [PVBusSlave](#).

bp.ap_refclk.busbase3
Type: [PVBusSlave](#).

bp.ap_refclk.busbase4
Type: [PVBusSlave](#).

bp.ap_refclk.busbase5
Type: [PVBusSlave](#).

bp.ap_refclk.busbase6
Type: [PVBusSlave](#).

bp.ap_refclk.busbase7
Type: [PVBusSlave](#).

bp.ap_refclk.busbase8
Type: [PVBusSlave](#).

bp.ap_refclk.busbase9
Type: [PVBusSlave](#).

bp.ap_refclk.busctlbase
Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.sm91c111.SMSC slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

bp.sp810_sysctrl.busslave

Type: `PVBusSlave`.

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.sram.bus_slave

Type: `PVBusSlave`.

bp.terminal_0

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_1

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_2

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [Tzc_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter2

Type: [filter2](#).

bp.tzc_400.filter2.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter3

Type: [filter3](#).

bp.tzc_400.filter3.BusMapper

Type: [PVBusMapper](#).

bp.utility_bus_map0

Type: [PVBusMapper](#).

bp.utility_bus_map1

Type: [PVBusMapper](#).

bp.utility_bus_map2

Type: [PVBusMapper](#).

bp.utility_bus_map3

Type: [PVBusMapper](#).

bp.ve_sysregs

Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave

Type: [PVBusSlave](#).

bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

bp.virtio_net

VirtioNet device over MMIO transport.

Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master

Type: `PVBusMaster`.

bp.virtio_net_labeller

Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

bp.virtio_rng.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtio_blockdevice.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice_labeller

Type: `Labeller`.

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtio_p9device.mmio_slave

Type: `PVBusSlave`.

bp.virtio_p9device.virtio_master

Type: `PVBusMaster`.

bp.virtio_p9device_labeller

Type: `Labeller`.

bp.virtio_p9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.vis.recorder.playbackTimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.vis.recorder.recordingDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-A73 Cluster CT model.

Type: [cluster_ARM_Cortex-A73](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

gic_distributor.rd_tl

Type: `GICv3Distributor`.

pctl

Base Platforms Power Controller.

Type: `Base_PowerController`.

pctl.busslave

Type: `PVBusSlave`.

pctl.timer_reset

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

pctl.timer_reset.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

pctl.timer_reset.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

pctl.timer_reset.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

pctl.utility_bus0

Type: `PVBusMaster`.

pctl.utility_bus1

Type: `PVBusMaster`.

pctl.utility_bus2

Type: `PVBusMaster`.

pctl.utility_bus3

Type: `PVBusMaster`.

address_map_terminator

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBusSlave](#).

bp.ap_refclk.busbase1

Type: [PVBusSlave](#).

Type: [PVBusSlave](#).

bp.ap_refclk.busbase7

Type: [PVBusSlave](#).

bp.ap_refclk.busbase8

Type: [PVBusSlave](#).

bp.ap_refclk.busbase9

Type: [PVBusSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBusSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a

proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBusSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBusSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.ps2mouse.ps2_clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.psram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.psram.bus_slave

Type: `PVBusSlave`.

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: `MemoryMappedCounterModule`.

bp.refcounter.pvbus_control_s[0]

Type: `PVBusSlave`.

bp.refcounter.pvbus_read_s[0]

Type: `PVBusSlave`.

bp.reset_or

Or Gate.

Type: `OrGate`.

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.rl_dram.bus_slave

Type: `PVBusSlave`.

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.rt_dram.bus_slave

Type: `PVBusSlave`.

bp.s_dram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.s_dram.bus_slave

Type: `PVBusSlave`.

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmb

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

bp.sm5c_91c111.SM5C_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TzC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBUSSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier
Type: `PVBusMapper`.

bp.virtio_rng
VirtioEntropy device over MMIO transport.
Type: `virtioEntropyMMIO`.

bp.virtio_rng.dma_master
Type: `PVBusMaster`.

bp.virtioblockdevice

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).

bp.virtioblockdevice.dma_master

Type: [PVBusMaster](#).

bp.virtioblockdevice_labeller

Type: [Labeller](#).

bp.virtioblockdevice_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

bp.virtiop9device.mmio_slave

Type: [PVBusSlave](#).

bp.virtiop9device.virtio_master

Type: [PVBusMaster](#).

bp.virtiop9device_labeller

Type: [Labeller](#).

bp.virtiop9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

address_map_terminator

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBusSlave](#).

bp.ap_refclk.busbase1

bp.ap_refclk.busbase8

Type: [PVBusSlave](#).

bp.ap_refclk.busbase9

Type: [PVBusSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.sm91c111.SMSC slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

bp.sp810_sysctrl.busslave

Type: `PVBusSlave`.

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.sram.bus_slave

Type: `PVBusSlave`.

bp.terminal_0

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_1

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_2

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [Tzc_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter2

Type: [filter2](#).

bp.tzc_400.filter2.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter3

Type: [filter3](#).

bp.tzc_400.filter3.BusMapper

Type: [PVBusMapper](#).

bp.utility_bus_map0

Type: [PVBusMapper](#).

bp.utility_bus_map1

Type: [PVBusMapper](#).

bp.utility_bus_map2

Type: [PVBusMapper](#).

bp.utility_bus_map3

Type: [PVBusMapper](#).

bp.ve_sysregs

Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave

Type: [PVBusSlave](#).

bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

bp.virtio_net

VirtioNet device over MMIO transport.

Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master

Type: `PVBusMaster`.

bp.virtio_net_labeller

Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

bp.virtio_rng.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtio_blockdevice.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice_labeller

Type: `Labeller`.

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtio_p9device.mmio_slave

Type: `PVBusSlave`.

bp.virtio_p9device.virtio_master

Type: `PVBusMaster`.

bp.virtio_p9device_labeller

Type: `Labeller`.

bp.virtio_p9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.vis.recorder.playbackTimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.vis.recorder.recordingDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-A76 Cluster CT model.

Type: `Cluster_ARM_Cortex-A76`.**cluster0.AMU**Type: `PVBusLogger`.**cluster0.AMU.mapper**Type: `PVBusMapper`.**cluster0.DAP**Type: `PVBusLogger`.**cluster0.DAP.mapper**Type: `PVBusMapper`.**cluster0.DSU**Type: `DSU`.**cluster0.DSU.l3_flusher**Type: `AsyncCacheFlushUnit`.**cluster0.DSU.mpam_busslave**Type: `PVBusSlave`.**cluster0.DSU.shared_cache**

PV Cache.

Type: [ClockTimerThread](#).**pctl.timer_reset.timer**

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).**pctl.timer_reset.timer.thread**A [SchedulerThread](#) instance represents a co-routine thread in the simulation.Type: [SchedulerThread](#).**pctl.timer_reset.timer.thread_event**

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).**pctl.utility_bus0**Type: [PVBusMaster](#).**pctl.utility_bus1**Type: [PVBusMaster](#).**pctl.utility_bus2**Type: [PVBusMaster](#).

pctl.utility_bus3

Type: [PVBusMaster](#).

12.50 FVP_Base_Cortex-A76AE

List of instances in FVP_Base_Cortex-A76AE.

FVP_Base_Cortex-A76AE instances

address_map_terminator

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase1

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase10

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase11

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase12

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase13

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase14

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase15

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase2

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase3

Type: [PVBusSlave](#).

bp.ap_refclk.busbase4

Type: [PVBusSlave](#).

bp.ap_refclk.busbase5

Type: [PVBusSlave](#).

bp.ap_refclk.busbase6

Type: [PVBusSlave](#).

bp.ap_refclk.busbase7

Type: [PVBusSlave](#).

bp.ap_refclk.busbase8

Type: [PVBusSlave](#).

bp.ap_refclk.busbase9

Type: [PVBusSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hd1cd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hd1cd0_labeller

Type: [Labeller](#).

bp.hd1cd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBusSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: `PL11x_CLCD`.

bp.pl111_clcd.pl11x_clcd.busmaster

Type: `PVBusMaster`.

bp.pl111_clcd.pl11x_clcd.busslave

Type: `PVBusSlave`.

bp.pl111_clcd.pl11x_clcd.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.pl111_clcd.pl11x_clcd.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.pl111_clcd_labeller

Type: `Labeller`.

bp.pl111_clcd_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: `PL180_MCI`.

bp.pl180_mci.busslave

Type: `PVBusSlave`.

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

bp.sm5c_91c111.SM5C_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TzC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBUSSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier
Type: `PVBusMapper`.

bp.virtio_rng
VirtioEntropy device over MMIO transport.
Type: `virtioEntropyMMIO`.

bp.virtio_rng.dma_master
Type: `PVBusMaster`.

bp.virtioblockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtioblockdevice.dma_master

Type: `PVBusMaster`.

bp.virtioblockdevice_labeller

Type: `Labeller`.

bp.virtioblockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtiop9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtiop9device.mmio_slave

Type: `PVBusSlave`.

bp.virtiop9device.virtio_master

Type: `PVBusMaster`.

bp.virtiop9device_labeller

Type: `Labeller`.

bp.virtiop9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLC](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smsc_91c111.SMSC slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

bp.sp810_sysctrl.busslave

Type: `PVBusSlave`.

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.sram.bus_slave

Type: `PVBusSlave`.

bp.terminal_0

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_1

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_2

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [Tzc_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter2

Type: [filter2](#).

bp.tzc_400.filter2.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter3

Type: [filter3](#).

bp.tzc_400.filter3.BusMapper

Type: [PVBusMapper](#).

bp.utility_bus_map0

Type: [PVBusMapper](#).

bp.utility_bus_map1

Type: [PVBusMapper](#).

bp.utility_bus_map2

Type: [PVBusMapper](#).

bp.utility_bus_map3

Type: [PVBusMapper](#).

bp.ve_sysregs

Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave

Type: [PVBusSlave](#).

bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

bp.virtio_net

VirtioNet device over MMIO transport.

Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master

Type: `PVBusMaster`.

bp.virtio_net_labeller

Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

bp.virtio_rng.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtio_blockdevice.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice_labeller

Type: `Labeller`.

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtio_p9device.mmio_slave

Type: `PVBusSlave`.

bp.virtio_p9device.virtio_master

Type: `PVBusMaster`.

bp.virtio_p9device_labeller

Type: `Labeller`.

bp.virtio_p9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.vis.recorder.playbackTimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.vis.recorder.recordingDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-A77 Cluster CT model.

Type: `Cluster_ARM_Cortex-A77`.**cluster0.AMU**Type: `PVBusLogger`.**cluster0.AMU.mapper**Type: `PVBusMapper`.**cluster0.DAP**Type: `PVBusLogger`.**cluster0.DAP.mapper**Type: `PVBusMapper`.**cluster0.DSU**Type: `DSU`.**cluster0.DSU.l3_flusher**Type: `AsyncCacheFlushUnit`.**cluster0.DSU.mpam_busslave**Type: `PVBusSlave`.**cluster0.DSU.shared_cache**

PV Cache.

Type: `PVCache`.**cluster0.DSU.shared_cache.upstream[0]**Type: `PVBusSlave`.**cluster0.DSU.shared_cache.upstream[1]**Type: `PVBusSlave`.**cluster0.DSU.shared_cache.upstream[2]**Type: `PVBusSlave`.**cluster0.DSU.shared_cache.upstream[3]**Type: `PVBusSlave`.**cluster0.DSU.shared_cache.upstream[4]**Type: `PVBusSlave`.**cluster0.DSU.shared_cache.upstream[5]**Type: `PVBusSlave`.**cluster0.DSU.shared_cache.upstream[6]**Type: `PVBusSlave`.**cluster0.DSU.shared_cache.upstream[7]**Type: `PVBusSlave`.**cluster0.DSU.shared_cache.upstream[8]**Type: `PVBusSlave`.

cluster0.DSU.shared_cache.upstream[9]

Type: [PVBusSlave](#).

cluster0.MMAP

Type: [PVBusLogger](#).

cluster0.MMAP.mapper

Type: [PVBusMapper](#).

cluster0.cpu0

ARM Cortex-A77 CT model.

Type: [ARM_Cortex-A77](#).

cluster0.cpu0.UTLB

Type: TLB.

cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

cluster0.cpu0.gicv3_cpu_if

Type: [GICv3CPUInterface](#).

cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

cluster0.cpu0.l1dcache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

cluster0.cpu0.l1icache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu0.l2cache

PV Cache.

Type: [PVCache](#).

cluster0.cpu0.l2cache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu0.l2cache.upstream[1]

Type: [PVBusSlave](#).

cluster0.cpu1

ARM Cortex-A77 CT model.

Type: [ARM_Cortex-A77](#).

cluster0.cpu1.UTLB

Type: TLB.

cluster0.cpu1.dtlb
TLB - instruction, data or unified.
Type: [TlbCadi](#).

cluster0.cpu1.gicv3_cpu_if
Type: [GICv3CPUInterface](#).

cluster0.cpu1.l1dcache
PV Cache.
Type: [pvcache](#).

cluster0.cpu1.l1dcache.upstream[0]
Type: [PVBUSSlave](#).

cluster0.cpu1.l1icache
PV Cache.
Type: [pvcache](#).

cluster0.cpu1.l1icache.upstream[0]
Type: [PVBUSSlave](#).

cluster0.cpu1.l2cache
PV Cache.
Type: [pvcache](#).

cluster0.cpu1.l2cache.upstream[0]
Type: [PVBUSSlave](#).

cluster0.cpu1.l2cache.upstream[1]
Type: [PVBUSSlave](#).

cluster0.cpu2
ARM Cortex-A77 CT model.
Type: [ARM_Cortex-A77](#).

cluster0.cpu2.UTLB
Type: [TLB](#).

cluster0.cpu2.dtlb
TLB - instruction, data or unified.
Type: [TlbCadi](#).

cluster0.cpu2.gicv3_cpu_if
Type: [GICv3CPUInterface](#).

cluster0.cpu2.l1dcache
PV Cache.
Type: [pvcache](#).

gic_distributor.rd_0_0_2

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0_2_0

Type: [GICv3Redistributor](#).

gic_distributor.rd_0_0_3

Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0_3_0

Type: GICv3Redistributor.

gic_distributor.rd_tl

Type: GICv3Distributor.

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).**pctl.busslave**Type: [PVBusSlave](#).**pctl.timer_reset**

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).**pctl.timer_reset.timer**

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).**pctl.timer_reset.timer.thread**

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).**pctl.timer_reset.timer.thread_event**

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).**pctl.utility_bus0**Type: [PVBusMaster](#).**pctl.utility_bus1**Type: [PVBusMaster](#).**pctl.utility_bus2**Type: [PVBusMaster](#).

pctl.utility_bus3Type: [PVBusMaster](#).

12.52 FVP_Base_Cortex-A78

List of instances in FVP_Base_Cortex-A78.

FVP_Base_Cortex-A78 instances

address_map_terminatorType: [PVBusMapper](#).**bp**

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).**bp.Timer_0_1**

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).**bp.Timer_0_1.busslave**Type: [PVBusSlave](#).**bp.Timer_0_1.clk_div0**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**bp.Timer_0_1.clk_div1**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**bp.Timer_0_1.counter0**

Internal component used by SP804 Timer module.

Type: [CounterModule](#).**bp.Timer_0_1.counter1**

Internal component used by SP804 Timer module.

Type: [CounterModule](#).**bp.Timer_2_3**

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).**bp.Timer_2_3.busslave**Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBusSlave](#).

bp.ap_refclk.busbase1

Type: [PVBusSlave](#).

bp.ap_refclk.busbase10

Type: [PVBusSlave](#).

bp.ap_refclk.busbase11

Type: [PVBusSlave](#).

bp.ap_refclk.busbase12

Type: [PVBusSlave](#).

bp.ap_refclk.busbase13

Type: [PVBusSlave](#).

bp.ap_refclk.busbase14

Type: [PVBusSlave](#).

bp.ap_refclk.busbase15

Type: [PVBusSlave](#).

bp.ap_refclk.busbase2

Type: [PVBusSlave](#).

bp.ap_refclk.busbase3

Type: [PVBusSlave](#).

bp.ap_refclk.busbase4

Type: [PVBusSlave](#).

bp.ap_refclk.busbase5

Type: [PVBusSlave](#).

bp.ap_refclk.busbase6

Type: [PVBusSlave](#).

bp.ap_refclk.busbase7

Type: [PVBusSlave](#).

bp.ap_refclk.busbase8

Type: [PVBusSlave](#).

bp.ap_refclk.busbase9

Type: [PVBusSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hd1cd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hd1cd0_labeller

Type: [Labeller](#).

bp.hd1cd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBusSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: `PL11x_CLCD`.

bp.pl111_clcd.pl11x_clcd.busmaster

Type: `PVBusMaster`.

bp.pl111_clcd.pl11x_clcd.busslave

Type: `PVBusSlave`.

bp.pl111_clcd.pl11x_clcd.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.pl111_clcd.pl11x_clcd.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.pl111_clcd_labeller

Type: `Labeller`.

bp.pl111_clcd_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: `PL180_MCI`.

bp.pl180_mci.busslave

Type: `PVBusSlave`.

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`bp.ps2mouse.ps2_clocktimer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`bp.ps2mouse.ps2_clocktimer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`bp.psram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.psram.bus_slave`

Type: `PVBusSlave`.

`bp.refcounter`

Memory Mapped Counter Module for Generic Timers.

Type: `MemoryMappedCounterModule`.

`bp.refcounter.pvbus_control_s[0]`

Type: `PVBusSlave`.

`bp.refcounter.pvbus_read_s[0]`

Type: `PVBusSlave`.

`bp.reset_or`

Or Gate.

Type: `OrGate`.

`bp.rl_dram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.rl_dram.bus_slave`

Type: `PVBusSlave`.

`bp.rt_dram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.rt_dram.bus_slave`

Type: `PVBusSlave`.

`bp.s_dram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.s_dram.bus_slave`

Type: `PVBusSlave`.

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmb

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

bp.sm5c_91c111.SM5C_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TzC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBUSSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier
Type: `PVBusMapper`.

bp.virtio_rng
VirtioEntropy device over MMIO transport.
Type: `virtioEntropyMMIO`.

bp.virtio_rng.dma_master
Type: `PVBusMaster`.

bp.virtioblockdevice

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).

bp.virtioblockdevice.dma_master

Type: [PVBusMaster](#).

bp.virtioblockdevice_labeller

Type: [Labeller](#).

bp.virtioblockdevice_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

bp.virtiop9device.mmio_slave

Type: [PVBusSlave](#).

bp.virtiop9device.virtio_master

Type: [PVBusMaster](#).

bp.virtiop9device_labeller

Type: [Labeller](#).

bp.virtiop9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-A78 Cluster CT model.

Type: [Cluster_ARM_Cortex-A78](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

cluster0.DAP

Type: [PVBusLogger](#).

cluster0.DAP.mapper

Type: [PVBusMapper](#).

cluster0.DSU

Type: [DSU](#).

cluster0.DSU.l3_flusher

Type: [AsyncCacheFlushUnit](#).

cluster0.DSU.mpam_busslave

Type: [PVBusSlave](#).

cluster0.DSU.shared_cache

PV Cache.

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).**pctl.busslave**Type: [PVBusSlave](#).**pctl.timer_reset**

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.sm91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

bp.sp810_sysctrl.busslave

Type: `PVBusSlave`.

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.sram.bus_slave

Type: `PVBusSlave`.

bp.terminal_0

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_1

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_2

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [Tzc_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter2

Type: [filter2](#).

bp.tzc_400.filter2.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter3

Type: [filter3](#).

bp.tzc_400.filter3.BusMapper

Type: [PVBusMapper](#).

bp.utility_bus_map0

Type: [PVBusMapper](#).

bp.utility_bus_map1

Type: [PVBusMapper](#).

bp.utility_bus_map2

Type: [PVBusMapper](#).

bp.utility_bus_map3

Type: [PVBusMapper](#).

bp.ve_sysregs

Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave

Type: [PVBusSlave](#).

bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

bp.virtio_net

VirtioNet device over MMIO transport.

Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master

Type: `PVBusMaster`.

bp.virtio_net_labeller

Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

bp.virtio_rng.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtio_blockdevice.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice_labeller

Type: `Labeller`.

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtio_p9device.mmio_slave

Type: `PVBusSlave`.

bp.virtio_p9device.virtio_master

Type: `PVBusMaster`.

bp.virtio_p9device_labeller

Type: `Labeller`.

bp.virtio_p9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

`bp.vis.recorder`

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

`bp.vis.recorder.playbackDivider`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`bp.vis.recorder.playbackTimer`

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

`bp.vis.recorder.playbackTimer.timer`

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`bp.vis.recorder.playbackTimer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`bp.vis.recorder.playbackTimer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`bp.vis.recorder.recordingDivider`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`bp.vram`

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-A78AE Cluster CT model.

Type: Cluster_ARM_Cortex-A78AE.

cluster0.AMU

Type: PVBusLogger.

cluster0.AMU.mapper

Type: PVBusMapper.

cluster0.DAP

Type: PVBusLogger.

cluster0.DAP.mapper

Type: PVBusMapper.

cluster0.DSU

Type: dsu.

cluster0.DSU.l3_flusher

Type: AsyncCacheFlushUnit.

cluster0.DSU.mpam_busslave

Type: PVBusSlave.

cluster0.DSU.shared_cache

PV Cache.

Type: pvcache.

cluster0.DSU.shared_cache.upstream[0]

Type: PVBusSlave.

cluster0.DSU.shared_cache.upstream[1]

Type: PVBusSlave.

cluster0.DSU.shared_cache.upstream[2]

Type: PVBusSlave.

cluster0.DSU.shared_cache.upstream[3]

Type: [PVBusSlave](#).

cluster0.MMAP

Type: [PVBusLogger](#).

cluster0.MMAP.mapper

Type: [PVBusMapper](#).

cluster0.cpu0

ARM Cortex-A78AE CT model.

Type: [ARM_Cortex-A78AE](#).

cluster0.cpu0.UTLB

Type: TLB.

cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: [TlbCadi](#).

cluster0.cpu0.gicv3_cpu_if

Type: [GICv3CPUInterface](#).

cluster0.cpu0.l1dcache

PV Cache.

Type: [PVCache](#).

cluster0.cpu0.l1dcache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu0.l1icache

PV Cache.

Type: [PVCache](#).

cluster0.cpu0.l1icache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu0.l2cache

PV Cache.

Type: [PVCache](#).

cluster0.cpu0.l2cache.upstream[0]

Type: [PVBusSlave](#).

cluster0.cpu0.l2cache.upstream[1]

Type: [PVBusSlave](#).

cluster0.cpu1

ARM Cortex-A78AE CT model.

Type: [ARM_Cortex-A78AE](#).

cluster0.cpu1.UTLB

Type: TLB.

cluster0.cpu1.dtlb
TLB - instruction, data or unified.
Type: [TlbCadi](#).

cluster0.cpu1.gicv3_cpu_if
Type: [GICv3CPUInterface](#).

cluster0.cpu1.l1dcache
PV Cache.
Type: [pvcache](#).

cluster0.cpu1.l1dcache.upstream[0]
Type: [PVBUSSlave](#).

cluster0.cpu1.l1icache
PV Cache.
Type: [pvcache](#).

cluster0.cpu1.l1icache.upstream[0]
Type: [PVBUSSlave](#).

cluster0.cpu1.l2cache
PV Cache.
Type: [pvcache](#).

cluster0.cpu1.l2cache.upstream[0]
Type: [PVBUSSlave](#).

cluster0.cpu1.l2cache.upstream[1]
Type: [PVBUSSlave](#).

cluster0.cpu2
ARM Cortex-A78AE CT model.
Type: [ARM_Cortex-A78AE](#).

cluster0.cpu2.UTLB
Type: [TLB](#).

cluster0.cpu2.dtlb
TLB - instruction, data or unified.
Type: [TlbCadi](#).

cluster0.cpu2.gicv3_cpu_if
Type: [GICv3CPUInterface](#).

cluster0.cpu2.l1dcache
PV Cache.
Type: [pvcache](#).

cluster0.cpu2.l1dcache.upstream[0]
Type: [PVBUSSlave](#).

cluster0.cpu2.l1icache
PV Cache.

Type: `PVCache`.

cluster0.cpu2.l1icache.upstream[0]
Type: `PVBusSlave`.

cluster0.cpu2.l2cache
PV Cache.
Type: `PVCache`.

cluster0.cpu2.l2cache.upstream[0]
Type: `PVBusSlave`.

cluster0.cpu2.l2cache.upstream[1]
Type: `PVBusSlave`.

cluster0.cpu3
ARM Cortex-A78AE CT model.
Type: `ARM_Cortex-A78AE`.

cluster0.cpu3.UTLB
Type: `TLB`.

cluster0.cpu3.dtlb
TLB - instruction, data or unified.
Type: `TlbCadi`.

cluster0.cpu3.gicv3_cpu_if
Type: `GICv3CPUInterface`.

cluster0.cpu3.l1dcache
PV Cache.
Type: `PVCache`.

cluster0.cpu3.l1dcache.upstream[0]
Type: `PVBusSlave`.

cluster0.cpu3.l1icache
PV Cache.
Type: `PVCache`.

cluster0.cpu3.l1icache.upstream[0]
Type: `PVBusSlave`.

cluster0.cpu3.l2cache
PV Cache.
Type: `PVCache`.

cluster0.cpu3.l2cache.upstream[0]
Type: `PVBusSlave`.

cluster0.cpu3.l2cache.upstream[1]
Type: `PVBusSlave`.

cluster0.ext_bus
Type: `PVBusLogger`.

cluster0.ext_bus.mapper

Type: [PVBusMapper](#).

cluster0.gic_cpuif_decoder_cluster

Type: [GICv3CPUInterfaceDecoder](#).

cluster0_labeller

Type: [Labeller](#).

cluster0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

dapmemlogger

Bus Logger.

Type: [PVBusLogger](#).

dapmemlogger.mapper

Type: [PVBusMapper](#).

elfloader

ELF loader component.

Type: [ElfLoader](#).

elfloader.pvbus_busmaster

Type: [PVBusMaster](#).

gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

gic_distributor.rd_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0_0_0

Type: [GICv3Redistributor](#).

gic_distributor.rd_0_0_1

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0_1_0

Type: [GICv3Redistributor](#).

gic_distributor.rd_0_0_2

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0_2_0

Type: [GICv3Redistributor](#).

gic_distributor.rd_0_0_3

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0_3_0

Type: [GICv3Redistributor](#).

gic_distributor.rd_tl

Type: [GICv3Distributor](#).

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

pctl.busslave

Type: [PVBusSlave](#).

pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

pctl.utility_bus3Type: [PVBusMaster](#).

12.54 FVP_Base_Cortex-A78C

List of instances in FVP_Base_Cortex-A78C.

FVP_Base_Cortex-A78C instances

address_map_terminatorType: [PVBusMapper](#).**bp**

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).**bp.Timer_0_1**

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).**bp.Timer_0_1.busslave**Type: [PVBusSlave](#).**bp.Timer_0_1.clk_div0**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**bp.Timer_0_1.clk_div1**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**bp.Timer_0_1.counter0**

Internal component used by SP804 Timer module.

Type: [CounterModule](#).**bp.Timer_0_1.counter1**

Internal component used by SP804 Timer module.

Type: [CounterModule](#).**bp.Timer_2_3**

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).**bp.Timer_2_3.busslave**Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBUSlave](#).

bp.ap_refclk.busbase1

Type: [PVBUSlave](#).

bp.ap_refclk.busbase10

Type: [PVBUSlave](#).

bp.ap_refclk.busbase11

Type: [PVBUSlave](#).

bp.ap_refclk.busbase12

Type: [PVBUSlave](#).

bp.ap_refclk.busbase13

Type: [PVBUSlave](#).

bp.ap_refclk.busbase14

Type: [PVBUSlave](#).

bp.ap_refclk.busbase15

Type: [PVBUSlave](#).

bp.ap_refclk.busbase2

Type: [PVBUSlave](#).

bp.ap_refclk.busbase3

Type: [PVBusSlave](#).

bp.ap_refclk.busbase4

Type: [PVBusSlave](#).

bp.ap_refclk.busbase5

Type: [PVBusSlave](#).

bp.ap_refclk.busbase6

Type: [PVBusSlave](#).

bp.ap_refclk.busbase7

Type: [PVBusSlave](#).

bp.ap_refclk.busbase8

Type: [PVBusSlave](#).

bp.ap_refclk.busbase9

Type: [PVBusSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmb

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hd1cd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hd1cd0_labeller

Type: [Labeller](#).

bp.hd1cd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBusSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: `PL11x_CLCD`.

bp.pl111_clcd.pl11x_clcd.busmaster

Type: `PVBusMaster`.

bp.pl111_clcd.pl11x_clcd.busslave

Type: `PVBusSlave`.

bp.pl111_clcd.pl11x_clcd.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.pl111_clcd.pl11x_clcd.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.pl111_clcd_labeller

Type: `Labeller`.

bp.pl111_clcd_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: `PL180_MCI`.

bp.pl180_mci.busslave

Type: `PVBusSlave`.

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.psram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.psram.bus_slave

Type: `PVBusSlave`.

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: `MemoryMappedCounterModule`.

bp.refcounter.pvbus_control_s[0]

Type: `PVBusSlave`.

bp.refcounter.pvbus_read_s[0]

Type: `PVBusSlave`.

bp.reset_or

Or Gate.

Type: `OrGate`.

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.rl_dram.bus_slave

Type: `PVBusSlave`.

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.rt_dram.bus_slave

Type: `PVBusSlave`.

bp.s_dram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.s_dram.bus_slave

Type: `PVBusSlave`.

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmb

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.sm91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TzC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBUSSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier
Type: `PVBusMapper`.

bp.virtio_rng
VirtioEntropy device over MMIO transport.
Type: `virtioEntropyMMIO`.

bp.virtio_rng.dma_master
Type: `PVBusMaster`.

bp.virtioblockdevice

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).

bp.virtioblockdevice.dma_master

Type: [PVBusMaster](#).

bp.virtioblockdevice_labeller

Type: [Labeller](#).

bp.virtioblockdevice_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

bp.virtiop9device.mmio_slave

Type: [PVBusSlave](#).

bp.virtiop9device.virtio_master

Type: [PVBusMaster](#).

bp.virtiop9device_labeller

Type: [Labeller](#).

bp.virtiop9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-A78C Cluster CT model.

Type: [Cluster_ARM_Cortex-A78C](#).

cluster0.AMU

Type: [PVBUSLogger](#).

cluster0.AMU.mapper

Type: [PVBUSMapper](#).

cluster0.cpu3.UTLB

Type: `TLB`.

cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

cluster0.cpu3.gicv3_cpu_if
Type: `GICv3CPUInterface`.

cluster0.cpu3.l1dcache
PV Cache.
Type: `PVCache`.

cluster0.cpu3.l1dcache.upstream[0]
Type: `PVBusSlave`.

cluster0.cpu3.l1icache
PV Cache.
Type: `PVCache`.

cluster0.cpu3.l1icache.upstream[0]
Type: `PVBusSlave`.

cluster0.cpu3.l2cache
PV Cache.
Type: `PVCache`.

cluster0.cpu3.l2cache.upstream[0]
Type: `PVBusSlave`.

cluster0.cpu3.l2cache.upstream[1]
Type: `PVBusSlave`.

cluster0.ext_bus
Type: `PVBusLogger`.

cluster0.ext_bus.mapper
Type: `PVBusMapper`.

cluster0.gic_cpuif_decoder_cluster
Type: `GICv3CPUInterfaceDecoder`.

cluster0_labeller
Type: `Labeller`.

cluster0_labeller.pvbusmodifier
Type: `PVBusMapper`.

dapmemlogger
Bus Logger.
Type: `PVBusLogger`.

dapmemlogger.mapper
Type: `PVBusMapper`.

elfloader
ELF loader component.
Type: `ElfLoader`.

elfloader.pvbus_busmasterType: [PVBusMaster](#).**gic_distributor**

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).**gic_distributor.rd_0**

Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0

Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0_0

Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0_0_0

Type: GICv3Redistributor.

gic_distributor.rd_0_0_1

Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0_1_0

Type: GICv3Redistributor.

gic_distributor.rd_0_0_2

Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0_2_0

Type: GICv3Redistributor.

gic_distributor.rd_0_0_3

Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0_3_0

Type: GICv3Redistributor.

gic_distributor.rd_t1

Type: GICv3Distributor.

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).**pctl.busslave**Type: [PVBusSlave](#).**pctl.timer_reset**

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

pctl.utility_bus3

Type: [PVBusMaster](#).

12.55 FVP_Base_Cortex-X1

List of instances in FVP_Base_Cortex-X1.

FVP_Base_Cortex-X1 instances

address_map_terminator

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBUSSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBUSSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase1

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase10

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase11

Type: [PVBUSSlave](#).

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase7

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase8

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase9

Type: [PVBUSSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBUSSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.sm91c111.SMSC slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

bp.sp810_sysctrl.busslave

Type: `PVBusSlave`.

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.sram.bus_slave

Type: `PVBusSlave`.

bp.terminal_0

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_1

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_2

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [Tzc_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter2

Type: [filter2](#).

bp.tzc_400.filter2.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter3

Type: [filter3](#).

bp.tzc_400.filter3.BusMapper

Type: [PVBusMapper](#).

bp.utility_bus_map0

Type: [PVBusMapper](#).

bp.utility_bus_map1

Type: [PVBusMapper](#).

bp.utility_bus_map2

Type: [PVBusMapper](#).

bp.utility_bus_map3

Type: [PVBusMapper](#).

bp.ve_sysregs

Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave

Type: [PVBusSlave](#).

bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

bp.virtio_net

VirtioNet device over MMIO transport.

Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master

Type: `PVBusMaster`.

bp.virtio_net_labeller

Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

bp.virtio_rng.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtio_blockdevice.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice_labeller

Type: `Labeller`.

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtio_p9device.mmio_slave

Type: `PVBusSlave`.

bp.virtio_p9device.virtio_master

Type: `PVBusMaster`.

bp.virtio_p9device_labeller

Type: `Labeller`.

bp.virtio_p9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.vis.recorder.playbackTimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.vis.recorder.recordingDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-X1 Cluster CT model.

Type: `Cluster_ARM_Cortex-X1`.**cluster0.AMU**Type: `PVBusLogger`.**cluster0.AMU.mapper**Type: `PVBusMapper`.**cluster0.DAP**Type: `PVBusLogger`.**cluster0.DAP.mapper**Type: `PVBusMapper`.**cluster0.DSU**Type: `DSU`.**cluster0.DSU.l3_flusher**Type: `AsyncCacheFlushUnit`.**cluster0.DSU.mpam_busslave**Type: `PVBusSlave`.**cluster0.DSU.shared_cache**

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).**pctl.busslave**Type: [PVBusSlave](#).**pctl.timer_reset**

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).**pctl.timer_reset.timer**

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).**pctl.timer_reset.timer.thread**

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).**pctl.timer_reset.timer.thread_event**

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).**pctl.utility_bus0**Type: [PVBusMaster](#).**pctl.utility_bus1**Type: [PVBusMaster](#).**pctl.utility_bus2**Type: [PVBusMaster](#).

pctl.utility_bus3Type: [PVBusMaster](#).

12.56 FVP_Base_Cortex-X1C

List of instances in FVP_Base_Cortex-X1C.

FVP_Base_Cortex-X1C instances

address_map_terminatorType: [PVBusMapper](#).**bp**

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).**bp.Timer_0_1**

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).**bp.Timer_0_1.busslave**Type: [PVBusSlave](#).**bp.Timer_0_1.clk_div0**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**bp.Timer_0_1.clk_div1**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**bp.Timer_0_1.counter0**

Internal component used by SP804 Timer module.

Type: [CounterModule](#).**bp.Timer_0_1.counter1**

Internal component used by SP804 Timer module.

Type: [CounterModule](#).**bp.Timer_2_3**

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).**bp.Timer_2_3.busslave**Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase1

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase10

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase11

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase4

Type: [PVBusSlave](#).

bp.ap_refclk.busbase5

Type: [PVBusSlave](#).

bp.ap_refclk.busbase6

Type: [PVBusSlave](#).

bp.ap_refclk.busbase7

Type: [PVBusSlave](#).

bp.ap_refclk.busbase8

Type: [PVBusSlave](#).

bp.ap_refclk.busbase9

Type: [PVBusSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hd1cd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hd1cd0_labeller

Type: [Labeller](#).

bp.hd1cd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBusSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: `PL11x_CLCD`.

bp.pl111_clcd.pl11x_clcd.busmaster

Type: `PVBusMaster`.

bp.pl111_clcd.pl11x_clcd.busslave

Type: `PVBusSlave`.

bp.pl111_clcd.pl11x_clcd.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.pl111_clcd.pl11x_clcd.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.pl111_clcd_labeller

Type: `Labeller`.

bp.pl111_clcd_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: `PL180_MCI`.

bp.pl180_mci.busslave

Type: `PVBusSlave`.

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.psram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.psram.bus_slave

Type: `PVBusSlave`.

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: `MemoryMappedCounterModule`.

bp.refcounter.pvbus_control_s[0]

Type: `PVBusSlave`.

bp.refcounter.pvbus_read_s[0]

Type: `PVBusSlave`.

bp.reset_or

Or Gate.

Type: `OrGate`.

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.rl_dram.bus_slave

Type: `PVBusSlave`.

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.rt_dram.bus_slave

Type: `PVBusSlave`.

bp.s_dram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.s_dram.bus_slave

Type: `PVBusSlave`.

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmb

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.sm91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TzC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBUSSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier
Type: `PVBusMapper`.

bp.virtio_rng
VirtioEntropy device over MMIO transport.
Type: `virtioEntropyMMIO`.

bp.virtio_rng.dma_master
Type: `PVBusMaster`.

bp.virtioblockdevice

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).

bp.virtioblockdevice.dma_master

Type: [PVBusMaster](#).

bp.virtioblockdevice_labeller

Type: [Labeller](#).

bp.virtioblockdevice_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

bp.virtiop9device.mmio_slave

Type: [PVBusSlave](#).

bp.virtiop9device.virtio_master

Type: [PVBusMaster](#).

bp.virtiop9device_labeller

Type: [Labeller](#).

bp.virtiop9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBUSSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase1

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase10

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase11

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase12

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase13

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase14

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase15

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase2

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase3

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase4

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase5

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase6

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase7

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase8

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase9

Type: [PVBUSSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBUSSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smsc_91c111.SMSC slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

bp.sp810_sysctrl.busslave

Type: `PVBusSlave`.

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.sram.bus_slave

Type: `PVBusSlave`.

bp.terminal_0

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_1

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_2

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [Tzc_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter2

Type: [filter2](#).

bp.tzc_400.filter2.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter3

Type: [filter3](#).

bp.tzc_400.filter3.BusMapper

Type: [PVBusMapper](#).

bp.utility_bus_map0

Type: [PVBusMapper](#).

bp.utility_bus_map1

Type: [PVBusMapper](#).

bp.utility_bus_map2

Type: [PVBusMapper](#).

bp.utility_bus_map3

Type: [PVBusMapper](#).

bp.ve_sysregs

Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave

Type: [PVBusSlave](#).

bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

bp.virtio_net

VirtioNet device over MMIO transport.

Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master

Type: `PVBusMaster`.

bp.virtio_net_labeller

Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

bp.virtio_rng.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtio_blockdevice.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice_labeller

Type: `Labeller`.

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtio_p9device.mmio_slave

Type: `PVBusSlave`.

bp.virtio_p9device.virtio_master

Type: `PVBusMaster`.

bp.virtio_p9device_labeller

Type: `Labeller`.

bp.virtio_p9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.vis.recorder.playbackTimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.vis.recorder.recordingDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-X2 Cluster CT model.

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).**pctl.busslave**Type: [PVBusSlave](#).**pctl.timer_reset**

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

pctl.timer_reset.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

pctl.timer_reset.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

pctl.timer_reset.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

pctl.utility_bus0

Type: `PVBusMaster`.

pctl.utility_bus1

Type: `PVBusMaster`.

pctl.utility_bus2

Type: `PVBusMaster`.

pctl.utility_bus3

Type: `PVBusMaster`.

12.58 FVP_Base_Cortex-X3

List of instances in `FVP_Base_Cortex-X3`.

FVP_Base_Cortex-X3 instances

address_map_terminator

Type: `PVBusMapper`.

bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBusSlave](#).

bp.ap_refclk.busbase1

Type: [PVBusSlave](#).

bp.ap_refclk.busbase10

Type: [PVBusSlave](#).

bp.ap_refclk.busbase11

Type: [PVBusSlave](#).

Type: [PVBusSlave](#).

bp.ap_refclk.busbase8

Type: [PVBusSlave](#).

bp.ap_refclk.busbase9

Type: [PVBusSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBusSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smisc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smisc_91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0

Type: `filter0`.

bp.tzc_400.filter0.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter1

Type: `filter1`.

bp.tzc_400.filter1.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter2

Type: `filter2`.

bp.tzc_400.filter2.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter3

Type: `filter3`.

bp.tzc_400.filter3.BusMapper

Type: [PVBusMapper](#).

bp.utility_bus_map0

Type: [PVBusMapper](#).

bp.utility_bus_map1

Type: [PVBusMapper](#).

bp.utility_bus_map2

Type: [PVBusMapper](#).

bp.utility_bus_map3
Type: [PVBusMapper](#).

bp.ve_sysregs
Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave
Type: [PVBusSlave](#).

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: [vEDCC](#).

bp.virtio_net
VirtioNet device over MMIO transport.
Type: [VirtioNetMMIO](#).

bp.virtio_net.dma_master
Type: [PVBusMaster](#).

bp.virtio_net_labeller
Type: [Labeller](#).

bp.virtio_net_labeller.pvbusmodifier
Type: [PVBusMapper](#).

bp.virtio_rng
VirtioEntropy device over MMIO transport.
Type: [VirtioEntropyMMIO](#).

bp.virtio_rng.dma_master
Type: [PVBusMaster](#).

bp.virtio_blockdevice
VirtioBlock device over MMIO transport.
Type: [virtioBlockMMIO](#).

bp.virtio_blockdevice.dma_master
Type: [PVBusMaster](#).

bp.virtio_blockdevice_labeller
Type: [Labeller](#).

bp.virtio_blockdevice_labeller.pvbusmodifier
Type: [PVBusMapper](#).

bp.virtio_p9device
virtio P9 server.
Type: [VirtioP9Device](#).

bp.virtio_p9device.mmio_slave
Type: [PVBusSlave](#).

bp.virtio_p9device.virtio_master
Type: [PVBusMaster](#).

bp.virtiop9device_labeller

Type: [Labeller](#).

bp.virtiop9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-X3 Cluster CT model.

Type: [cluster_ARM_Cortex-X3](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

cluster0.DAP

Type: [PVBusLogger](#).

cluster0.DAP.mapper

Type: [PVBusMapper](#).

cluster0.DSU

Type: [DSU](#).

cluster0.DSU.PPU_cluster

Type: [PPUV1](#).

cluster0.DSU.PPU_cluster.busslave

Type: [PVBusSlave](#).

cluster0.DSU.PPU_core0

Type: [PPUV1](#).

cluster0.DSU.PPU_core0.busslave

Type: [PVBusSlave](#).

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

pctl.busslave

Type: [PVBusSlave](#).

pctl.timer_reset

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBusSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`bp.pl041_aaci.timer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`bp.pl041_aaci.timer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`bp.pl050_kmi0`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: `PL050_KMI`.

`bp.pl050_kmi0.busslave`

Type: `PVBusSlave`.

`bp.pl050_kmi0.clk_divider`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`bp.pl050_kmi1`

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: `PL050_KMI`.

`bp.pl050_kmi1.busslave`

Type: `PVBusSlave`.

`bp.pl050_kmi1.clk_divider`

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

`bp.pl111_clcd`

ARM PrimeCell Color LCD Controller(PL111).

Type: `PL111_CLCD`.

`bp.pl111_clcd.pl11x_clcd`

Internal component used by PL110 and PL111 CLCD controllers.

Type: `PL11x_CLCD`.

`bp.pl111_clcd.pl11x_clcd.busmaster`

Type: `PVBusMaster`.

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmb

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.sm91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TzC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBUSSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier
Type: `PVBusMapper`.

bp.virtio_rng
VirtioEntropy device over MMIO transport.
Type: `virtioEntropyMMIO`.

bp.virtio_rng.dma_master
Type: `PVBusMaster`.

bp.virtioblockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtioblockdevice.dma_master

Type: `PVBusMaster`.

bp.virtioblockdevice_labeller

Type: `Labeller`.

bp.virtioblockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtiop9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtiop9device.mmio_slave

Type: `PVBusSlave`.

bp.virtiop9device.virtio_master

Type: `PVBusMaster`.

bp.virtiop9device_labeller

Type: `Labeller`.

bp.virtiop9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-X4 Cluster CT model.

Type: [Cluster_ARM_Cortex-X4](#).

cluster0.AMU

Type: [PVBUSLogger](#).

cluster0.AMU.mapper

Type: [PVBUSMapper](#).

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBusSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBusSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBusSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl1111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBUSSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBUSSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBUSSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave
Type: [PVBusSlave](#).

bp.rt_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.rt_dram.bus_slave
Type: [PVBusSlave](#).

bp.s_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.s_dram.bus_slave
Type: [PVBusSlave](#).

bp.secureDRAM
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.secureDRAM.bus_slave
Type: [PVBusSlave](#).

bp.secureSRAM
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.secureSRAM.bus_slave
Type: [PVBusSlave](#).

bp.secureSRAM_limiter
Type: [PVBusMapper](#).

bp.secureflash
Intel Strata Flash J3 LISA+ model.
Type: [IntelStrataFlashJ3](#).

bp.secureflash.map
Type: [PVBusMapper](#).

bp.secureflash.mbs
Type: [PVBusSlave](#).

bp.secureflash.rmbs
Type: [PVBusSlave](#).

bp.secureflashloader
A device that can preload a gzipped image into flash at startup.
Type: [FlashLoader](#).

bp.smisc_91c111
SMSC 91C111 ethernet controller.
Type: [SMSC_91C111](#).

bp.smsc_91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBusSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0
Type: `filter0`.

bp.tzc_400.filter0.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter1
Type: `filter1`.

bp.tzc_400.filter1.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

bp.virtio_rng.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).

bp.virtio_blockdevice.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice_labeller

Type: [Labeller](#).

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

bp.virtio_p9device.mmio_slave

Type: [PVBusSlave](#).

bp.virtio_p9device.virtio_master

Type: [PVBusMaster](#).

bp.virtio_p9device_labeller

Type: [Labeller](#).

bp.virtio_p9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Cortex-X925 Cluster CT model.

Type: [Cluster_ARM_Cortex-X925](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

cluster0.DAP

Type: [PVBusLogger](#).

cluster0.DAP.mapper

Type: [PVBusMapper](#).

Type: GICv3Distributor.

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).**pctl.busslave**Type: [PVBusSlave](#).**pctl.timer_reset**

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.ap_refclk
ARM Generic Timer.
Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0
Type: [PVBusSlave](#).

bp.ap_refclk.busbase9
Type: [PVBusSlave](#).

bp.ap_refclk.busctlbase
Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLC](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

bp.sm5c_91c111.SM5C_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

bp.sp810_sysctrl.busslave

Type: `PVBusSlave`.

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.sram.bus_slave

Type: `PVBusSlave`.

bp.terminal_0

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_1

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_2

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [Tzc_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter2

Type: [filter2](#).

bp.tzc_400.filter2.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter3

Type: [filter3](#).

bp.tzc_400.filter3.BusMapper

Type: [PVBusMapper](#).

bp.utility_bus_map0

Type: [PVBusMapper](#).

bp.utility_bus_map1

Type: [PVBusMapper](#).

bp.utility_bus_map2

Type: [PVBusMapper](#).

bp.utility_bus_map3

Type: [PVBusMapper](#).

bp.ve_sysregs

Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave

Type: [PVBusSlave](#).

bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

bp.virtio_net

VirtioNet device over MMIO transport.

Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master

Type: `PVBusMaster`.

bp.virtio_net_labeller

Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

bp.virtio_rng.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtio_blockdevice.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice_labeller

Type: `Labeller`.

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtio_p9device.mmio_slave

Type: `PVBusSlave`.

bp.virtio_p9device.virtio_master

Type: `PVBusMaster`.

bp.virtio_p9device_labeller

Type: `Labeller`.

bp.virtio_p9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.vis.recorder.playbackTimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.vis.recorder.recordingDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).**pctl.busslave**Type: [PVBusSlave](#).**pctl.timer_reset**

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).**pctl.timer_reset.timer**

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).**bp.Timer_0_1.busslave**Type: [PVBusSlave](#).**bp.Timer_0_1.clk_div0**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**bp.Timer_0_1.clk_div1**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**bp.Timer_0_1.counter0**

Internal component used by SP804 Timer module.

Type: [CounterModule](#).**bp.Timer_0_1.counter1**

Internal component used by SP804 Timer module.

Type: [CounterModule](#).**bp.Timer_2_3**

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBUSSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase1

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase10

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase11

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase12

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase13

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase14

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase15

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase2

Type: [PVBusSlave](#).

bp.ap_refclk.busbase3

Type: [PVBusSlave](#).

bp.ap_refclk.busbase4

Type: [PVBusSlave](#).

bp.ap_refclk.busbase5

Type: [PVBusSlave](#).

bp.ap_refclk.busbase6

Type: [PVBusSlave](#).

bp.ap_refclk.busbase7

Type: [PVBusSlave](#).

bp.ap_refclk.busbase8

Type: [PVBusSlave](#).

bp.ap_refclk.busbase9

Type: [PVBusSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBUSMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBUSSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBUSSlave](#).

bp.dram_limiterType: [PVBusMapper](#).**bp.dummy_local_dap_rom**

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).**bp.dummy_local_dap_rom.bus_slave**Type: [PVBusSlave](#).**bp.dummy_ram**

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).**bp.dummy_ram.bus_slave**Type: [PVBusSlave](#).**bp.dummy_usb**

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).**bp.dummy_usb.bus_slave**Type: [PVBusSlave](#).**bp.exclusive_monitor**

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).**bp.exclusive_monitor.bus_mapper**Type: [PVBusMapper](#).**bp.fixed_security_map**Type: [PVBusMapper](#).**bp.flash0**

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).**bp.flash0.map**Type: [PVBusMapper](#).**bp.flash0.mbs**Type: [PVBusSlave](#).**bp.flash0.rmbs**Type: [PVBusSlave](#).**bp.flash1**

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).**bp.flash1.map**Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hd1cd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hd1cd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hd1cd0_labeller

Type: [Labeller](#).

bp.hd1cd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbuslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smsc_91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBusSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter1
Type: filter1.

bp.tzc_400.filter1.BusMapper
Type: [PVBusMapper](#).

bp.tzc_400.filter2
Type: filter2.

bp.tzc_400.filter2.BusMapper
Type: [PVBusMapper](#).

bp.tzc_400.filter3
Type: filter3.

bp.tzc_400.filter3.BusMapper
Type: [PVBusMapper](#).

bp.utility_bus_map0
Type: [PVBusMapper](#).

bp.utility_bus_map1
Type: [PVBusMapper](#).

bp.utility_bus_map2
Type: [PVBusMapper](#).

bp.utility_bus_map3
Type: [PVBusMapper](#).

bp.ve_sysregs
Type: [VE_SysRegs](#).

bp.ve_sysregs.busslave
Type: [PVBusSlave](#).

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: [VEDCC](#).

bp.virtio_net
VirtioNet device over MMIO transport.
Type: [VirtioNetMMIO](#).

bp.virtio_net.dma_master
Type: [PVBusMaster](#).

bp.virtio_net_labeller
Type: [Labeller](#).

bp.virtio_net_labeller.pvbusmodifier
Type: [PVBusMapper](#).

bp.virtio_rng
VirtioEntropy device over MMIO transport.

Type: `virtioEntropyMMIO`.

bp.virtio_rng.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtio_blockdevice.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice_labeller

Type: `Labeller`.

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtio_p9device.mmio_slave

Type: `PVBusSlave`.

bp.virtio_p9device.virtio_master

Type: `PVBusMaster`.

bp.virtio_p9device_labeller

Type: `Labeller`.

bp.virtio_p9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

cci400.cciregisters.clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

cci400.cciregisters.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

cci400.cciregisters.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

clockdivider0

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

cluster0

ARM Neoverse-N1 Cluster CT model.

Type: `Cluster_ARM_Neoverse-N1`.

cluster0.AMU

Type: `PVBusLogger`.

cluster0.AMU.mapper

Type: `PVBusMapper`.

cluster0.DAP

Type: `PVBusLogger`.

cluster0.DAP.mapper

Type: `PVBusMapper`.

cluster0.DSU

Type: `DSU`.

cluster0.DSU.13_flusher

Type: `AsyncCacheFlushUnit`.

cluster0.DSU.mpam_busslave

Type: [PVBusSlave](#).

cluster0.DSU.shared_cache

PV Cache.

Type: [PVCache](#).

cluster0.DSU.shared_cache.upstream[0]

Type: [PVBusSlave](#).

cluster0.DSU.shared_cache.upstream[1]

Type: [PVBusSlave](#).

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

pctl.busslave

Type: [PVBusSlave](#).

pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

pctl.utility_bus3

Type: [PVBusMaster](#).

12.63 FVP_Base_Neoverse-N2

List of instances in FVP_Base_Neoverse-N2.

FVP_Base_Neoverse-N2 instances

address_map_terminator

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBUSSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBUSSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBusSlave](#).

bp.ap_refclk.busbase1

Type: [PVBusSlave](#).

bp.ap_refclk.busbase10

Type: [PVBusSlave](#).

bp.ap_refclk.busbase11

Type: [PVBusSlave](#).

bp.ap_refclk.busbase12

Type: [PVBusSlave](#).

Type: [PVBusSlave](#).

bp.ap_refclk.busbase15

Type: [PVBusSlave](#).

bp.ap_refclk.busbase2

Type: [PVBusSlave](#).

bp.ap_refclk.busbase3

Type: [PVBusSlave](#).

bp.ap_refclk.busbase4

Type: [PVBusSlave](#).

bp.ap_refclk.busbase5

Type: [PVBusSlave](#).

bp.ap_refclk.busbase6

Type: [PVBusSlave](#).

bp.ap_refclk.busbase7

Type: [PVBusSlave](#).

bp.ap_refclk.busbase8

Type: [PVBusSlave](#).

bp.ap_refclk.busbase9

Type: [PVBusSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smsc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smsc_91c111.SMSC slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

bp.sp810_sysctrl.busslave

Type: `PVBusSlave`.

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.sram.bus_slave

Type: `PVBusSlave`.

bp.terminal_0

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_1

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_2

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [Tzc_400](#).

bp.tzc_400.apbslave[0]

Type: [PvBusSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PvBusMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PvBusMapper](#).

bp.tzc_400.filter2

Type: [filter2](#).

bp.tzc_400.filter2.BusMapper

Type: [PvBusMapper](#).

bp.tzc_400.filter3

Type: [filter3](#).

bp.tzc_400.filter3.BusMapper

Type: [PvBusMapper](#).

bp.utility_bus_map0

Type: [PvBusMapper](#).

bp.utility_bus_map1

Type: [PvBusMapper](#).

bp.utility_bus_map2

Type: [PvBusMapper](#).

bp.utility_bus_map3

Type: [PvBusMapper](#).

bp.ve_sysregs

Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave

Type: [PvBusSlave](#).

bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

bp.virtio_net

VirtioNet device over MMIO transport.

Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master

Type: `PVBusMaster`.

bp.virtio_net_labeller

Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

bp.virtio_rng.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtio_blockdevice.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice_labeller

Type: `Labeller`.

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtio_p9device.mmio_slave

Type: `PVBusSlave`.

bp.virtio_p9device.virtio_master

Type: `PVBusMaster`.

bp.virtio_p9device_labeller

Type: `Labeller`.

bp.virtio_p9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.vis.recorder.playbackTimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.vis.recorder.recordingDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Neoverse-N2 Cluster CT model.

Type: `cluster_ARM_Neoverse-N2`.**cluster0.AMU**Type: `PVBusLogger`.**cluster0.AMU.mapper**Type: `PVBusMapper`.**cluster0.DAP**Type: `PVBusLogger`.**cluster0.DAP.mapper**Type: `PVBusMapper`.**cluster0.DSU**Type: `DSU`.**cluster0.DSU.PPU_cluster**Type: `PPUv1`.**cluster0.DSU.PPU_cluster.busslave**Type: `PVBusSlave`.**cluster0.DSU.PPU_core0**Type: `PPUv1`.**cluster0.DSU.PPU_core0.busslave**Type: `PVBusSlave`.**cluster0.DSU.mpam_busslave**Type: `PVBusSlave`.**cluster0.DSU.shared_cache**

Type: [GICv3Distributor](#).

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

pctl.busslave

Type: [PVBusSlave](#).

pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a

proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

pctl.timer_reset.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

pctl.timer_reset.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

pctl.utility_bus0

Type: `PVBusMaster`.

pctl.utility_bus1

Type: `PVBusMaster`.

pctl.utility_bus2

Type: `PVBusMaster`.

pctl.utility_bus3

Type: `PVBusMaster`.

12.64 FVP_Base_Neoverse-N2x1-Neoverse-N2x1

List of instances in `FVP_Base_Neoverse-N2x1-Neoverse-N2x1`.

FVP_Base_Neoverse-N2x1-Neoverse-N2x1 instances

address_map_terminator

Type: `PVBusMapper`.

bp

Peripherals and address map for the Base Platform.

Type: `BasePlatformPeripherals`.

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: `SP804_Timer`.

bp.Timer_0_1.busslave

Type: `PVBusSlave`.

bp.Timer_0_1.clk_div0

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_0_1.counter1

Type: [PVBUSSlave](#).

bp.audioout
SDL based Audio Output for PL041_AACI.
Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).**bp.generic_watchdog**

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).**bp.generic_watchdog.busctlbase**Type: [PVBusSlave](#).**bp.generic_watchdog.busrefbase**Type: [PVBusSlave](#).**bp.hdlcd0**

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).**bp.hdlcd0.busmaster**Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBUSSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smisc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smisc_91c111.SMISC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

bp.sp810_sysctrl.busslave

Type: `PVBusSlave`.

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.sram.bus_slave

Type: `PVBusSlave`.

bp.terminal_0

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_1

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_2

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [Tzc_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter2

Type: [filter2](#).

bp.tzc_400.filter2.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter3

Type: [filter3](#).

bp.tzc_400.filter3.BusMapper

Type: [PVBusMapper](#).

bp.utility_bus_map0

Type: [PVBusMapper](#).

bp.utility_bus_map1

Type: [PVBusMapper](#).

bp.utility_bus_map2

Type: [PVBusMapper](#).

bp.utility_bus_map3

Type: [PVBusMapper](#).

bp.ve_sysregs

Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave

Type: [PVBusSlave](#).

bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

bp.virtio_net

VirtioNet device over MMIO transport.

Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master

Type: `PVBusMaster`.

bp.virtio_net_labeller

Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

bp.virtio_rng.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtio_blockdevice.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice_labeller

Type: `Labeller`.

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtio_p9device.mmio_slave

Type: `PVBusSlave`.

bp.virtio_p9device.virtio_master

Type: `PVBusMaster`.

bp.virtio_p9device_labeller

Type: `Labeller`.

bp.virtio_p9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.vis.recorder.playbackTimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.vis.recorder.recordingDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Neoverse-N2 Cluster CT model.

Type: [cluster_ARM_Neoverse-N2](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

cluster0.DAP

Type: [PVBusLogger](#).

Type: [GICv3Distributor](#).

pctl
Base Platforms Power Controller.
Type: [Base_PowerController](#).

pctl.busslave

Type: [PVBusSlave](#).

pctl.timer_reset

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

pctl.utility_bus3

Type: [PVBusMaster](#).

List of instances in FVP_Base_Neoverse-N3.

FVP_Base_Neoverse-N3 instances

address_map_terminator

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBusSlave](#).

bp.ap_refclk.busbase1

Type: [PVBusSlave](#).

bp.ap_refclk.busbase10

Type: [PVBusSlave](#).

bp.ap_refclk.busbase11

Type: [PVBusSlave](#).

bp.ap_refclk.busbase7

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase8

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase9

Type: [PVBUSSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBUSSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

Host Socket Interface Component.

Type: [HostBridge](#).**bp.lcd_security_map**Type: [PVBusMapper](#).**bp.ls64_testing_fifo**

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).**bp.ls64_testing_fifo.pvbusslave**Type: [PVBusSlave](#).**bp.mmc**

Generic Multimedia Card.

Type: [MMC](#).**bp.mmc.timer**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).**bp.mmc.timer.timer**

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).**bp.mmc.timer.timer.thread**A [SchedulerThread](#) instance represents a co-routine thread in the simulation.Type: [SchedulerThread](#).**bp.mmc.timer.timer.thread_event**

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBusSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a

proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBusSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBusSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`bp.ps2mouse.ps2_clocktimer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`bp.ps2mouse.ps2_clocktimer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`bp.psram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.psram.bus_slave`

Type: `PVBusSlave`.

`bp.refcounter`

Memory Mapped Counter Module for Generic Timers.

Type: `MemoryMappedCounterModule`.

`bp.refcounter.pvbus_control_s[0]`

Type: `PVBusSlave`.

`bp.refcounter.pvbus_read_s[0]`

Type: `PVBusSlave`.

`bp.reset_or`

Or Gate.

Type: `OrGate`.

`bp.rl_dram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.rl_dram.bus_slave`

Type: `PVBusSlave`.

`bp.rt_dram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.rt_dram.bus_slave`

Type: `PVBusSlave`.

`bp.s_dram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.s_dram.bus_slave`

Type: `PVBusSlave`.

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

bp.sm5c_91c111.SM5C_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TzC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBUSSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier
Type: `PVBusMapper`.

bp.virtio_rng
VirtioEntropy device over MMIO transport.
Type: `virtioEntropyMMIO`.

bp.virtio_rng.dma_master
Type: `PVBusMaster`.

bp.virtioblockdevice

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).

bp.virtioblockdevice.dma_master

Type: [PVBusMaster](#).

bp.virtioblockdevice_labeller

Type: [Labeller](#).

bp.virtioblockdevice_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

bp.virtiop9device.mmio_slave

Type: [PVBusSlave](#).

bp.virtiop9device.virtio_master

Type: [PVBusMaster](#).

bp.virtiop9device_labeller

Type: [Labeller](#).

bp.virtiop9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Neoverse-N3 Cluster CT model.

Type: [Cluster_ARM_Neoverse-N3](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

Type: [GICv3Distributor](#).

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

pctl.busslave

Type: [PVBusSlave](#).

pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

pctl.utility_bus3

Type: [PVBusMaster](#).

12.66 FVP_Base_Neoverse-N3x1-Neoverse-N3x1

List of instances in FVP_Base_Neoverse-N3x1-Neoverse-N3x1.

FVP_Base_Neoverse-N3x1-Neoverse-N3x1 instances

address_map_terminator

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBUSSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase1

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase10

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase11

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase12

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase13

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase14

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase15

Type: [PVBUSSlave](#).

Type: [PVBusSlave](#).

bp.ap_refclk.busbase3

Type: [PVBusSlave](#).

bp.ap_refclk.busbase4

Type: [PVBusSlave](#).

bp.ap_refclk.busbase5

Type: [PVBusSlave](#).

bp.ap_refclk.busbase6

Type: [PVBusSlave](#).

bp.ap_refclk.busbase7

Type: [PVBusSlave](#).

bp.ap_refclk.busbase8

Type: [PVBusSlave](#).

bp.ap_refclk.busbase9

Type: [PVBusSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBUSMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBUSSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBUSSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smisc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smisc_91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBusSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter1
Type: filter1.

bp.tzc_400.filter1.BusMapper
Type: [PVBusMapper](#).

bp.tzc_400.filter2
Type: filter2.

bp.tzc_400.filter2.BusMapper
Type: [PVBusMapper](#).

bp.tzc_400.filter3
Type: filter3.

bp.tzc_400.filter3.BusMapper
Type: [PVBusMapper](#).

bp.utility_bus_map0
Type: [PVBusMapper](#).

bp.utility_bus_map1
Type: [PVBusMapper](#).

bp.utility_bus_map2
Type: [PVBusMapper](#).

bp.utility_bus_map3
Type: [PVBusMapper](#).

bp.ve_sysregs
Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave
Type: [PVBusSlave](#).

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: [vEDCC](#).

bp.virtio_net
VirtioNet device over MMIO transport.
Type: [VirtioNetMMIO](#).

bp.virtio_net.dma_master
Type: [PVBusMaster](#).

bp.virtio_net_labeller
Type: [Labeller](#).

bp.virtio_net_labeller.pvbusmodifier
Type: [PVBusMapper](#).

bp.virtio_rng
VirtioEntropy device over MMIO transport.

Type: `virtioEntropyMMIO`.

bp.virtio_rng.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtio_blockdevice.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice_labeller

Type: `Labeller`.

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtio_p9device.mmio_slave

Type: `PVBusSlave`.

bp.virtio_p9device.virtio_master

Type: `PVBusMaster`.

bp.virtio_p9device_labeller

Type: `Labeller`.

bp.virtio_p9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal()

callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

cci400.cciregisters.clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

cci400.cciregisters.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

cci400.cciregisters.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

clockdivider0

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

clockdivider1

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

cluster0

ARM Neoverse-N3 Cluster CT model.

Type: `Cluster_ARM_Neoverse-N3`.

cluster0.AMU

Type: `PVBusLogger`.

cluster0.AMU.mapper

Type: `PVBusMapper`.

cluster0.DAP

Type: `PVBusLogger`.

cluster0.DAP.mapper

Type: [PVBusMapper](#).

cluster0.DSU

Type: [DSU](#).

cluster0.DSU.PPU_cluster

Type: [PPUv1](#).

cluster0.DSU.PPU_cluster.busslave

Type: [PVBusSlave](#).

cluster0.DSU.PPU_core0

Type: [PPUv1](#).

cluster0.DSU.PPU_core0.busslave

Type: [PVBusSlave](#).

cluster0.DSU.mpam_busslave

Type: [PVBusSlave](#).

cluster0.DSU.shared_cache

PV Cache.

Type: [PVCache](#).

cluster0.DSU.shared_cache.upstream[0]

Type: [PVBusSlave](#).

cluster0.DSU.shared_cache.upstream[1]

Type: [PVBusSlave](#).

cluster0.DSU.shared_cache.upstream[2]

cluster1.gic_cpuif_decoder_cluster

Type: GICv3CPUInterfaceDecoder.

cluster1_labeller

Type: Labeller.

cluster1_labeller.pvbusmodifier

Type: PVBusMapper.

dapmemlogger

Bus Logger.

Type: PVBusLogger.

dapmemlogger.mapper

Type: PVBusMapper.

elfloader

ELF loader component.

Type: [ElfLoader](#).

elfloader.pvbus_busmaster

Type: [PVBusMaster](#).

gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

gic_distributor.rd_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0_0_0

Type: [GICv3Redistributor](#).

gic_distributor.rd_0_1

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_1_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_1_0_0

Type: [GICv3Redistributor](#).

gic_distributor.rd_tl

Type: [GICv3Distributor](#).

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

pctl.busslave

Type: [PVBusSlave](#).

pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

pctl.utility_bus3

Type: [PVBusMaster](#).

12.67 FVP_Base_Neoverse-V1

List of instances in FVP_Base_Neoverse-V1.

FVP_Base_Neoverse-V1 instances

address_map_terminator

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBUSSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk
ARM Generic Timer.
Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0
Type: [PVBusSlave](#).

bp.ap_refclk.busbase1
Type: [PVBusSlave](#).

bp.ap_refclk.busbase10

Type: [PVBusSlave](#).

bp.ap_refclk.busbase8
Type: [PVBusSlave](#).

bp.ap_refclk.busbase9
Type: [PVBusSlave](#).

bp.ap_refclk.busctlbase
Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smisc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smisc_91c111.SMISC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

bp.sp810_sysctrl.busslave

Type: `PVBusSlave`.

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.sram.bus_slave

Type: `PVBusSlave`.

bp.terminal_0

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_1

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_2

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [Tzc_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter2

Type: [filter2](#).

bp.tzc_400.filter2.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter3

Type: [filter3](#).

bp.tzc_400.filter3.BusMapper

Type: [PVBusMapper](#).

bp.utility_bus_map0

Type: [PVBusMapper](#).

bp.utility_bus_map1

Type: [PVBusMapper](#).

bp.utility_bus_map2

Type: [PVBusMapper](#).

bp.utility_bus_map3

Type: [PVBusMapper](#).

bp.ve_sysregs

Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave

Type: [PVBusSlave](#).

bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

bp.virtio_net

VirtioNet device over MMIO transport.

Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master

Type: `PVBusMaster`.

bp.virtio_net_labeller

Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

bp.virtio_rng.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtio_blockdevice.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice_labeller

Type: `Labeller`.

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtio_p9device.mmio_slave

Type: `PVBusSlave`.

bp.virtio_p9device.virtio_master

Type: `PVBusMaster`.

bp.virtio_p9device_labeller

Type: `Labeller`.

bp.virtio_p9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.vis.recorder.playbackTimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.vis.recorder.recordingDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Neoverse-V1 Cluster CT model.

Type: `cluster_ARM_Neoverse-V1`.**cluster0.AMU**Type: `PVBusLogger`.**cluster0.AMU.mapper**Type: `PVBusMapper`.**cluster0.DAP**Type: `PVBusLogger`.**cluster0.DAP.mapper**Type: `PVBusMapper`.**cluster0.DSU**Type: `DSU`.**cluster0.DSU.mpam_busslave**Type: `PVBusSlave`.**cluster0.DSU.shared_cache**

PV Cache.

Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0_1_0
Type: GICv3Redistributor.

gic_distributor.rd_0_0_2
Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0_2_0
Type: GICv3Redistributor.

gic_distributor.rd_0_0_3
Type: GICv3RedistributorInternal.

gic_distributor.rd_0_0_3_0

Type: [GICv3Redistributor](#).

gic_distributor.rd_tl

Type: [GICv3Distributor](#).

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

pctl.busslave

Type: [PVBusSlave](#).

pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

pctl.utility_bus3

Type: [PVBusMaster](#).

12.68 FVP_Base_Neoverse-V2x1-Neoverse-V2x1

List of instances in FVP_Base_Neoverse-V2x1-Neoverse-V2x1.

FVP_Base_Neoverse-V2x1-Neoverse-V2x1 instances

address_map_terminator

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase1

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase10

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase11

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase12

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase13

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase14

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase15

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase2

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase3

Type: [PVBusSlave](#).

bp.ap_refclk.busbase4

Type: [PVBusSlave](#).

bp.ap_refclk.busbase5

Type: [PVBusSlave](#).

bp.ap_refclk.busbase6

Type: [PVBusSlave](#).

bp.ap_refclk.busbase7

Type: [PVBusSlave](#).

bp.ap_refclk.busbase8

Type: [PVBusSlave](#).

bp.ap_refclk.busbase9

Type: [PVBusSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hd1cd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hd1cd0_labeller

Type: [Labeller](#).

bp.hd1cd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBusSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: `PL11x_CLCD`.

bp.pl111_clcd.pl11x_clcd.busmaster

Type: `PVBusMaster`.

bp.pl111_clcd.pl11x_clcd.busslave

Type: `PVBusSlave`.

bp.pl111_clcd.pl11x_clcd.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.pl111_clcd.pl11x_clcd.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.pl111_clcd_labeller

Type: `Labeller`.

bp.pl111_clcd_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: `PL180_MCI`.

bp.pl180_mci.busslave

Type: `PVBusSlave`.

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

`bp.ps2mouse.ps2_clocktimer.timer.thread`

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

`bp.ps2mouse.ps2_clocktimer.timer.thread_event`

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

`bp.psram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.psram.bus_slave`

Type: `PVBusSlave`.

`bp.refcounter`

Memory Mapped Counter Module for Generic Timers.

Type: `MemoryMappedCounterModule`.

`bp.refcounter.pvbus_control_s[0]`

Type: `PVBusSlave`.

`bp.refcounter.pvbus_read_s[0]`

Type: `PVBusSlave`.

`bp.reset_or`

Or Gate.

Type: `OrGate`.

`bp.rl_dram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.rl_dram.bus_slave`

Type: `PVBusSlave`.

`bp.rt_dram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.rt_dram.bus_slave`

Type: `PVBusSlave`.

`bp.s_dram`

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

`bp.s_dram.bus_slave`

Type: `PVBusSlave`.

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmb

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.sm91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TzC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBUSSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier
Type: `PVBusMapper`.

bp.virtio_rng
VirtioEntropy device over MMIO transport.
Type: `virtioEntropyMMIO`.

bp.virtio_rng.dma_master
Type: `PVBusMaster`.

bp.virtioblockdevice

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).

bp.virtioblockdevice.dma_master

Type: [PVBusMaster](#).

bp.virtioblockdevice_labeller

Type: [Labeller](#).

bp.virtioblockdevice_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtiop9device

virtio P9 server.

Type: [VirtioP9Device](#).

bp.virtiop9device.mmio_slave

Type: [PVBusSlave](#).

bp.virtiop9device.virtio_master

Type: [PVBusMaster](#).

bp.virtiop9device_labeller

Type: [Labeller](#).

bp.virtiop9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Neoverse-V2 Cluster CT model.

Type: [Cluster_ARM_Neoverse-V2](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

cluster1.DSU.shared_cache.upstream[3]

Type: [PVBusSlave](#).

cluster1.DSU.utility_slave[0]

Type: [PVBusSlave](#).

cluster1.MMAP

Type: [PVBusLogger](#).

cluster1.MMAP.mapper

Type: [PVBusMapper](#).

cluster1.cpu0

ARM Neoverse-V2 CT model.

Type: [ARM_Neoverse-V2](#).

cluster1.cpu0.UTLB

Type: [TLB](#).

cluster1.cpu0.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

cluster1.cpu0.gicv3_cpu_if
Type: `GICv3CPUInterface`.

cluster1.cpu0.l1dcache
PV Cache.
Type: `PVCache`.

cluster1.cpu0.l1dcache.upstream[0]
Type: `PVBusSlave`.

cluster1.cpu0.l1icache
PV Cache.
Type: `PVCache`.

cluster1.cpu0.l1icache.upstream[0]
Type: `PVBusSlave`.

cluster1.cpu0.l2cache
PV Cache.
Type: `PVCache`.

cluster1.cpu0.l2cache.upstream[0]
Type: `PVBusSlave`.

cluster1.cpu0.l2cache.upstream[1]
Type: `PVBusSlave`.

cluster1.ext_bus
Type: `PVBusLogger`.

cluster1.ext_bus.mapper
Type: `PVBusMapper`.

cluster1.gic_cpuif_decoder_cluster
Type: `GICv3CPUInterfaceDecoder`.

cluster1_labeller
Type: `Labeller`.

cluster1_labeller.pvbusmodifier
Type: `PVBusMapper`.

dapmemlogger
Bus Logger.
Type: `PVBusLogger`.

dapmemlogger.mapper
Type: `PVBusMapper`.

elfloader
ELF loader component.
Type: `ElfLoader`.

elfloader.pvbus_busmaster

Type: [PVBusMaster](#).

gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

gic_distributor.rd_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0_0

Type: [GICv3RedistributorInternal](#).

Type: [GICv3Redistributor](#).

gic_distributor.rd_0_1

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_1_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_1_0_0

Type: [GICv3Redistributor](#).

gic_distributor.rd_t1

Type: [GICv3Distributor](#).

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

pctl.busslave

Type: [PVBusSlave](#).

pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBUSSlave](#).

bp.ap_refclk.busctlbase
Type: [PVBUSSlave](#).

bp.audioout
SDL based Audio Output for PL041_AACI.
Type: [AudioOut_SDL](#).

bp.clock100Hz
A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.
Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).**bp.flashloader1**

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).**bp.generic_watchdog**

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).**bp.generic_watchdog.busctlbase**Type: [PVBusSlave](#).**bp.generic_watchdog.busrefbase**Type: [PVBusSlave](#).**bp.hdlcd0**

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).**bp.hdlcd0.busmaster**Type: [PVBusMaster](#).**bp.hdlcd0.busslave**Type: [PVBusSlave](#).**bp.hdlcd0.timer**

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke

wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl1111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.r1_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave
Type: [PVBusSlave](#).

bp.rt_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.rt_dram.bus_slave
Type: [PVBusSlave](#).

bp.s_dram
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.s_dram.bus_slave
Type: [PVBusSlave](#).

bp.secureDRAM
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.secureDRAM.bus_slave
Type: [PVBusSlave](#).

bp.secureSRAM
RAM device, can be dynamic or static ram.
Type: [RAMDevice](#).

bp.secureSRAM.bus_slave
Type: [PVBusSlave](#).

bp.secureSRAM_limiter
Type: [PVBusMapper](#).

bp.secureflash
Intel Strata Flash J3 LISA+ model.
Type: [IntelStrataFlashJ3](#).

bp.secureflash.map
Type: [PVBusMapper](#).

bp.secureflash.mbs
Type: [PVBusSlave](#).

bp.secureflash.rmbs
Type: [PVBusSlave](#).

bp.secureflashloader
A device that can preload a gzipped image into flash at startup.
Type: [FlashLoader](#).

bp.smisc_91c111
SMSC 91C111 ethernet controller.
Type: [SMSC_91C111](#).

bp.smsc_91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBusSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0
Type: `filter0`.

bp.tzc_400.filter0.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter1
Type: `filter1`.

bp.tzc_400.filter1.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

bp.virtio_rng.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).

bp.virtio_blockdevice.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice_labeller

Type: [Labeller](#).

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

bp.virtio_p9device.mmio_slave

Type: [PVBusSlave](#).

bp.virtio_p9device.virtio_master

Type: [PVBusMaster](#).

bp.virtio_p9device_labeller

Type: [Labeller](#).

bp.virtio_p9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Neoverse-V3 Cluster CT model.

Type: [cluster_ARM_Neoverse-V3](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

cluster0.DAP

Type: [PVBusLogger](#).

cluster0.DAP.mapper

Type: [PVBusMapper](#).

cluster0.DSU

Type: DSU.

cluster0.DSU.PPU_cluster

Type: PPUv1.

cluster0.DSU.PPU_cluster.busslave

Type: PVBusSlave.

cluster0.DSU.PPU_core0

Type: PPUv1.

cluster0.DSU.PPU_core0.busslave

Type: PVBusSlave.

cluster0.DSU.mpam_busslave

Type: PVBusSlave.

cluster0.DSU.shared_cache

PV Cache.

Type: PVPatch.

cluster0.DSU.shared_cache.upstream[0]

Type: PVBusSlave.

cluster0.DSU.shared_cache.upstream[1]

Type: PVBusSlave.

cluster0.DSU.shared_cache.upstream[2]

Type: PVBusSlave.

cluster0.DSU.shared_cache.upstream[3]

Type: PVBusSlave.

cluster0.DSU.shared_cache.upstream[4]

Type: PVBusSlave.

cluster0.DSU.utility_slave[0]

Type: PVBusSlave.

cluster0.MMAP

Type: PVBusLogger.

cluster0.MMAP.mapper

Type: PVBusMapper.

cluster0.cpu0

ARM Neoverse-V3 CT model.

Type: ARM_Neoverse-V3.

cluster0.cpu0.UTLB

Type: TLB.

cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

cluster0.cpu0.gicv3_cpu_if
Type: `GICv3CPUInterface`.

cluster0.cpu0.l1dcache
PV Cache.
Type: `PVCache`.

cluster0.cpu0.l1dcache.upstream[0]
Type: `PVBusSlave`.

cluster0.cpu0.l1icache
PV Cache.
Type: `PVCache`.

cluster0.cpu0.l1icache.upstream[0]
Type: `PVBusSlave`.

cluster0.cpu0.l2cache
PV Cache.
Type: `PVCache`.

cluster0.cpu0.l2cache.upstream[0]
Type: `PVBusSlave`.

cluster0.cpu0.l2cache.upstream[1]
Type: `PVBusSlave`.

cluster0.ext_bus
Type: `PVBusLogger`.

cluster0.ext_bus.mapper
Type: `PVBusMapper`.

cluster0.gic_cpuif_decoder_cluster
Type: `GICv3CPUInterfaceDecoder`.

cluster0_labeller
Type: `Labeller`.

cluster0_labeller.pvbusmodifier
Type: `PVBusMapper`.

dapmemlogger
Bus Logger.
Type: `PVBusLogger`.

dapmemlogger.mapper
Type: `PVBusMapper`.

elfloader
ELF loader component.
Type: `ElfLoader`.

elfloader.pvbus_busmaster

Type: [PVBusMaster](#).

gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

gic_distributor.rd_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0_0_0

Type: [GICv3Redistributor](#).

gic_distributor.rd_tl

Type: [GICv3Distributor](#).

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

pctl.busslave

Type: [PVBusSlave](#).

pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

pctl.utility_bus3

Type: [PVBusMaster](#).

12.70 FVP_Base_Neoverse-V3AE

List of instances in FVP_Base_Neoverse-V3AE.

FVP_Base_Neoverse-V3AE instances

address_map_terminator

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBUSSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase1

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase10

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase11

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase12

Type: [PVBusSlave](#).

bp.ap_refclk.busbase13

Type: [PVBusSlave](#).

bp.ap_refclk.busbase14

Type: [PVBusSlave](#).

bp.ap_refclk.busbase15

Type: [PVBusSlave](#).

bp.ap_refclk.busbase2

Type: [PVBusSlave](#).

bp.ap_refclk.busbase3

Type: [PVBusSlave](#).

bp.ap_refclk.busbase4

Type: [PVBusSlave](#).

bp.ap_refclk.busbase5

Type: [PVBusSlave](#).

bp.ap_refclk.busbase6

Type: [PVBusSlave](#).

bp.ap_refclk.busbase7

Type: [PVBusSlave](#).

bp.ap_refclk.busbase8

Type: [PVBusSlave](#).

bp.ap_refclk.busbase9

Type: [PVBusSlave](#).

bp.ap_refclk.busctlbase

Type: [PVBusSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbsType: [PVBusSlave](#).**bp.flash1**

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).**bp.flash1.map**Type: [PVBusMapper](#).**bp.flash1.mbs**Type: [PVBusSlave](#).**bp.flash1.rmbs**Type: [PVBusSlave](#).**bp.flashloader0**

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).**bp.flashloader1**

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).**bp.generic_watchdog**

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).**bp.generic_watchdog.busctlbase**Type: [PVBusSlave](#).**bp.generic_watchdog.busrefbase**Type: [PVBusSlave](#).**bp.hdlcd0**

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).**bp.hdlcd0.busmaster**Type: [PVBusMaster](#).**bp.hdlcd0.busslave**Type: [PVBusSlave](#).**bp.hdlcd0.timer**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.hdlcd0.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.hdlcd0.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.hdlcd0_labeller

Type: `Labeller`.

bp.hdlcd0_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.hostbridge

Host Socket Interface Component.

Type: `HostBridge`.

bp.lcd_security_map

Type: `PVBusMapper`.

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: `LS64TestingFIFO`.

bp.ls64_testing_fifo.pvbusslave

Type: `PVBusSlave`.

bp.mmc

Generic Multimedia Card.

Type: `MMC`.

bp.mmc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.mmc.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.mmc.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.mmc.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: `PVMemoryProtectionEngine`.

bp.mpe.mapper

Type: `PVBusMapper`.

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: `IntelStrataFlashJ3`.

bp.nontrustedrom.map

Type: `PVBusMapper`.

bp.nontrustedrom.mbs

Type: `PVBusSlave`.

bp.nontrustedrom.rmbs

Type: `PVBusSlave`.

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: `FlashLoader`.

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.ns_dram.bus_slave

Type: `PVBusSlave`.

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: `PL011_Uart`.

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBusSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBusSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBusSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smc_91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBUSSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbuslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TZC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0
Type: `filter0`.

bp.tzc_400.filter0.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter1
Type: `filter1`.

bp.tzc_400.filter1.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).

bp.virtio_rng.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).

bp.virtio_blockdevice.dma_master

Type: [PVBusMaster](#).

bp.virtio_blockdevice_labeller

Type: [Labeller](#).

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.virtio_p9device

virtio P9 server.

Type: [VirtioP9Device](#).

bp.virtio_p9device.mmio_slave

Type: [PVBusSlave](#).

bp.virtio_p9device.virtio_master

Type: [PVBusMaster](#).

bp.virtio_p9device_labeller

Type: [Labeller](#).

bp.virtio_p9device_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.vis

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Neoverse-V3AE Cluster CT model.

Type: [Cluster_ARM_Neoverse-V3AE](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

cluster0.DAP

Type: [PVBusLogger](#).

cluster0.DAP.mapper

Type: [PVBusMapper](#).

cluster0.DSU

Type: DSU.

cluster0.DSU.PPU_cluster

Type: PPUv1.

cluster0.DSU.PPU_cluster.busslave

Type: PVBusSlave.

cluster0.DSU.PPU_core0

Type: PPUv1.

cluster0.DSU.PPU_core0.busslave

Type: PVBusSlave.

cluster0.DSU.mpam_busslave

Type: PVBusSlave.

cluster0.DSU.shared_cache

PV Cache.

Type: PVPatch.

cluster0.DSU.shared_cache.upstream[0]

Type: PVBusSlave.

cluster0.DSU.shared_cache.upstream[1]

Type: PVBusSlave.

cluster0.DSU.shared_cache.upstream[2]

Type: PVBusSlave.

cluster0.DSU.shared_cache.upstream[3]

Type: PVBusSlave.

cluster0.DSU.shared_cache.upstream[4]

Type: PVBusSlave.

cluster0.DSU.utility_slave[0]

Type: PVBusSlave.

cluster0.MMAP

Type: PVBusLogger.

cluster0.MMAP.mapper

Type: PVBusMapper.

cluster0.cpu0

ARM Neoverse-V3AE CT model.

Type: ARM_Neoverse-V3AE.

cluster0.cpu0.UTLB

Type: TLB.

cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: `TlbCadi`.

cluster0.cpu0.gicv3_cpu_if
Type: `GICv3CPUInterface`.

cluster0.cpu0.l1dcache
PV Cache.
Type: `PVCache`.

cluster0.cpu0.l1dcache.upstream[0]
Type: `PVBusSlave`.

cluster0.cpu0.l1icache
PV Cache.
Type: `PVCache`.

cluster0.cpu0.l1icache.upstream[0]
Type: `PVBusSlave`.

cluster0.cpu0.l2cache
PV Cache.
Type: `PVCache`.

cluster0.cpu0.l2cache.upstream[0]
Type: `PVBusSlave`.

cluster0.cpu0.l2cache.upstream[1]
Type: `PVBusSlave`.

cluster0.ext_bus
Type: `PVBusLogger`.

cluster0.ext_bus.mapper
Type: `PVBusMapper`.

cluster0.gic_cpuif_decoder_cluster
Type: `GICv3CPUInterfaceDecoder`.

cluster0_labeller
Type: `Labeller`.

cluster0_labeller.pvbusmodifier
Type: `PVBusMapper`.

dapmemlogger
Bus Logger.
Type: `PVBusLogger`.

dapmemlogger.mapper
Type: `PVBusMapper`.

elfloader
ELF loader component.
Type: `ElfLoader`.

elfloader.pvbus_busmaster

Type: [PVBusMaster](#).

gic_distributor

GIC Interrupt Redistribution Infrastructure component.

Type: [GIC_IRI](#).

gic_distributor.rd_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0_0

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_0_0_0

Type: [GICv3Redistributor](#).

gic_distributor.rd_t1

Type: [GICv3Distributor](#).

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

pctl.busslave

Type: [PVBusSlave](#).

pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

pctl.utility_bus3

Type: [PVBusMaster](#).

12.71 FVP_Base_Neoverse-V3AEx1-Neoverse-V3AEx1

List of instances in FVP_Base_Neoverse-V3AEx1-Neoverse-V3AEx1.

FVP_Base_Neoverse-V3AEx1-Neoverse-V3AEx1 instances

address_map_terminator

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBUSSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase1

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase10

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase11

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase12Type: [PVBusSlave](#).**bp.ap_refclk.busbase13**Type: [PVBusSlave](#).**bp.ap_refclk.busbase14**Type: [PVBusSlave](#).**bp.ap_refclk.busbase15**Type: [PVBusSlave](#).**bp.ap_refclk.busbase2**Type: [PVBusSlave](#).**bp.ap_refclk.busbase3**Type: [PVBusSlave](#).**bp.ap_refclk.busbase4**Type: [PVBusSlave](#).**bp.ap_refclk.busbase5**Type: [PVBusSlave](#).**bp.ap_refclk.busbase6**Type: [PVBusSlave](#).**bp.ap_refclk.busbase7**Type: [PVBusSlave](#).**bp.ap_refclk.busbase8**Type: [PVBusSlave](#).**bp.ap_refclk.busbase9**Type: [PVBusSlave](#).**bp.ap_refclk.busctlbase**Type: [PVBusSlave](#).**bp.audioout**

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).**bp.clock100Hz**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**bp.clock24MHz**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbsType: [PVBusSlave](#).**bp.flash1**

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).**bp.flash1.map**Type: [PVBusMapper](#).**bp.flash1.mbs**Type: [PVBusSlave](#).**bp.flash1.rmbs**Type: [PVBusSlave](#).**bp.flashloader0**

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).**bp.flashloader1**

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).**bp.generic_watchdog**

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).**bp.generic_watchdog.busctlbase**Type: [PVBusSlave](#).**bp.generic_watchdog.busrefbase**Type: [PVBusSlave](#).**bp.hdlcd0**

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCDC](#).**bp.hdlcd0.busmaster**Type: [PVBusMaster](#).**bp.hdlcd0.busslave**Type: [PVBusSlave](#).**bp.hdlcd0.timer**

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.hdlcd0.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.hdlcd0.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.hdlcd0_labeller

Type: `Labeller`.

bp.hdlcd0_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.hostbridge

Host Socket Interface Component.

Type: `HostBridge`.

bp.lcd_security_map

Type: `PVBusMapper`.

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: `LS64TestingFIFO`.

bp.ls64_testing_fifo.pvbusslave

Type: `PVBusSlave`.

bp.mmc

Generic Multimedia Card.

Type: `MMC`.

bp.mmc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.mmc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBusSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PLO50_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly

or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmb

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.smc_91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.smc_91c111.SMSC_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBUSSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: `NonVolatileCounter`.

bp.trusted_nv_counter.pvbuslave

Type: `PVBusSlave`.

bp.trusted_rng

Random Number Generator unit.

Type: `RandomNumberGenerator`.

bp.trusted_rng.pvbuslave

Type: `PVBusSlave`.

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: `SP805_Watchdog`.

bp.trusted_watchdog.busslave

Type: `PVBusSlave`.

bp.trusted_watchdog.clocktimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.trusted_watchdog.clocktimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.trusted_watchdog.clocktimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.trusted_watchdog.clocktimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.tzc_400

TrustZone Address Space Controller.

Type: `TZC_400`.

bp.tzc_400.apbslave[0]

Type: `PVBusSlave`.

bp.tzc_400.filter0
Type: `filter0`.

bp.tzc_400.filter0.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter1
Type: `filter1`.

bp.tzc_400.filter1.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifierType: [PVBusMapper](#).**bp.virtio_rng**

VirtioEntropy device over MMIO transport.

Type: [VirtioEntropyMMIO](#).**bp.virtio_rng.dma_master**Type: [PVBusMaster](#).**bp.virtio_blockdevice**

VirtioBlock device over MMIO transport.

Type: [virtioBlockMMIO](#).**bp.virtio_blockdevice.dma_master**Type: [PVBusMaster](#).**bp.virtio_blockdevice_labeller**Type: [Labeller](#).**bp.virtio_blockdevice_labeller.pvbusmodifier**Type: [PVBusMapper](#).**bp.virtio_p9device**

virtio P9 server.

Type: [VirtioP9Device](#).**bp.virtio_p9device.mmio_slave**Type: [PVBusSlave](#).**bp.virtio_p9device.virtio_master**Type: [PVBusMaster](#).**bp.virtio_p9device_labeller**Type: [Labeller](#).**bp.virtio_p9device_labeller.pvbusmodifier**Type: [PVBusMapper](#).**bp.vis**

Display window for VE using Visualisation library.

Type: [VEVisualisation](#).**bp.vis.recorder**

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: [VisEventRecorder](#).**bp.vis.recorder.playbackDivider**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBUSSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCACHE](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Neoverse-V3AE Cluster CT model.

Type: [Cluster_ARM_Neoverse-V3AE](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

cluster0.DAPType: [PVBusLogger](#).**cluster0.DAP.mapper**Type: [PVBusMapper](#).**cluster0.DSU**Type: [DSU](#).**cluster0.DSU.PPU_cluster**Type: [PPUv1](#).**cluster0.DSU.PPU_cluster.busslave**Type: [PVBusSlave](#).**cluster0.DSU.PPU_core0**Type: [PPUv1](#).**cluster0.DSU.PPU_core0.busslave**Type: [PVBusSlave](#).**cluster0.DSU.mpam_busslave**Type: [PVBusSlave](#).**cluster0.DSU.shared_cache**

PV Cache.

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_1_0_0

Type: [GICv3Redistributor](#).

gic_distributor.rd_tl

Type: [GICv3Distributor](#).

pctl

Base Platforms Power Controller.

Type: [Base_PowerController](#).

pctl.busslave

Type: [PVBusSlave](#).

pctl.timer_reset

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This means that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

pctl.timer_reset.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

pctl.timer_reset.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

pctl.timer_reset.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

pctl.utility_bus0

Type: [PVBusMaster](#).

pctl.utility_bus1

Type: [PVBusMaster](#).

pctl.utility_bus2

Type: [PVBusMaster](#).

pctl.utility_bus3

Type: [PVBusMaster](#).

12.72 FVP_Base_Neoverse-V3x1-Neoverse-V3x1

List of instances in FVP_Base_Neoverse-V3x1-Neoverse-V3x1.

FVP_Base_Neoverse-V3x1-Neoverse-V3x1 instances

address_map_terminator

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBUSSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk
ARM Generic Timer.
Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase1
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase10
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase11
Type: [PVBUSSlave](#).

Type: [PVBUSSlave](#).

bp.ap_refclk.busbase4
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase5
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase6
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase7
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase8
Type: [PVBUSSlave](#).

bp.ap_refclk.busbase9
Type: [PVBUSSlave](#).

bp.ap_refclk.busctlbase
Type: [PVBUSSlave](#).

bp.audioout

SDL based Audio Output for PL041_AACI.

Type: [AudioOut_SDL](#).

bp.clock100Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock24MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock300MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock32KHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock35MHz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PLO11).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for

the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBUSSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBUSMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBUSSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.psram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.psram.bus_slave

Type: [PVBusSlave](#).

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: [MemoryMappedCounterModule](#).

bp.refcounter.pvbus_control_s[0]

Type: [PVBusSlave](#).

bp.refcounter.pvbus_read_s[0]

Type: [PVBusSlave](#).

bp.reset_or

Or Gate.

Type: [OrGate](#).

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rl_dram.bus_slave

Type: [PVBusSlave](#).

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.rt_dram.bus_slave

Type: [PVBusSlave](#).

bp.s_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.s_dram.bus_slave

Type: [PVBusSlave](#).

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmbs

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm91c111

SMSC 91C111 ethernet controller.

Type: [SMSC_91C111](#).

bp.sm91c111.SMSC slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: `SP810_SysCtrl`.

bp.sp810_sysctrl.busslave

Type: `PVBusSlave`.

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.sram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.sram.bus_slave

Type: `PVBusSlave`.

bp.terminal_0

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_1

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_2

Telnet terminal interface.

Type: `TelnetTerminal`.

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBusSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBusSlave](#).

bp.trusted_watchdog.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [Tzc_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBusSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter2

Type: [filter2](#).

bp.tzc_400.filter2.BusMapper

Type: [PVBusMapper](#).

bp.tzc_400.filter3

Type: [filter3](#).

bp.tzc_400.filter3.BusMapper

Type: [PVBusMapper](#).

bp.utility_bus_map0

Type: [PVBusMapper](#).

bp.utility_bus_map1

Type: [PVBusMapper](#).

bp.utility_bus_map2

Type: [PVBusMapper](#).

bp.utility_bus_map3

Type: [PVBusMapper](#).

bp.ve_sysregs

Type: [vE_SysRegs](#).

bp.ve_sysregs.busslave

Type: [PVBusSlave](#).

bp.vedcc

Daughterboard Configuration Control (DCC).

Type: `VEDCC`.

bp.virtio_net

VirtioNet device over MMIO transport.

Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master

Type: `PVBusMaster`.

bp.virtio_net_labeller

Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_rng

VirtioEntropy device over MMIO transport.

Type: `VirtioEntropyMMIO`.

bp.virtio_rng.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtio_blockdevice.dma_master

Type: `PVBusMaster`.

bp.virtio_blockdevice_labeller

Type: `Labeller`.

bp.virtio_blockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtio_p9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtio_p9device.mmio_slave

Type: `PVBusSlave`.

bp.virtio_p9device.virtio_master

Type: `PVBusMaster`.

bp.virtio_p9device_labeller

Type: `Labeller`.

bp.virtio_p9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

bp.vis.recorder.playbackTimer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.vis.recorder.playbackTimer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.vis.recorder.playbackTimer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.vis.recorder.recordingDivider

A `ClockDivider` is a library component that takes a `ClockSignal` on its input port (which could come from the output of a `MasterClock`, or from another `ClockDivider`), and generates a new `ClockSignal` on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci400

Cache Coherent Interconnect for AXI4 ACE.

Type: [CCI400](#).

cci400.cciinterconnect

Type: [PVCache](#).

cci400.cciregisters

Programmer-visible memory mapped registers for use by CCI400.

Type: [CCIRegisters](#).

cci400.cciregisters.clocktimer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

cci400.cciregisters.clocktimer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

cci400.cciregisters.clocktimer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

cci400.cciregisters.clocktimer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

clockdivider0

A [ClockDivider](#) is a library component that takes a [ClockSignal](#) on its input port (which could come from the output of a [MasterClock](#), or from another [ClockDivider](#)), and generates a new [ClockSignal](#) on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM Neoverse-V3 Cluster CT model.

Type: [cluster_ARM_Neoverse-V3](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

Type: [GICv3RedistributorInternal](#).

gic_distributor.rd_0_1_0_0

Type: [GICv3Redistributor](#).

gic_distributor.rd_tl

Type: `GICv3Distributor`.

pctl

Base Platforms Power Controller.

Type: `Base_PowerController`.

pctl.busslave

Type: `PVBusSlave`.

pctl.timer_reset

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread`.

pctl.timer_reset.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This mean that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

pctl.timer_reset.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

pctl.timer_reset.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

pctl.utility_bus0

Type: `PVBusMaster`.

pctl.utility_bus1

Type: `PVBusMaster`.

pctl.utility_bus2

Type: `PVBusMaster`.

pctl.utility_bus3

Type: `PVBusMaster`.

12.73 FVP_Base_RevC-2xAEMvA

List of instances in FVP_Base_RevC-2xAEMvA.

FVP_Base_RevC-2xAEMvA instances

address_map_terminator

Type: [PVBusMapper](#).

bp

Peripherals and address map for the Base Platform.

Type: [BasePlatformPeripherals](#).

bp.Timer_0_1

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_0_1.busslave

Type: [PVBusSlave](#).

bp.Timer_0_1.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_0_1.counter0

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_0_1.counter1

Internal component used by SP804 Timer module.

Type: [CounterModule](#).

bp.Timer_2_3

ARM Dual-Timer Module(SP804).

Type: [SP804_Timer](#).

bp.Timer_2_3.busslave

Type: [PVBusSlave](#).

bp.Timer_2_3.clk_div0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.clk_div1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.Timer_2_3.counter0

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.Timer_2_3.counter1

Internal component used by SP804 Timer module.

Type: CounterModule.

bp.ap_refclk

ARM Generic Timer.

Type: [MemoryMappedGenericTimer](#).

bp.ap_refclk.busbase0

Type: [PVBusSlave](#).

bp.ap_refclk.busbase1

Type: [PVBusSlave](#).

bp.ap_refclk.busbase10

SDL based Audio Output for PL041_AACI.

Type: [AudioOut SDL](#).**bp.clock100Hz**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**bp.clock24MHz**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**bp.clock300MHz**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**bp.clock32KHz**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).**bp.clock35MHz**

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new

ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clock50Hz

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockCLCD

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.clockdivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.coresight_modifier

Type: [PVBusMapper](#).

bp.dmc

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc.bus_slave

Type: [PVBusSlave](#).

bp.dmc_phy

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dmc_phy.bus_slave

Type: [PVBusSlave](#).

bp.dram_limiter

Type: [PVBusMapper](#).

bp.dummy_local_dap_rom

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_local_dap_rom.bus_slave

Type: [PVBusSlave](#).

bp.dummy_ram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_ram.bus_slave

Type: [PVBusSlave](#).

bp.dummy_usb

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.dummy_usb.bus_slave

Type: [PVBusSlave](#).

bp.exclusive_monitor

Global exclusive monitor.

Type: [PVBusExclusiveMonitor](#).

bp.exclusive_monitor.bus_mapper

Type: [PVBusMapper](#).

bp.fixed_security_map

Type: [PVBusMapper](#).

bp.flash0

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash0.map

Type: [PVBusMapper](#).

bp.flash0.mbs

Type: [PVBusSlave](#).

bp.flash0.rmbs

Type: [PVBusSlave](#).

bp.flash1

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.flash1.map

Type: [PVBusMapper](#).

bp.flash1.mbs

Type: [PVBusSlave](#).

bp.flash1.rmbs

Type: [PVBusSlave](#).

bp.flashloader0

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.flashloader1

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.generic_watchdog

ARM Generic Watchdog.

Type: [MemoryMappedGenericWatchdog](#).

bp.generic_watchdog.busctlbase

Type: [PVBusSlave](#).

bp.generic_watchdog.busrefbase

Type: [PVBusSlave](#).

bp.hdlcd0

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370).

Type: [PL370_HDLCD](#).

bp.hdlcd0.busmaster

Type: [PVBusMaster](#).

bp.hdlcd0.busslave

Type: [PVBusSlave](#).

bp.hdlcd0.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.hdlcd0.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.hdlcd0.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.hdlcd0.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.hdlcd0_labeller

Type: [Labeller](#).

bp.hdlcd0_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.hostbridge

Host Socket Interface Component.

Type: [HostBridge](#).

bp.lcd_security_map

Type: [PVBusMapper](#).

bp.ls64_testing_fifo

FIFO peripheral supporting LS64 accesses for testing purposes.

Type: [LS64TestingFIFO](#).

bp.ls64_testing_fifo.pvbusslave

Type: [PVBusSlave](#).

bp.mmc

Generic Multimedia Card.

Type: [MMC](#).

bp.mmc.timer

A [ClockTimerThread\(64\)](#) is a drop-in replacement for a [ClockTimer\(64\)](#) component. The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread](#).

bp.mmc.timer.timer

A [ClockTimerThread64](#) is a drop-in replacement for [ClockTimer64](#). The main difference to the [ClockTimer](#) component is that the [ClockTimerThread](#) runs the [signal\(\)](#) callback from a proper scheduler thread. This mean that the [signal\(\)](#) function may directly or indirectly invoke [wait\(\)](#) functions to wait for time or events. This is not allowed for the [ClockTimer](#) component which does not use a thread. Components which issue bus transactions from within the timer [signal\(\)](#) callback must use [ClockTimerThread\(64\)](#) rather than [ClockTimer\(64\)](#).

Type: [ClockTimerThread64](#).

bp.mmc.timer.timer.thread

A [SchedulerThread](#) instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.mmc.timer.timer.thread_event

A [SchedulerThreadEvent](#) instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.mpe

Encrypt memory transactions for each encryption context with an independent key to prevent mismatch access.

Type: [PVMemoryProtectionEngine](#).

bp.mpe.mapper

Type: [PVBusMapper](#).

bp.nontrustedrom

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.nontrustedrom.map

Type: [PVBusMapper](#).

bp.nontrustedrom.mbs

Type: [PVBusSlave](#).

bp.nontrustedrom.rmbs

Type: [PVBusSlave](#).

bp.nontrustedromloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.ns_dram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.ns_dram.bus_slave

Type: [PVBusSlave](#).

bp.pl011_uart0

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart0.busslave

Type: [PVBusSlave](#).

bp.pl011_uart0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart0.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart0.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart0.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart0.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart1

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart1.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart1.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart1.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart1.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart1.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart2

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart2.busslave

Type: [PVBUSSlave](#).

bp.pl011_uart2.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart2.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart2.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart2.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart2.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl011_uart3

ARM PrimeCell UART(PL011).

Type: [PL011_Uart](#).

bp.pl011_uart3.busslave

Type: [PVBusSlave](#).

bp.pl011_uart3.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl011_uart3.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl011_uart3.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl011_uart3.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl011_uart3.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl031_rtc

ARM PrimeCell Real Time Clock(PL031).

Type: [PL031_RTC](#).

bp.pl031_rtc.busslave

Type: [PVBUSSlave](#).

bp.pl031_rtc.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

bp.pl031_rtc.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread64](#).

bp.pl031_rtc.timer.timer.thread

A `SchedulerThread` instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl031_rtc.timer.timer.thread_event

A `SchedulerThreadEvent` instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl041_aaci

ARM PrimeCell Advanced Audio CODEC Interface(PL041).

Type: [PL041_AACI](#).

bp.pl041_aaci.busslave

Type: [PVBUSSlave](#).

bp.pl041_aaci.timer

A `ClockTimerThread(64)` is a drop-in replacement for a `ClockTimer(64)` component. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a proper scheduler thread. This means that the `signal()` function may directly or indirectly invoke `wait()` functions to wait for time or events. This is not allowed for the `ClockTimer` component which does not use a thread. Components which issue bus transactions from within the timer `signal()` callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: [ClockTimerThread](#).

bp.pl041_aaci.timer.timer

A `ClockTimerThread64` is a drop-in replacement for `ClockTimer64`. The main difference to the `ClockTimer` component is that the `ClockTimerThread` runs the `signal()` callback from a

proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl041_aaci.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl041_aaci.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl050_kmi0

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi0.busslave

Type: [PVBusSlave](#).

bp.pl050_kmi0.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl050_kmi1

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050).

Type: [PL050_KMI](#).

bp.pl050_kmi1.busslave

Type: [PVBusSlave](#).

bp.pl050_kmi1.clk_divider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.pl111_clcd

ARM PrimeCell Color LCD Controller(PL111).

Type: [PL111_CLCD](#).

bp.pl111_clcd.pl11x_clcd

Internal component used by PL110 and PL111 CLCD controllers.

Type: [PL11x_CLCD](#).

bp.pl111_clcd.pl11x_clcd.busmaster

Type: [PVBusMaster](#).

bp.pl111_clcd.pl11x_clcd.busslave

Type: [PVBusSlave](#).

bp.pl111_clcd.pl11x_clcd.timer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.pl111_clcd.pl11x_clcd.timer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.pl111_clcd_labeller

Type: [Labeller](#).

bp.pl111_clcd_labeller.pvbusmodifier

Type: [PVBusMapper](#).

bp.pl180_mci

ARM PrimeCell Multimedia Card Interface (PL180).

Type: [PL180_MCI](#).

bp.pl180_mci.busslave

Type: [PVBusSlave](#).

bp.ps2keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Keyboard](#).

bp.ps2keyboard.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.ps2keyboard.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.ps2mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050_KMI component.

Type: [PS2Mouse](#).

bp.ps2mouse.ps2_clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.ps2mouse.ps2_clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component

which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use `ClockTimerThread(64)` rather than `ClockTimer(64)`.

Type: `ClockTimerThread64`.

bp.ps2mouse.ps2_clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: `SchedulerThread`.

bp.ps2mouse.ps2_clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: `SchedulerThreadEvent`.

bp.psram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.psram.bus_slave

Type: `PVBusSlave`.

bp.refcounter

Memory Mapped Counter Module for Generic Timers.

Type: `MemoryMappedCounterModule`.

bp.refcounter.pvbus_control_s[0]

Type: `PVBusSlave`.

bp.refcounter.pvbus_read_s[0]

Type: `PVBusSlave`.

bp.reset_or

Or Gate.

Type: `OrGate`.

bp.rl_dram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.rl_dram.bus_slave

Type: `PVBusSlave`.

bp.rt_dram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.rt_dram.bus_slave

Type: `PVBusSlave`.

bp.s_dram

RAM device, can be dynamic or static ram.

Type: `RAMDevice`.

bp.s_dram.bus_slave

Type: `PVBusSlave`.

bp.secureDRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureDRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.secureSRAM.bus_slave

Type: [PVBusSlave](#).

bp.secureSRAM_limiter

Type: [PVBusMapper](#).

bp.secureflash

Intel Strata Flash J3 LISA+ model.

Type: [IntelStrataFlashJ3](#).

bp.secureflash.map

Type: [PVBusMapper](#).

bp.secureflash.mbs

Type: [PVBusSlave](#).

bp.secureflash.rmb

Type: [PVBusSlave](#).

bp.secureflashloader

A device that can preload a gzipped image into flash at startup.

Type: [FlashLoader](#).

bp.sm5c_91c111

SM5C 91C111 ethernet controller.

Type: [SM5C_91C111](#).

bp.sm5c_91c111.SM5C_slave

Type: [PVBusSlave](#).

bp.sp805_wdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.sp805_wdog.busslave

Type: [PVBusSlave](#).

bp.sp805_wdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus

transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.sp805_wdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.sp805_wdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.sp805_wdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.sp810_sysctrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.

Type: [SP810_SysCtrl](#).

bp.sp810_sysctrl.busslave

Type: [PVBUSlave](#).

bp.sp810_sysctrl.clkdiv_clk0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk2

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sp810_sysctrl.clkdiv_clk3

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.sram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.sram.bus_slave

Type: [PVBUSSlave](#).

bp.terminal_0

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_1

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_2

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.terminal_3

Telnet terminal interface.

Type: [TelnetTerminal](#).

bp.trusted_key_storage

Trusted Root-Key Storage unit.

Type: [RootKeyStorage](#).

bp.trusted_key_storage.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_nv_counter

Trusted Non-Volatile Counter unit.

Type: [NonVolatileCounter](#).

bp.trusted_nv_counter.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_rng

Random Number Generator unit.

Type: [RandomNumberGenerator](#).

bp.trusted_rng.pvbusslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog

ARM Watchdog Module(SP805).

Type: [SP805_Watchdog](#).

bp.trusted_watchdog.busslave

Type: [PVBUSSlave](#).

bp.trusted_watchdog.clocktimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.trusted_watchdog.clocktimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.trusted_watchdog.clocktimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.trusted_watchdog.clocktimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.tzc_400

TrustZone Address Space Controller.

Type: [TzC_400](#).

bp.tzc_400.apbslave[0]

Type: [PVBUSSlave](#).

bp.tzc_400.filter0

Type: [filter0](#).

bp.tzc_400.filter0.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter1

Type: [filter1](#).

bp.tzc_400.filter1.BusMapper

Type: [PVBUSMapper](#).

bp.tzc_400.filter2
Type: `filter2`.

bp.tzc_400.filter2.BusMapper
Type: `PVBusMapper`.

bp.tzc_400.filter3
Type: `filter3`.

bp.tzc_400.filter3.BusMapper
Type: `PVBusMapper`.

bp.utility_bus_map0
Type: `PVBusMapper`.

bp.utility_bus_map1
Type: `PVBusMapper`.

bp.utility_bus_map2
Type: `PVBusMapper`.

bp.utility_bus_map3
Type: `PVBusMapper`.

bp.ve_sysregs
Type: `VE_SysRegs`.

bp.ve_sysregs.busslave
Type: `PVBusSlave`.

bp.vedcc
Daughterboard Configuration Control (DCC).
Type: `VEDCC`.

bp.virtio_net
VirtioNet device over MMIO transport.
Type: `VirtioNetMMIO`.

bp.virtio_net.dma_master
Type: `PVBusMaster`.

bp.virtio_net_labeller
Type: `Labeller`.

bp.virtio_net_labeller.pvbusmodifier
Type: `PVBusMapper`.

bp.virtio_rng
VirtioEntropy device over MMIO transport.
Type: `virtioEntropyMMIO`.

bp.virtio_rng.dma_master
Type: `PVBusMaster`.

bp.virtioblockdevice

VirtioBlock device over MMIO transport.

Type: `virtioBlockMMIO`.

bp.virtioblockdevice.dma_master

Type: `PVBusMaster`.

bp.virtioblockdevice_labeller

Type: `Labeller`.

bp.virtioblockdevice_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.virtiop9device

virtio P9 server.

Type: `VirtioP9Device`.

bp.virtiop9device.mmio_slave

Type: `PVBusSlave`.

bp.virtiop9device.virtio_master

Type: `PVBusMaster`.

bp.virtiop9device_labeller

Type: `Labeller`.

bp.virtiop9device_labeller.pvbusmodifier

Type: `PVBusMapper`.

bp.vis

Display window for VE using Visualisation library.

Type: `VEVisualisation`.

bp.vis.recorder

Event recorder component for visualisation component (allows to playback and record interactive GUI sessions).

Type: `VisEventRecorder`.

bp.vis.recorder.playbackDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: `ClockDivider`.

bp.vis.recorder.playbackTimer

A ClockTimerThread(64) is a drop-in replacement for a ClockTimer(64) component. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This means that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread](#).

bp.vis.recorder.playbackTimer.timer

A ClockTimerThread64 is a drop-in replacement for ClockTimer64. The main difference to the ClockTimer component is that the ClockTimerThread runs the signal() callback from a proper scheduler thread. This mean that the signal() function may directly or indirectly invoke wait() functions to wait for time or events. This is not allowed for the ClockTimer component which does not use a thread. Components which issue bus transactions from within the timer signal() callback must use ClockTimerThread(64) rather than ClockTimer(64).

Type: [ClockTimerThread64](#).

bp.vis.recorder.playbackTimer.timer.thread

A SchedulerThread instance represents a co-routine thread in the simulation.

Type: [SchedulerThread](#).

bp.vis.recorder.playbackTimer.timer.thread_event

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on.

Type: [SchedulerThreadEvent](#).

bp.vis.recorder.recordingDivider

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

bp.vram

RAM device, can be dynamic or static ram.

Type: [RAMDevice](#).

bp.vram.bus_slave

Type: [PVBusSlave](#).

cci550

This is a cache coherent interconnect.

Type: [CCI550](#).

cci550.pvbus_register_file_s[0]

Type: [PVBusSlave](#).

cci550.upstream[0]

Type: [PVBusSlave](#).

cci550.upstream[1]

Type: [PVBusSlave](#).

cci550.upstream[2]

Type: [PVBusSlave](#).

cci550.upstream[3]

Type: [PVBusSlave](#).

cci550.upstream[4]

Type: [PVBusSlave](#).

cci550.upstream[5]

Type: [PVBusSlave](#).

cci550.upstream[6]

Type: [PVBusSlave](#).

clockdivider0

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

clockdivider1

A ClockDivider is a library component that takes a ClockSignal on its input port (which could come from the output of a MasterClock, or from another ClockDivider), and generates a new ClockSignal on its output port, representing a clock frequency that is related to the input clock by the ratio of the multiply and divide parameters.

Type: [ClockDivider](#).

cluster0

ARM AEMvA Cluster CT model.

Type: [Cluster_ARM_AEM-A_MP](#).

cluster0.AMU

Type: [PVBusLogger](#).

cluster0.AMU.mapper

Type: [PVBusMapper](#).

cluster0.DAP

Type: [PVBusLogger](#).

cluster0.DAP.mapper

Type: [PVBusMapper](#).

cluster0.DSU

Type: [DSU](#).

cluster0.DSU.mpam_busslave

Type: [PVBusSlave](#).

cluster0.MMAP

Type: [PVBusLogger](#).

cluster0.MMAP.mapper

Type: [PVBusMapper](#).

cluster0.acp_mapper

Type: [PVBusMapper](#).

cluster0.cpu0

ARM AEM-A MP CT model.

Type: [ARM_AEM-A_MP](#).**cluster0.cpu0.UTLB**

Type: TLB.

cluster0.cpu0.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

cluster0.cpu0.gicv3_cpu_if

Type: GICv3CPUInterface.

cluster0.cpu0.l1dcache

PV Cache.

Type: pVCache.

cluster0.cpu0.l1dcache.upstream[0]Type: [PVBusSlave](#).**cluster0.cpu0.l1icache**

PV Cache.

Type: pVCache.

cluster0.cpu0.l1icache.upstream[0]Type: [PVBusSlave](#).**cluster0.cpu1**

ARM AEM-A MP CT model.

Type: [ARM_AEM-A_MP](#).**cluster0.cpu1.UTLB**

Type: TLB.

cluster0.cpu1.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

cluster0.cpu1.gicv3_cpu_if

Type: GICv3CPUInterface.

cluster0.cpu1.l1dcache

PV Cache.

Type: pVCache.

cluster0.cpu1.l1dcache.upstream[0]Type: [PVBusSlave](#).**cluster0.cpu1.l1icache**

PV Cache.

Type: pVCache.

cluster0.cpu1.l1icache.upstream[0]

Type: [PVBUSSlave](#).

cluster0.cpu2

ARM AEM-A MP CT model.

Type: [ARM_AEM-A_MP](#).

cluster0.cpu2.UTLB

Type: TLB.

cluster0.cpu2.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

cluster0.cpu2.gicv3_cpu_if

Type: GICv3CPUInterface.

cluster0.cpu2.l1dcache

PV Cache.

Type: [PVCache](#).

cluster0.cpu2.l1dcache.upstream[0]

Type: [PVBUSSlave](#).

cluster0.cpu2.l1icache

PV Cache.

Type: [PVCache](#).

cluster0.cpu2.l1icache.upstream[0]

Type: [PVBUSSlave](#).

cluster0.cpu3

ARM AEM-A MP CT model.

Type: [ARM_AEM-A_MP](#).

cluster0.cpu3.UTLB

Type: TLB.

cluster0.cpu3.dtlb

TLB - instruction, data or unified.

Type: TlbCadi.

cluster0.cpu3.gicv3_cpu_if

Type: GICv3CPUInterface.

cluster0.cpu3.l1dcache

PV Cache.

Type: [PVCache](#).

cluster0.cpu3.l1dcache.upstream[0]

Type: [PVBUSSlave](#).

cluster0.cpu3.l1icache

PV Cache.

Type: `PVCache`.

`cluster0.cpu3.l1icache.upstream[0]`
Type: `PVBusSlave`.

`cluster0.ext_bus`
Type: `PVBusLogger`.

`cluster0.ext_bus.mapper`
Type: `PVBusMapper`.

`cluster0.gic_cpuif_decoder_cluster`
Type: `GICv3CPUInterfaceDecoder`.

`cluster0.l2_cache`
PV Cache.
Type: `PVCache`.

`cluster0.l2_cache.upstream[0]`
Type: `PVBusSlave`.

`cluster0.l2_cache.upstream[10]`
Type: `PVBusSlave`.

`cluster0.l2_cache.upstream[11]`
Type: `PVBusSlave`.

`cluster0.l2_cache.upstream[12]`
Type: `PVBusSlave`.

`cluster0.l2_cache.upstream[13]`
Type: `PVBusSlave`.

`cluster0.l2_cache.upstream[14]`
Type: `PVBusSlave`.

`cluster0.l2_cache.upstream[15]`
Type: `PVBusSlave`.

`cluster0.l2_cache.upstream[16]`
Type: `PVBusSlave`.

`cluster0.l2_cache.upstream[1]`
Type: `PVBusSlave`.
